No medications seemed to control the seizures I had. Not until I seen the Charlie Foundation present an Introduction of the Ketogenic Diet, did I ever consider dieting would control my seizures. In August 1996 I began the ketogenic diet. The ketogenic diet controlled my seizure better than any medications I tried. Because of my age (adult) it was hard to seek professional help that practiced the diet, since it is practiced on children only. Dieticians of a Children's Hospital nearby did coach me though the diet. Not until seven years later did I notice that certain foods were being eaten just before I had a seizure, specifically pasta. I began researching the possible cause of seizures and gluten appeared. I looked back on my records while I was on the Ketogenic Diet and noticed I had certain foods before having seizures. Those foods had gluten in it. Gluten sensitivity is becoming more prevalent as it is studied. Being unsuccessful contacting the medical profession I decided to write a book of both diets that helped me controlling seizures. Both diets may even help weight loss.

beach cliff fish steaks nutrition facts: Seafood Choices Institute of Medicine, Food and Nutrition Board, Committee on Nutrient Relationships in Seafood: Selections to Balance Benefits and Risks, 2007-03-09 The fragmented information that consumers receive about the nutritional value and health risks associated with fish and shellfish can result in confusion or misperceptions about these food sources. Consumers are therefore confronted with a dilemma: they are told that seafood is good for them and should be consumed in large amounts, while at the same time the federal government and most states have issued advisories urging caution in the consumption of certain species or seafood from specific waters. Seafood Choices carefully explores the decision-making process for selecting seafood by assessing the evidence on availability of specific nutrients (compared to other food sources) to obtain the greatest nutritional benefits. The book prioritizes the potential for adverse health effects from both naturally occurring and introduced toxicants in seafood; assesses evidence on the availability of specific nutrients in seafood compared to other food sources; determines the impact of modifying food choices to reduce intake of toxicants on nutrient intake and nutritional status within the U.S. population; develops a decision path for U.S. consumers to weigh their seafood choices to obtain nutritional benefits balanced against exposure risks; and identifies data gaps and recommendations for future research. The information provided in this book will benefit food technologists, food manufacturers, nutritionists, and those involved in health professions making nutritional recommendations.

beach cliff fish steaks nutrition facts: Seafood Sense Ken Babal, 2010-05-07 Americans are facing an eating conundrum. As each new fad diet comes along to poke holes in longtime edicts of nutrition and further restrict the "good" foods we are allowed to consume, we are left to wonder, what exactly is healthy at this point? The one food that has seemed to avoid the ire of new diets is the "old faithful" of nutrition - fish. Recently, however, studies have indicated that the high levels of mercury often found in fish and other seafood can be extremely harmful to one's health. But are these studies really accurate In Seafood Sense, Ken Babal sorts through fact and fiction to reveal the truth about the dangers and benefits of fish and other seafood. He explores in detail the reasons why the levels of mercury and other environmental toxins have risen in fish in recent times, and exactly how these high levels can affect one's health. He also delves deeply into the widespread benefits of seafood, in particular as a vital source of essential nutrients such as protein, vitamins, and, most notably, omega-3 fatty acids, which have been shown to protect against a variety of health conditions. After presenting readers with the "good" and the "bad," he guides them through the process of selecting the right kinds of fish and other seafood to avoid toxicity and gainoptimal health benefits.
