bill bryson a short history of everything: A Short History of Nearly Everything Bill Bryson, 2004-09-14 One of the world's most beloved writers and New York Times bestselling author of *A Walk in the Woods* and *The Body* takes his ultimate journey—into the most intriguing and intractable questions that science seeks to answer. In *A Walk in the Woods*, Bill Bryson trekked the Appalachian Trail—well, most of it. In *A Sunburned Country*, he confronted some of the most lethal wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand—and, if possible, answer—the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world's most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. *A Short History of Nearly Everything* is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining.

bill bryson a short history of everything: A Really Short History of Nearly Everything Bill Bryson, 2008-10-28 Bill Bryson's own fascination with science began with a battered old school book he had when he was about ten or eleven years old. It had an illustration that captivated him—a diagram showing Earth's interior as it would look if you cut into it with a large knife and removed about a quarter of its bulk. The idea of lots of startled cars and people falling off the edge of that sudden cliff (and 4,000 miles is a pretty long way to fall) was what grabbed him in the beginning, but gradually his attention turned to what the picture was trying to teach him: namely that Earth's interior is made up of several different layers of materials, and at the very centre is a glowing sphere of iron and nickel, as hot as the Sun's surface, according to the caption. And he very clearly remembers thinking: "How do they know that?" Bill's storytelling skill makes the "How?" and, just as importantly, the "Who?" of scientific discovery entertaining and accessible for all ages. He covers the wonder and mystery of time and space, the frequently bizarre and often obsessive scientists and the methods they used, and the mind-boggling fact that, somehow, the universe exists and against all odds, life came to be on this wondrous planet we call home.

In their company, he undertakes a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge.
