bill bryson a short history: A Short History of Nearly Everything Bill Bryson, 2003-05-06 One of the world's most beloved writers and New York Times bestselling author of *A Walk in the Woods* and *The Body* takes his ultimate journey—into the most intriguing and intractable questions that science seeks to answer. In *A Walk in the Woods*, Bill Bryson trekked the Appalachian Trail—well, most of it. In *A Sunburned Country*, he confronted some of the most lethal wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand—and, if possible, answer—the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world's most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. *A Short History of Nearly Everything* is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining.

bill bryson a short history: Quicklet on Bill Bryson's A Short History of Nearly Everything (CliffNotes-like Summary) Nicole Cipri, 2012-02-24 ABOUT THE BOOK In his introduction to *A Short History of Nearly Everything*, author Bill Bryson describes a childhood experience common to many of us: a brief infatuation with science, with all its potential and possibility. For Bryson, it was inspired by a textbook's cut-away illustration of the interior strata of the Earth, with the molten core at the center. For myself, it was a children's biography of Jacques Cousteau. Excited by the nearly endless prospects of science, the questions that could finally satisfy a child's curiosity, we both reached for more books, and found our budding passions firmly squashed by an impenetrable wall of unfathomable writing. As Bryson writes in his introduction, "there seemed to be a mystifying universal conspiracy among textbook authors to make certain the material they dealt with never

strayed too near the realm of the mildly interesting.” Bryson wrote *A Short History of Nearly Everything* as an antidote to the dry-as-dust science tomes that weigh down students’ backpacks. It is a layman’s love song to science, to its strange history and stranger characters. Published in 2003, it has become a popular addition to the popular science genre. MEET THE AUTHOR Nicole Cipri is a restless wanderer and passionate writer. A graduate of the Evergreen State School in Olympia, WA, Nicole has since written about such varied topics as modern urban farming, the role of glitterbombing as political theater, and the economic impacts of natural disasters. You can follow her adventures on Twitter, @nicolecipri. EXCERPT FROM THE BOOK Drama abounded in the 19th century. After the discovery of the first dinosaur fossil in 1784, and with subsequent uncovering of massive bones that belonged to other extinct species, there was an uncomfortable public debate concerning extinctions. Why, after all, would an omniscient God create species of animals only to casually wipe them out? Throughout history, the sciences have routinely butted heads with the Church, a trend that continues today. From geology and paleontology, Bryson moves to chemistry. With its origins in the enigmatic studies of alchemy, chemistry evolved along its own strange path. Bryson tells one exemplifying story, in which an amateur alchemist became convinced he could distill gold from human urine. “The similarity of color,” Bryson explains, “seems to have been a factor in his conclusion.” In an attempt to prove his hypothesis, the man collected fifty buckets of human urine, which he kept in his cellar. After a few months, the man noted, the substance in the buckets began to glow or explode into flames when exposed to air. He had failed in distilling gold from urine, but he had succeeded in creating phosphorous. Buy a copy to keep reading!
