Fuse Box Locations in the 2003 Grand Marquis

The 2003 Grand Marquis features two primary fuse box locations: the interior fuse panel and the engine compartment fuse box. Each location serves different sets of circuits based on the components they protect.

Interior Fuse Panel

The interior fuse panel is located beneath the dashboard on the driver's side. This panel contains fuses related to interior vehicle functions such as the power windows, radio, dome lights, and other cabin electrical systems. Accessing this panel is straightforward, usually requiring the removal of a plastic cover. The inside of the cover often includes a simplified fuse box diagram, indicating fuse positions and their respective functions.

Engine Compartment Fuse Box

The engine compartment fuse box is situated near the battery, typically on the driver's side of the engine bay. This box contains fuses and relays that control vital engine and powertrain systems, including the fuel pump, ignition system, cooling fans, and headlights. Due to exposure to heat and moisture, this fuse box is designed to be weather-resistant and sealed to protect its components. The cover of this fuse box also features a detailed diagram outlining the fuse layout and amperage values.
