bill nye the science guy with glasses: Innocent Experiments Rebecca Onion, 2016-10-04 From the 1950s to the digital age, Americans have pushed their children to live science-minded lives, cementing scientific discovery and youthful curiosity as inseparable ideals. In this multifaceted work, historian Rebecca Onion examines the rise of informal children's science education in the twentieth century, from the proliferation of home chemistry sets after World War I to the century-long boom in child-centered science museums. Onion looks at how the United States has increasingly focused its energies over the last century into producing young scientists outside of the classroom. She shows that although Americans profess to believe that success in the sciences is synonymous with good citizenship, this idea is deeply complicated in an era when scientific data is hotly contested and many Americans have a conflicted view of science itself. These contradictions, Onion explains, can be understood by examining the histories of popular science and the development of ideas about American childhood. She shows how the idealized concept of "science" has moved through the public consciousness and how the drive to make child scientists has deeply influenced American culture.

bill nye the science guy with glasses: Unstoppable Bill Nye, 2015-11-10 "Climate change is coming. What can we do about it? TV's 'Science Guy' has some answers. . . . An important message delivered in a winning manner." —Kirkus Reviews Just as World War II called an earlier generation to greatness, so the climate crisis is calling today's rising youth to action: to create a better future. In *Unstoppable*, Bill Nye expands the message for which he is best known and beloved. That message is that with a combination of optimism and scientific curiosity, obstacles become opportunities, and the possibilities of our world become limitless. With a scientist's thirst for knowledge and an engineer's vision of what can be, Bill Nye sees today's environmental issues not as insurmountable problems but as chances for our society to rise to the challenge and create a cleaner, healthier, smarter world. We need not accept that transportation consumes half our energy, and that two-thirds of the energy you put into your car is immediately thrown away out the tailpipe. We need not accept that dangerous emissions are the price we must pay for a vibrant economy and a comfortable life. Above all, we need not accept that we will leave our children a planet that is dirty, overheated, and depleted of resources. As Bill shares his vision, he debunks some of the most persistent myths and misunderstandings about global warming. When you are done reading, you'll be enlightened and empowered. Chances are, you'll be smiling, too, ready to join Bill and change the world.

bill nye the science guy with glasses: Science in the Media Paul R Brewer, Barbara L Ley, 2021-09-30 This timely and accessible text shows how portrayals of science in popular media—including television, movies, and social media—influence public attitudes around messages from the scientific community, affect the kinds of research that receive support, and inform perceptions of who can become a scientist. The book builds on theories of cultivation, priming, framing, and media models while drawing on years of content analyses, national surveys, and experiments. A wide variety of media genres—from Hollywood blockbusters and prime-time television shows to cable news channels and satirical comedy programs, science documentaries and children’s cartoons to Facebook posts and YouTube videos—are explored with rigorous social science research and an engaging, accessible style. Case studies on climate change, vaccines, genetically modified foods, evolution, space exploration, and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender, race, and other social identities. Science in the Media illuminates how scientists and media producers can bridge gaps between the scientific community and the public, foster engagement with science, and promote an inclusive vision of science, while also highlighting how readers themselves can become more active and critical consumers of media messages about science. Science in the Media serves as a supplemental text for courses in science communication and media studies, and will be of interest to anyone concerned with publicly engaged science.

bill nye the science guy with glasses: *Giving Our Children a Fighting Chance* Susan B. Neuman, Donna C. Celano, 2015-04-25 This is a compelling, eye-opening portrait of two communities in Philadelphia with drastically different economic resources. Over the course of their 10-year investigation, the authors of this important new work came to understand that this disparity between affluence and poverty has created a knowledge gap--far more important than mere achievement scores--with serious implications for students' economic prosperity and social mobility. At the heart of this knowledge gap is the limited ability of students from poor communities to develop information capital. This moving book takes you into the communities in question to meet the students and their families, and by doing so provides powerful insights into the role that literacy can play in giving low-income students a fighting chance. Important reading for a wide audience of educators, policymakers, school reformers, and community activists, *Giving Our Children a Fighting Chance*: Documents how inequalities begin early and are reinforced by geographic concentration. Compares community libraries to see how print is used in each neighborhood and how children develop as young readers. Looks at patterns that create radical differences in experiences and

attitudes toward learning prior to entering school. Explores the function of technology as a tool that exacerbates the divide between affluent students and those with limited access to information. Provides a comprehensive analysis of community literacy, documenting the transformation of media habits from books to computers. Concludes with a look inside schools to answer questions about what schools can do to overcome this complex, unequal playing field. Susan B. Neuman is a professor of Educational Studies at the University of Michigan, and has served as the U.S. Assistant Secretary for Elementary and Secondary Education. Her books include *Changing the Odds for Children at Risk*. Donna C. Celano is assistant professor of Communication at La Salle University in Philadelphia. "Giving Our Children a Fighting Chance depicts a stark reality: the enormous and growing divide in literacy and reading skill development between children growing up in poverty and children from the middle and upper classes—and the social and economic ramifications. This book should be required reading, not just for those in the education and policy fields, but for anyone who cares about the lives of children and the health of our society." —Kyle Zimmer, President and CEO, First Book "By walking the streets, riding the buses, and taking the subways,' Celano and Neuman give us a groundbreaking and sobering look at print and education technology resources in two neighborhoods, one wealthy and one poor. The result is a must-read eye-opener for anyone who cares about equal opportunity. The stuff of learning is essential but insufficient. Only with close teacher, parent, and student-to-student coaching can better print and technology resources make a difference." —Eugenia Kemble, Executive Director, Albert Shanker Institute "The authors of this text make you CARE about these communities and children. They provide insights about how we must focus on literacy in order to make a real difference in the lives of students. This is one of the most comprehensive analyses to date of community literacy, documenting the transformation of media habits from books to computers." —Linda B. Gambrell, Distinguished Professor of Education, Clemson University
