crash course us history 37: Economics: a Crash Course David Boyle, Andrew Simms, 2019-07-30 Not long ago, economic theories were generally based on a narrow set of principles. Then the continuing boom-bust cycle combined with the failure of the best economic minds to ensure that prosperity spreads down through the economy has left a series of very obvious question marks, and the orthodoxy has been challenged from inside and outside the profession. It now seems clear that human beings and the planet have to be brought into the analysis. The first chapter goes right back to the debate about the purposes for which money was originally invented. The Big Ideas chapter builds up a picture of the key ideas that have driven economic theories. Economics and People derives insights into the way that money and economics works from the way that people actually behave. Economics and the Planet covers some of the economic insights that have come from those whose expertise has been biological or environmental.

crash course us history 37: The Singularity Is Nearer Ray Kurzweil, 2024-06-25 AN INSTANT NEW YORK TIMES BESTSELLER ONE OF TIME'S 100 MOST INFLUENTIAL PEOPLE IN

ARTIFICIAL INTELLIGENCE The noted inventor and futurist's successor to his landmark book *The Singularity Is Near* explores how technology will transform the human race in the decades to come. Since it was first published in 2005, Ray Kurzweil's *The Singularity Is Near* and its vision of an exponential future have spawned a worldwide movement. Kurzweil's predictions about technological advancements have largely come true, with concepts like AI, intelligent machines, and biotechnology now widely familiar to the public. In this entirely new book Ray Kurzweil brings a fresh perspective to advances toward the Singularity—assessing his 1999 prediction that AI will reach human level intelligence by 2029 and examining the exponential growth of technology—that, in the near future, will expand human intelligence a millionfold and change human life forever. Among the topics he discusses are rebuilding the world, atom by atom with devices like nanobots; radical life extension beyond the current age limit of 120; reinventing intelligence by connecting our brains to the cloud; how exponential technologies are propelling innovation forward in all industries and improving all aspects of our well-being such as declining poverty and violence; and the growth of renewable energy and 3-D printing. He also considers the potential perils of biotechnology, nanotechnology, and artificial intelligence, including such topics of current controversy as how AI will impact employment and the safety of autonomous cars, and After Life technology, which aims to virtually revive deceased individuals through a combination of their data and DNA. The culmination of six decades of research on artificial intelligence, *The Singularity Is Nearer* is Ray Kurzweil's crowning contribution to the story of this science and the revolution that is to come.

crash course us history 37: Crash Course H. Bruce Franklin, 2018-09-03 Growing up during the Second World War, H. Bruce Franklin believed what he was told: that America's victory would lead to a new era of world peace. Like most Americans, he was soon led to believe in a world-wide Communist conspiracy that menaced the United States, forcing the nation into a disastrous war in Korea. But once he joined the U.S. Air Force and began flying top-secret missions as a navigator and intelligence officer, what he learned was eye-opening. He saw that even as the U.S. preached about peace and freedom, it was engaging in an endless cycle of warfare, bringing devastation and oppression to fledgling democracies across the globe. Now, after fifty years as a renowned cultural historian, Franklin offers a set of hard-learned lessons about modern American history. *Crash Course* is essential reading for anyone who wonders how America ended up where it is today: with a deeply divided and disillusioned populace, led by a dysfunctional government, and mired in unwinnable wars. It also finds startling parallels between America's foreign military exploits and the equally brutal tactics used on the home front to crush organized labor, antiwar, and civil rights movements. More than just a memoir or a history book, *Crash Course* gives readers a unique firsthand look at the building of the American empire and the damage it has wrought. Shocking and gripping as any thriller, it exposes the endless deception of the American public, and reveals from inside how and why many millions of Americans have been struggling for decades against our own government in a fight for peace and justice.

crash course us history 37: The Digital Future of English Simone Murray, 2025-07-18 More than any other academic discipline, literary studies is the creation of print culture. How then can it thrive in the digital era? Early 1990s predictions of the book's imminent demise presented a simplistic either/or choice between the legacy of moribund print and triumphalist digital technology. Yet we have grown to experience the two media as complexly interdependent and even complementary. Clearly, digital does not kill print. But literary studies in the digital era cannot simply resume business as usual. It is urgently necessary to reconsider the discipline's founding assumptions in light of digital technology. The digital era prompts a rethinking of literary studies' object of study, as well as its methods, theories, audiences and pedagogical practices. What counts as literature necessarily shifts in an age of proliferating born-digital texts and do-it-yourself (DIY) online publication. Where should literary studies sit institutionally, and how might it graft contextually-oriented social sciences methods onto its traditionally humanistic mode of textual analysis? Why should literary study continue to marginalize emotional responses to texts when online communities bond via readerly affect? Who is the audience for literary criticism in an age where expertise is routinely challenged yet communication with global book-loving publics has never been technologically easier? Finally, how can we utilize digital tools to rejuvenate literary studies pedagogy and help English staff better connect with millennial-age students? Literary studies has been convulsed for decades by debates over electronic literature and, more recently, digitally-aided 'distant reading'. But these discussions still mostly confine themselves to demarcating our proper object of study. We need to think more expansively about digital technology's impact on the underpinning tenets of the discipline. Literary Media Studies is pitched at fellow literary scholars, book historians, media theorists, cultural sociologists, digital humanists and those working at the interface of these converging disciplines. It models constructive engagement with contemporary digital culture. Most importantly, it brings a burst of sorely needed optimism to the question of literary studies' digital future.

crash course us history 37: Transforming Medical Education Delia Gavrus, Susan Lamb, 2022-04-11 In recent decades, researchers have studied the cultures of medicine and the ways in which context and identity shape both individual experiences and structural barriers in medical education. The essays in this collection offer new insights into the deep histories of these processes, across time and around the globe. Transforming Medical Education compiles twenty-one historical case studies that foreground processes of learning, teaching, and defining medical communities in educational contexts. The chapters are organized around the themes of knowledge transmission, social justice, identity, pedagogy, and the surprising affinities between medical and historical practice. By juxtaposing original research on diverse geographies and eras – from medieval Japan to twentieth-century Canada, and from colonial Cameroon to early Republican China – the volume disrupts traditional historiographies of medical education by making room for schools of medicine

for revolutionaries, digital cadavers, emotional medical students, and the world's first mandatory Indigenous community placement in an accredited medical curriculum. This unique collection of international scholarship honours historian, physician, and professor Jacalyn Duffin for her outstanding contributions to the history of medicine and medical education. An invaluable scholarly resource and teaching tool, *Transforming Medical Education* offers a provocative study of what it means to teach, learn, and belong in medicine.

crash course us history 37: *Nexus* Yuval Noah Harari, 2025-09-16 #1 NEW YORK TIMES BESTSELLER • From the author of *Sapiens* comes the groundbreaking story of how information networks have made, and unmade, our world. “Strikingly original . . . A historian whose arguments operate on the scale of millennia has managed to capture the zeitgeist perfectly.”—The Economist “This deeply important book comes at a critical time as we all think through the implications of AI and automated content production. . . . Masterful and provocative.”—Mustafa Suleyman, author of *The Coming Wave* For the last 100,000 years, we *Sapiens* have accumulated enormous power. But despite all our discoveries, inventions, and conquests, we now find ourselves in an existential crisis. The world is on the verge of ecological collapse. Misinformation abounds. And we are rushing headlong into the age of AI—a new information network that threatens to annihilate us. For all that we have accomplished, why are we so self-destructive? *Nexus* looks through the long lens of human history to consider how the flow of information has shaped us, and our world. Taking us from the Stone Age, through the canonization of the Bible, early modern witch-hunts, Stalinism, Nazism, and the resurgence of populism today, Yuval Noah Harari asks us to consider the complex relationship between information and truth, bureaucracy and mythology, wisdom and power. He explores how different societies and political systems throughout history have wielded information to achieve their

goals, for good and ill. And he addresses the urgent choices we face as non-human intelligence threatens our very existence. Information is not the raw material of truth; neither is it a mere weapon. Nexus explores the hopeful middle ground between these extremes, and in doing so, rediscovers our shared humanity.
