1 science park boston ma 02114: *Teach to Work* Patty Alper, 2017-03-27 The United States is abundantly rich in adults with know how. By connecting mentors -- educated adults with expertise and knowledge -- with mentees -- teens and young adults who lack motivation, experience, and role models in their lives -- we can begin to close this gap dramatically. We can prepare the next generation for the jobs of tomorrow by adding real-world, project based experience to their education. Teach to Work is a call to action for mentors currently sitting on the sidelines. Whether you are a banker, lawyer, architect, accountant, engineer, IT specialist, or artist, you have the experience and skillset to become an ambassador of talent, grit, and transferable skills. The book provides a step-by-step guide to help professionals share their knowledge with the next generation of workers through this intergenerational experience. Based on Alper’s fifteen years of mentoring inner-city high-school students, Teach to Work proves how corporations, professionals, and boomers can have a significant impact on the professional future of America’s youth. Drawing from real-life stories and letters received from students, teachers, and fellow mentors describing pride of accomplishment, Alper helps professionals embark on this journey to transform lives, mentoring one student at a time.

1 science park boston ma 02114: Accessible Vacations Simon J. Hayhoe, 2020-10-23 Having vision and hearing loss, or difficulties learning, remembering or getting around needn’t stop us enjoying vacations to cultural places, either in our local cities or someone else’s. Accessible Vacations is a problem-solving guide book on the most accessible museums, monuments and theaters for vacation visits or day-trips in twelve of the US’s most visited cities. It describes

accessible outings, activities, courses and exhibitions you may want to try out, and places to go and see great shows or movies using a simple five-step plan. Accessible Vacations is not exhaustive and won't sell you a hotel room or flight. It also won't tell you about diners in the local area, or the best souvenirs. It's written in the hope of making your life easier and more interesting in your leisure time, or to help in getting a cultural education. It also gives you a realistic, accessible picture of what's available in the US when you choose your destinations. Whether it's viewing paintings, watching musicals or walking trails, Accessible Vacations will show you that you can learn, find pleasure, develop personal interests, or build a life journey in the US's biggest cities. You just need to know where to go to make these activities possible, or how cultural places can help support you as elderly and frail folk. If you are a museum or theater professional, it will also let you know the state of the art in the US, and which cities have the most accessible places. Accessible Vacations is in two main sections: •Section 1 includes ways you can get access to museums and theaters if you have problems with vision or hearing loss or difficulties with memory or learning, and includes information on: technologies, audio description, captions, special classes and performances, sign language, accessible mobile technologies. •Section 2 has a chapter each for a dozen big, accessible US cities, with listings of facilities for museums and theaters using this book's five-step plan. These cities were chosen because they are amongst the most visited in the US, they are spread throughout the country and they are the home of important cultural places that represent this country so well. They are also a mix of young and old cities, centres of the arts, different forms of art and centres of business. They include the east and west seaboards and the states of the north and south as well as the Mid-West.

1 science park boston ma 02114: Global Perspectives of Nanoscience and Engineering Education Kurt Winkelmann, Bharat Bhushan, 2016-06-28 This book presents the perspectives of nanotechnology educators from around the world. Experts present the pressing challenges of teaching nanoscience and engineering to students in all levels of education, postsecondary and informal environments. The book was inspired by the 2014 NSF workshop for Nanoscience and Engineering Education. Since nanotechnology is a relatively new field, authors present recommendations for designing nanotechnology education programs. The chapters describe methods to teach specific topics, such as probe microscopy, size and scale, and nanomaterial safety, in classrooms around the world. Other chapters describe the ways that organizations like NNIN and the NISE Network have influenced informal nanotechnology education. Information technology plays a growing role in all types of education and several chapters are devoted to describing ways how educators can use online curricula for teaching nanotechnology to students from preschool to graduate school.
