What is 10 Pass Ozone Therapy?

10 pass ozone therapy is a form of autohemotherapy that involves the extracorporeal treatment of a patient's blood with ozone gas. The term "10 pass" refers to the process of circulating the blood through an ozone generator and back into the patient's bloodstream ten times during a single session. This method is distinct from traditional ozone therapy methods due to the repetitive cycling of blood ozonation, which enhances the therapeutic impact. Developed as an advanced technique, 10 pass ozone therapy aims to maximize the oxygen and ozone exposure to the blood, promoting detoxification and improved cellular function. This therapy is typically administered in specialized clinics by trained healthcare professionals.

How 10 Pass Ozone Therapy Works

The mechanism of 10 pass ozone therapy involves drawing blood from the patient, mixing it with medical-grade ozone gas, and then reinfusing the ozonated blood back into the circulatory system. This process is repeated ten times, hence the name. The ozone molecule (O_3) is a powerful oxidizing agent that interacts with various components in the blood, including lipids and proteins, to generate reactive oxygen species. These reactive species stimulate antioxidant defenses, improve oxygen metabolism, and modulate the immune response.

Step-by-Step Process

The therapy follows a structured sequence to ensure safety and efficacy:

1. Blood is withdrawn from the patient into a sterile, closed-circuit system.
2. The blood is exposed to a precisely calibrated concentration of ozone gas.
3. The ozonated blood is reinfused into the patient.

4. This cycle is repeated ten times during one session.
5. Throughout the process, vital signs and patient comfort are monitored.

Physiological Effects of Ozone on Blood

Ozone therapy induces mild oxidative stress, which triggers adaptive responses in the body. This includes increased production of antioxidant enzymes such as superoxide dismutase and glutathione peroxidase. Additionally, ozone enhances oxygen release from hemoglobin, improves microcirculation, and activates immune cells. These effects collectively contribute to improved cellular metabolism and detoxification.

Benefits of 10 Pass Ozone Therapy

10 pass ozone therapy offers a broad spectrum of health benefits due to its multifaceted action on the body's systems. The enhanced blood ozonation process facilitates more efficient oxygen delivery and toxin removal.

Key Therapeutic Advantages

- **Detoxification:** Promotes the elimination of harmful substances and metabolic waste products.
- **Immune Modulation:** Enhances the body's innate and adaptive immune responses.
- **Improved Circulation:** Increases red blood cell flexibility and oxygen transport capacity.
- **Anti-Inflammatory Effects:** Reduces systemic inflammation through modulation of cytokine

production.

- **Enhanced Energy Production:** Stimulates mitochondrial function for better cellular energy output.

Potential Impact on Chronic Conditions

Patients suffering from chronic infections, autoimmune diseases, and cardiovascular disorders may experience symptomatic relief and improved quality of life following 10 pass ozone therapy. Research also suggests benefits in managing conditions related to oxidative stress and impaired oxygen utilization.

Procedure and Equipment Used

The 10 pass ozone therapy procedure requires specialized equipment to ensure precise ozone concentration and sterile blood handling. The therapy is performed under controlled medical environments to guarantee safety and efficacy.

Ozone Generator Specifications

Medical-grade ozone generators used for 10 pass therapy produce ozone by electrically charging pure oxygen. These devices are calibrated to deliver ozone at concentrations typically ranging from 20 to 40 micrograms per milliliter, depending on the treatment protocol. The equipment includes:

- Closed-circuit ozone blood treatment system
- Sterile blood bags and tubing
- Oxygen supply with appropriate purity standards

- Monitoring devices for patient vitals

Session Duration and Frequency

A single 10 pass ozone therapy session generally lasts between 30 to 60 minutes, depending on the volume of blood treated and patient tolerance. Treatment plans vary but often involve multiple sessions over several weeks to achieve optimal therapeutic outcomes.

Safety and Side Effects

10 pass ozone therapy is considered safe when performed by trained medical professionals using approved equipment and protocols. However, as with any medical procedure, there are potential risks and side effects to consider.

Common Side Effects

Mild side effects may include:

- Temporary fatigue or dizziness
- Localized discomfort at the injection site
- Headache or mild nausea

Precautions and Contraindications

Contraindications for 10 pass ozone therapy include pregnancy, severe anemia, hyperthyroidism, and glucose-6-phosphate dehydrogenase (G6PD) deficiency. It is essential to conduct a thorough medical evaluation before initiating treatment. Strict adherence to sterile technique is mandatory to prevent infection or contamination.

Conditions Treated with 10 Pass Ozone Therapy

The versatility of 10 pass ozone therapy allows it to be applied in managing a variety of medical conditions that benefit from improved oxygenation, immune support, and detoxification.

Common Indications

- Chronic viral and bacterial infections
- Autoimmune diseases such as rheumatoid arthritis
- Peripheral artery disease and cardiovascular disorders
- Fibromyalgia and chronic fatigue syndrome
- Detoxification from environmental toxins

Emerging Applications

Ongoing research is exploring the potential of 10 pass ozone therapy in oncology support, neurodegenerative diseases, and metabolic syndrome. While promising, these applications require

further clinical validation.

10 pass ozone therapy: Oxygen-Ozone Therapy V. Bocci, 2013-06-29 When I was about fifteen, my Biological Sciences teacher, Prof. N. Benacchio, lent me a book by Paul de Kruif The Microbe Hunters and I remained fascinated by infectious diseases. I was intrigued by the potency of virulent bacteria which are constantly trying to invade our bodies and often overcome what today we call innate and adoptive immunity. Indeed, shortly after that, I was struck by his tragic death due to peritonitis. Later, while studying medicine (although medical knowledge in the 1950s was almost primordial compared with today), I soon realised how the various biological systems were wonderfully organised but at the same time frail and how our life could end in a few minutes. Slowly it became obvious that our wellness was the result of a dynamic and very unstable equilibrium between health and disease. This unstable equilibrium could be broken forever if the body's response could not reverse the pathological state. I stuck a sort of poster on the wall of my room with these three words and connecting arrows: HEALTH ~ -? DISEASE -? DEATH As I don't believe in another world after death, it became obvious to me that we should make every possible effort not only to delay death, but to try always to shift the equilibrium to the left. In this book, I will try to show that this can be achieved, as a last resort, even with ozonotherapy.

10 pass ozone therapy: The Living Cleanse Case Adams, 2024-01-31 With the bombarding of our bodies by thousands of environmental and consumer toxins every day, most of us have realized we need to incorporate cleansing and detoxification strategies in order to maintain health. In fact, numerous health disorders have now been attributed to synthetic and environmental toxins, including cancers, respiratory diseases, joint degeneration, digestive issues, skin issues, cognitive difficulties and so many other conditions. The question now is; how do we efficiently and effectively cleanse the overload of toxins from our bodies? Many recommend radical and difficult detoxification programs that can actually do more harm than good. These can stress our elimination systems and immune systems, and overwhelm us with toxemia. These “blitz” methods of cleansing can not only be unsafe: Most are also unsustainable due to their complexity, expense and regimented sacrifices. The author – a California Naturopath and board certified Alternative Medical Practitioner – offers us a completely different strategy – one that is not only safe, gentle and gradual – but sustainable throughout our lifetime. The Living Cleanse is a groundbreaking sustainable system that will stimulate our immune system to more efficiently break down and rid the body of toxins without over-stressing our bodies and minds – or require radical, difficult, expensive and possibly unsafe methods.

10 pass ozone therapy: OZONE A New Medical Drug Velio Bocci, 2007-07-18 Oxygen-ozone therapy is a complementary approach less known than homeopathy and acupuncture because it has come of age only three decades ago. This book clarifies that, in the often nebulous field of natural medicine, the biological bases of ozone therapy are totally in line with classic biochemical, physiological and pharmacological knowledge. Ozone is an oxidising molecule, a sort of superactive oxygen, which, by reacting with blood components, generates a number of chemical messengers responsible for activating crucial biological functions such as oxygen delivery, immune activation, release of hormones and induction of antioxidant enzymes, which is an exceptional property for correcting the chronic oxidative stress present in atherosclerosis, diabetes, infections and cancer. Moreover ozone therapy, by inducing nitric oxide synthase, may mobilize endogenous stem cells, which will promote regeneration of ischaemic tissues. The description of these phenomena offers the first comprehensive picture for understanding how ozone works and why, when properly used as a real drug within the therapeutic range, not only does not procure adverse effects but yields a feeling of wellness. Half of the book describes the value of ozone therapy in several diseases, particularly cutaneous infections and vascular diseases where ozone really behaves as a wonder drug. The book has been written for clinical researchers, physicians and ozonetherapists but also for the layman or the patient interested in this therapy.
