

# 200 technology square cambridge

**200 technology square cambridge** stands as a prominent landmark in the heart of Cambridge, Massachusetts, representing a hub of innovation and technological advancement. This building is strategically located within the Kendall Square area, known for its concentration of tech companies, startups, and research institutions. The site serves as an ideal environment for collaboration among technology firms, biotech companies, and academic researchers. With its modern facilities and prime location, 200 Technology Square Cambridge attracts a diverse range of tenants, fostering a vibrant ecosystem of innovation. This article delves into the significance of 200 Technology Square Cambridge, exploring its architectural features, tenant profile, accessibility, and role within the Cambridge technology landscape. The comprehensive overview aims to provide insight into why 200 Technology Square Cambridge is a key player in the region's technology and business sectors.

- Location and Accessibility of 200 Technology Square Cambridge
- Architectural Design and Facilities
- Tenant Profile and Industry Presence
- The Role of 200 Technology Square in Cambridge's Innovation Ecosystem
- Nearby Amenities and Community Engagement

## Location and Accessibility of 200 Technology Square Cambridge

200 Technology Square Cambridge is situated in Kendall Square, an area globally recognized as one of the most innovative clusters for technology and biotechnology. This prime location offers immediate proximity to prestigious institutions such as the Massachusetts Institute of Technology (MIT), making it a sought-after address for companies seeking collaboration with academic research. The building benefits from excellent transportation links, including access to the Massachusetts Bay Transportation Authority (MBTA) Red Line at Kendall/MIT station, facilitating convenient commutes for employees and visitors.

The accessibility of 200 Technology Square Cambridge extends beyond public transit. It is easily reachable by major roadways and offers bicycle-friendly routes, aligning with Cambridge's emphasis on sustainable transportation. The location's connectivity enhances its appeal to companies requiring seamless access to Boston's financial district and Logan International Airport, approximately a 15-minute drive away. This strategic positioning supports the dynamic flow of talent, goods, and services essential to the technology sector's growth.

## Proximity to Major Research Institutions

One of the key advantages of 200 Technology Square Cambridge is its close

relationship with world-renowned research institutions. Being adjacent to MIT allows tenants to leverage cutting-edge research, access a pool of skilled graduates, and engage in joint ventures. This proximity fosters a collaborative environment that encourages innovation and technological breakthroughs.

## **Transportation Options**

The building's accessibility is supported by multiple transportation modes, including:

- MBTA Red Line at Kendall/MIT station
- Bus routes servicing Cambridge and Boston
- Bike-sharing programs
- Car-sharing and parking facilities

These options ensure that employees and visitors can commute efficiently, contributing to the building's attractiveness as a business location.

## **Architectural Design and Facilities**

200 Technology Square Cambridge is distinguished by its modern architectural design that emphasizes functionality, sustainability, and technological integration. The building features state-of-the-art infrastructure tailored to meet the demanding needs of tech and biotech companies. High ceilings, open floor plans, and abundant natural light create an optimal working environment that promotes productivity and collaboration.

Incorporating green building practices, 200 Technology Square Cambridge includes environmentally friendly elements such as energy-efficient systems and sustainable materials. The building's design supports advanced laboratory spaces as well as traditional office environments, making it versatile enough to accommodate a wide range of tenants.

## **Building Specifications**

The building offers:

- Flexible office layouts adaptable to different business sizes
- Laboratory facilities equipped for biotech and pharmaceutical research
- High-speed internet and advanced communications infrastructure
- On-site amenities such as conference rooms, fitness centers, and cafes

## **Sustainability Features**

200 Technology Square incorporates green technologies, including energy-efficient HVAC systems, water-saving fixtures, and waste reduction programs. These features align with Cambridge's commitment to environmental sustainability and help tenants reduce their carbon footprint.

## **Tenant Profile and Industry Presence**

The tenant mix at 200 Technology Square Cambridge is diverse, comprising technology startups, established software firms, biotech companies, and research-driven organizations. This blend of tenants creates a dynamic environment where cross-industry collaboration can thrive. Many tenants benefit from the building's proximity to academic institutions and venture capital firms, which support innovation and business growth.

The presence of leading-edge companies in artificial intelligence, biotechnology, software development, and clean energy reflects the building's role as a center for cutting-edge technology. The tenant roster includes both emerging firms and global corporations, ensuring a rich mix of expertise and resources.

## **Key Industries Represented**

Industries with a strong presence at 200 Technology Square Cambridge include:

- Biotechnology and pharmaceutical research
- Information technology and software development
- Clean energy and environmental technology
- Artificial intelligence and machine learning
- Advanced manufacturing and robotics

## **Benefits to Tenants**

Tenants at 200 Technology Square benefit from:

- Access to cutting-edge laboratory and office spaces
- Networking opportunities within a tech-focused community
- Proximity to venture capital and funding sources
- Collaborative atmosphere with academic and industry leaders

# **The Role of 200 Technology Square in Cambridge's Innovation Ecosystem**

200 Technology Square Cambridge plays a crucial role in supporting the innovation ecosystem of Cambridge by providing a collaborative space where technology, science, and business converge. The building contributes to the city's reputation as a global hub for technological advancement and entrepreneurship. Its tenants participate actively in knowledge sharing, joint research projects, and commercialization of new technologies.

By hosting a variety of organizations focused on research and development, 200 Technology Square fosters synergies that accelerate innovation cycles. This environment helps bring new products and technologies to market more efficiently, benefiting the regional economy and the broader technology landscape.

## **Collaboration and Networking Opportunities**

The building's design and tenant mix facilitate frequent networking events, workshops, and seminars. These activities enable companies to connect, share expertise, and form strategic partnerships that drive innovation forward.

## **Support for Startups and Entrepreneurs**

200 Technology Square Cambridge also supports emerging startups by providing flexible leasing options and access to resources such as mentorship programs and funding networks. This support framework encourages entrepreneurship and helps new companies establish themselves in a competitive market.

## **Nearby Amenities and Community Engagement**

The surrounding area of 200 Technology Square Cambridge offers numerous amenities that enhance the work-life balance for employees and contribute to a vibrant community atmosphere. Kendall Square is home to a variety of restaurants, cafes, retail shops, and recreational venues that cater to diverse tastes and preferences.

Community engagement is also a priority, with the building and its tenants participating in local initiatives that promote education, sustainability, and social responsibility. These activities strengthen the connection between the technology sector and the broader Cambridge community.

### **Local Amenities**

Nearby amenities include:

- Restaurants featuring diverse cuisines
- Coffee shops and casual dining options
- Fitness centers and wellness facilities
- Parks and outdoor spaces for relaxation

- Retail stores and service providers

## **Community Programs and Sustainability Initiatives**

Tenants and management at 200 Technology Square Cambridge actively participate in:

- Local educational outreach and STEM programs
- Environmental sustainability projects
- Charitable events and volunteer opportunities
- Collaborations with city government on urban development

## **Frequently Asked Questions**

### **What is 200 Technology Square in Cambridge known for?**

200 Technology Square in Cambridge is known as a premier office building housing numerous technology companies, startups, and research organizations, particularly in the fields of biotechnology and information technology.

### **Which companies are located at 200 Technology Square, Cambridge?**

200 Technology Square hosts a variety of companies, including tech startups, biotech firms, and research institutions. Notable tenants have included companies like IBM Research and other innovation-driven enterprises.

### **What amenities are available at 200 Technology Square, Cambridge?**

The building offers amenities such as high-speed internet, modern office spaces, conference facilities, on-site parking, and proximity to public transportation, making it convenient for tenants and visitors.

### **How accessible is 200 Technology Square via public transportation?**

200 Technology Square is highly accessible via public transit, located near the Kendall/MIT subway station on the MBTA Red Line, as well as several bus routes, facilitating easy commutes for employees and visitors.

### **What kind of research and development occurs at 200**

## Technology Square?

The building hosts companies and labs focused on cutting-edge research and development in areas like biotechnology, software development, data science, and other advanced technologies.

## Is 200 Technology Square environmentally sustainable?

Many tenants and the building management emphasize sustainability, and the building incorporates energy-efficient systems and green building practices to reduce environmental impact.

## Are there any recent renovations or upgrades at 200 Technology Square?

In recent years, 200 Technology Square has undergone upgrades to modernize office spaces, enhance networking infrastructure, and improve common areas to meet the evolving needs of technology companies and their employees.

## Additional Resources

### 1. *Innovation Hubs: The Rise of 200 Technology Square, Cambridge*

This book explores the development of 200 Technology Square as a focal point for innovation and technology in Cambridge. It delves into the history of the building, the companies that have thrived there, and the impact on the local tech ecosystem. Readers gain insight into how physical spaces can drive technological breakthroughs and collaboration.

### 2. *Biotech Breakthroughs at 200 Technology Square*

Focusing on the biotechnology firms housed at 200 Technology Square, this book highlights key scientific advancements and entrepreneurial stories. It covers how startups and established companies leverage the location's resources and networking opportunities to push the boundaries of medical research and development. The narrative includes interviews with leading scientists and innovators.

### 3. *Tech Startups and Entrepreneurship in Cambridge's 200 Technology Square*

This title offers an in-depth look at the startup culture within 200 Technology Square, emphasizing entrepreneurial challenges and successes. It discusses funding strategies, mentorship programs, and the role of the Cambridge innovation community. Aspiring entrepreneurs will find practical advice and inspiring case studies.

### 4. *The Architecture and Design of 200 Technology Square*

An architectural perspective on one of Cambridge's iconic technology buildings, this book examines the design principles behind 200 Technology Square. It covers the building's construction, sustainability features, and how its layout fosters collaboration among tenants. The book also situates the building within the broader context of Cambridge's urban development.

### 5. *Collaborative Innovation: How 200 Technology Square Shapes Tech Partnerships*

This book investigates the collaborative environment at 200 Technology Square, showcasing how shared spaces lead to innovative partnerships. It includes examples of cross-company projects in tech and biotech sectors, underscoring the importance of proximity and networking. The work highlights

the building as a microcosm of modern innovation ecosystems.

6. *From Lab to Market: Commercializing Science at 200 Technology Square*

Detailing the journey of scientific discoveries from research labs to commercial products, this book focuses on companies within 200 Technology Square. It discusses technology transfer, intellectual property management, and the challenges of bringing innovations to market. The book offers insights for scientists and business professionals alike.

7. *Digital Transformation and AI Development at 200 Technology Square*

This title explores the role of 200 Technology Square in advancing artificial intelligence and digital technologies. It profiles key AI startups and research groups, examining how the building supports cutting-edge developments in machine learning and data science. The book also addresses the ethical and societal implications of these technologies.

8. *Investing in Innovation: Venture Capital and Funding at 200 Technology Square*

Focused on the financial side of technology development, this book delves into the venture capital landscape surrounding 200 Technology Square. It highlights success stories of funded startups, investment trends, and advice for securing funding in the competitive Cambridge tech scene. Readers gain a comprehensive understanding of the economic engine behind innovation hubs.

9. *The Future of Technology Parks: Lessons from 200 Technology Square, Cambridge*

Looking ahead, this book analyzes how 200 Technology Square serves as a model for future technology parks worldwide. It discusses emerging trends in workspace design, tenant mix, and community building. The book offers recommendations for policymakers, developers, and tech leaders aiming to cultivate vibrant innovation districts.

**200 technology square cambridge:** *Advances in Neural Information Processing Systems 15*  
Suzanna Becker, Sebastian Thrun, Klaus Obermayer, 2003 Proceedings of the 2002 Neural Information Processing Systems Conference.

**200 technology square cambridge:** *Directory of Corporate Counsel, Spring 2024 Edition*

**200 technology square cambridge:** *Hybrid Systems: Computation and Control* Oded Maler, Amir Pnueli, 2003-03-18 This book constitutes the refereed proceedings of the 6th International Workshop on Hybrid Systems: Computation and Control, HSCC 2003, held in Prague, Czech Republic, in April 2003. The 36 revised full papers presented were carefully reviewed and selected from 75 submissions. All current issues in hybrid systems are addressed including formal methods for analysis and control, computational tools, as well as innovative applications in various fields such as automotive control, the immune system, electrical circuits, operating systems, and human brains.

**200 technology square cambridge: Hybrid Systems: Computation and Control** Freek Wiedijk, Oded Maler, Amir Pnueli, 2003-07-01 This volume contains the proceedings of the Sixth Workshop on Hybrid Systems: Computation and Control (HSCC 2003), which was held in Prague, during April 3-5, 2003. The Hybrid Systems workshops attract researchers interested in the modeling, analysis, control, and implementation of systems which involve the interaction of both discrete and continuous state dynamics. The newest results and latest developments in hybrid system models, formal methods for analysis and control, computational tools, as well as new applications and examples are presented at these annual meetings. The Sixth Workshop continued the series of workshops held in Grenoble, France (HART'97), Berkeley, California, USA (HSCC'98), Nijmegen, The Netherlands (HSCC'99), Pittsburgh, Pennsylvania, USA (HSCC 2000), Rome, Italy (HSCC 2001), and Stanford, California, USA (HSCC 2002). Proceedings of these workshops have been published by Springer-Verlag in the Lecture Notes in Computer Science (LNCS) series. This year we assembled a technical program committee with a broad expertise in formal methods in computer science, control theory, applied mathematics, and artificial intelligence. We received a set of 75 high-quality submitted papers. After detailed review and discussion of these papers by the program committee, 36 papers were accepted for presentation at the workshop, and the final versions of these papers appear in this volume.

**200 technology square cambridge: Algorithms - ESA 2002** Rolf Möhring, Rajeev Raman, 2003-08-02 This volume contains the 74 contributed papers and abstracts of 4 of the 5 invited talks presented at the 10th Annual European Symposium on Algorithms (ESA 2002), held at the University of Rome "La Sapienza", Rome, Italy, 17-21 September, 2002. For the first time, ESA had two tracks, with separate program committees, which dealt respectively with: - the design and mathematical analysis of algorithms (the "Design and Analysis" track); - real-world applications, engineering and experimental analysis of algorithms (the "Engineering and Applications" track). Previous ESAs were held in Bad Honnef, Germany (1993); Utrecht, The Netherlands (1994); Corfu, Greece (1995); Barcelona, Spain (1996); Graz, Austria (1997); Venice, Italy (1998); Prague, Czech Republic (1999); Saarbrücken, Germany (2000), and Aarhus, Denmark (2001). The predecessor to the Engineering and Applications track of ESA was the Annual Workshop on Algorithm Engineering (WAE). Previous WAEs were held in Venice, Italy (1997), Saarbrücken, Germany (1998), London, UK (1999), Saarbrücken, Germany (2000), and Aarhus, Denmark (2001). The proceedings of the previous ESAs were published as Springer LNCS volumes 726, 855, 979, 1284, 1461, 1643, 1879, and 2161. The proceedings of WAEs from 1999 onwards were published as Springer LNCS volumes 1668, 1982, and 2161.

**200 technology square cambridge: Exploring Artificial Intelligence in the New Millennium** Gerhard Lakemeyer, Bernhard Nebel, 2003 This guide is a unique presentation of the spectrum of ongoing research in Artificial Intelligence. An ideal collection for personal reference or for use in introductory courses in AI and its subfields, Exploring Artificial Intelligence in the New Millennium is essential reading for anyone interested in the intellectual and technological challenges of AI.

**200 technology square cambridge: Discrete Geometry** Andras Bezdek, 2003-02-04 Celebrating the work of Professor W. Kuperberg, this reference explores packing and covering theory, tilings, combinatorial and computational geometry, and convexity, featuring an extensive collection of problems compiled at the Discrete Geometry Special Session of the American Mathematical Society in New Orleans, Louisiana. Discrete Geometry analyzes packings and coverings with congruent convex bodies, arrangements on the sphere, line transversals, Euclidean and spherical tilings, geometric graphs, polygons and polyhedra, and fixing systems for convex figures. This text also offers research and contributions from more than 50 esteemed international authorities, making it a valuable addition to any mathematical library.

**200 technology square cambridge: Peer-to-Peer Systems II** Frans Kaashoek, Ion Stoica, 2003-08-21 In very short time, peer-to-peer computing has evolved from an attractive new paradigm into an exciting and vibrant research field bringing together researchers from systems, networking,

and theory. This book constitutes the thoroughly refereed post-proceedings of the Second International Workshop on Peer-to-Peer Systems, IPTPS 2003, held in Berkeley, CA, USA in February 2003. The 27 revised papers presented together with an introductory summary of the discussions at the workshop were carefully selected during two rounds of reviewing and revision from initially 166 submissions. The papers are organized in topical sections on experience with P2P; theory and algorithms, P2P in a broader perspective; incentive and fairness; new DHT designs; naming, indexing, and searching; file sharing; and networking and applications.

**200 technology square cambridge: *Algorithms - ESA 2003*** Giuseppe Di Battista, Uri Zwick, 2003-10-02 This book constitutes the refereed proceedings of the 11th Annual European Symposium on Algorithms, ESA 2003, held in Budapest, Hungary, in September 2003. The 66 revised full papers presented were carefully reviewed and selected from 165 submissions. The scope of the papers spans the entire range of algorithmics from design and mathematical analysis issues to real-world applications, engineering, and experimental analysis of algorithms.

**200 technology square cambridge: *The Inclusive Corporation*** Griff Hogan, 2003 Annotation Hogan (a consultant) offers businesses advice on relating to employees and customers with disabilities, presenting ideas for socially responsible business practices compatible with a competitive strategy. While focusing primarily on the requirements of the Americans with Disabilities Act, the book also provides guidance on marketing and employment inclusivity, the promotion of diversity and the dispelling of myths, and matters of etiquette. Annotation (c)2003 Book News, Inc., Portland, OR (booknews.com).

**200 technology square cambridge: *Multimodal Interface For Human-machine Communication*** Pong Chi Yuen, Yuan Yan Tang, Patrick S P Wang, 2002-04-10 With the advance of speech, image and video technology, human-computer interaction (HCI) will reach a new phase. In recent years, HCI has been extended to human-machine communication (HMC) and the perceptual user interface (PUI). The final goal in HMC is that the communication between humans and machines is similar to human-to-human communication. Moreover, the machine can support human-to-human communication (e.g. an interface for the disabled). For this reason, various aspects of human communication are to be considered in HMC. The HMC interface, called a multimodal interface, includes different types of input methods, such as natural language, gestures, face and handwriting characters. The nine papers in this book have been selected from the 92 high-quality papers constituting the proceedings of the 2nd International Conference on Multimodal Interface (ICMI '99), which was held in Hong Kong in 1999. The papers cover a wide spectrum of the multimodal interface.

**200 technology square cambridge: *Radical Innovations of Software and Systems Engineering in the Future*** Martin Wirsing, 2004-03-18 This book constitutes the thoroughly refereed post-proceedings of the 9th International Workshop on Radical Innovations of Software and Systems Engineering in the Future, RISSEF 2002, held in Venice, Italy, in October 2002. The 24 revised full papers presented were carefully reviewed and selected from the 36 invited workshop presentations. The authors evaluate all major paradigms and conceptual issues in software and systems design and analysis, especially regarding their potential for modifications to cope with future needs.

**200 technology square cambridge: *Advances in Artificial Intelligence*** Ahmed Y. Tawfik, Scott D. Goodwin, 2004-04-16 This book constitutes the refereed proceedings of the 17th Conference of the Canadian Society for Computational Studies of Intelligence, Canadian AI 2004, held in London, Ontario, Canada in May 2004. The 29 revised full papers and 22 revised short papers were carefully reviewed and selected from 105 submissions. These papers are presented together with the extended abstracts of 14 contributions to the graduate students' track. The full papers are organized in topical sections on agents, natural language processing, learning, constraint satisfaction and search, knowledge representation and reasoning, uncertainty, and neural networks.

**200 technology square cambridge: *Advances in Neural Information Processing Systems 16*** Sebastian Thrun, Lawrence K. Saul, Bernhard Schölkopf, 2004 Papers presented at the 2003 Neural

Information Processing Conference by leading physicists, neuroscientists, mathematicians, statisticians, and computer scientists. The annual Neural Information Processing (NIPS) conference is the flagship meeting on neural computation. It draws a diverse group of attendees -- physicists, neuroscientists, mathematicians, statisticians, and computer scientists. The presentations are interdisciplinary, with contributions in algorithms, learning theory, cognitive science, neuroscience, brain imaging, vision, speech and signal processing, reinforcement learning and control, emerging technologies, and applications. Only thirty percent of the papers submitted are accepted for presentation at NIPS, so the quality is exceptionally high. This volume contains all the papers presented at the 2003 conference.

**200 technology square cambridge: Distributed Computing** Faith Ellen Fich, 2003-12-09 This book constitutes the refereed proceedings of the 17th International Conference on Distributed Computing, DISC 2003, held in Sorrento, Italy in October 2003. The 25 revised full papers presented were carefully reviewed and selected from 91 submissions. A broad variety of current issues in distributed computing is addressed, from foundational and theoretical issues to applications in various fields.

**200 technology square cambridge: *Algorithms and Computation*** Toshihide Ibaraki, Naoki Katoh, Hirotaka Ono, 2003-12-03 This book constitutes the refereed proceedings of the 14th International Symposium on Algorithms and Computation, ISAAC 2003, held in Kyoto, Japan, in December 2003. The 73 revised full papers presented were carefully reviewed and selected from 207 submissions. The papers are organized in topical sections on computational geometry, graph and combinatorial algorithms, computational complexity, quantum computing, combinatorial optimization, scheduling, computational biology, distributed and parallel algorithms, data structures, combinatorial and network optimization, computational complexity and cryptography, game theory and randomized algorithms, and algebraic and arithmetic computation.

**200 technology square cambridge: LATIN 2004: Theoretical Informatics** Martin Farach-Colton, 2004-03-19 This volume contains the proceedings of the Latin American Theoretical Informatics (LATIN) conference that was held in Buenos Aires, Argentina, April 5-8, 2004. The LATIN series of symposia was launched in 1992 to foster interactions between the Latin American community and computer scientists around the world. This was the sixth event in the series, following S~ao Paulo, Brazil (1992), Valparaiso, Chile (1995), Campinas, Brazil (1998), Punta del Este, Uruguay (2000), and Cancun, Mexico (2002). The proceedings of these conferences were also published by Springer-Verlag in the Lecture Notes in Computer Science series: Volumes 583, 911, 1380, 1776, and 2286, respectively. Also, as before, we published a selection of the papers in a special issue of a prestigious journal. We received 178 submissions. Each paper was assigned to four program committee members, and 59 papers were selected. This was 80% more than the previous record for the number of submissions. We feel lucky to have been able to build on the solid foundation provided by the increasingly successful previous LATINs. And we are very grateful for the tireless work of Pablo Mart'inez L'opez, the Local Arrangements Chair. Finally, we thank Springer-Verlag for publishing these proceedings in its LNCS series.

**200 technology square cambridge: Power Aware Computing** Robert Graybill, Rami Melhem, 2013-04-17 With the advent of portable and autonomous computing systems, power consumption has emerged as a focal point in many research projects, commercial systems and DoD platforms. One current research initiative, which drew much attention to this area, is the Power Aware Computing and Communications (PAC/C) program sponsored by DARPA. Many of the chapters in this book include results from work that have been supported by the PACIC program. The performance of computer systems has been tremendously improving while the size and weight of such systems has been constantly shrinking. The capacities of batteries relative to their sizes and weights has been also improving but at a rate which is much slower than the rate of improvement in computer performance and the rate of shrinking in computer sizes. The relation between the power consumption of a computer system and its performance and size is a complex one which is very much dependent on the specific system and the technology used to build that system. We do not need a

complex argument, however, to be convinced that energy and power, which is the rate of energy consumption, are becoming critical components in computer systems in general, and portable and autonomous systems, in particular. Most of the early research on power consumption in computer systems addressed the issue of minimizing power in a given platform, which usually translates into minimizing energy consumption, and thus, longer battery life.

**200 technology square cambridge: Bispecific Antibodies** Roland E. Kontermann, 2011-07-21 The concept of using bispecific antibodies for cancer therapy by retargeting immune effector cells was developed several years ago. Initial clinical studies were rather disappointing mainly due to low efficacy, severe side effects and the immunogenicity of the bispecific antibodies. The progress in antibody engineering finally led to the generation of new classes of bispecific antibodies lacking these obstacles. In addition, new applications were established, such as pre-targeting strategies in radioimmunotherapy and dual targeting approaches in order to improve binding, selectivity and efficacy. In this book, the different ways of generating bispecific antibodies are described, with emphasis on recombinant formats. The various applications of bispecific antibodies, e.g. in cellular cancer immunotherapy, radioimmunotherapy and pretargeting strategies are covered, and emerging applications such as dual targeting strategies, which involve the simultaneous inhibition of two targets, are addressed.

**200 technology square cambridge: Relational and Kleene-Algebraic Methods in Computer Science** R. Berghammer, Bernhard Möller, Georg Struth, 2004-06-01 This book constitutes the thoroughly refereed joint postproceedings of the 7th International Seminar on Relational Methods in Computer Science and the 2nd International Workshop on Applications of Kleene Algebra held in Bad Malente, Germany in May 2003. The 21 revised full papers presented were carefully selected during two rounds of reviewing and improvement. The papers address foundational and methodological aspects of the calculi of relations and Kleene algebra as well as applications of such methods in various areas of computer science and information processing.
