2016-11-26 The essays in this collection explore taboo and controversial humour in traditional

scripted (sitcoms and other comedy series, animated series) and non-scripted forms (stand-up comedy, factual and reality shows, and advertising) both on cable and network television. Whilst the focus is predominantly on the US and UK, the contributors also address more general and global issues and different contexts of reception, in an attempt to look at this kind of comedy from different perspectives. Over the last few decades, taboo comedy has become a staple of television programming, thus raising issues concerning its functions and appropriateness, and making it an extremely relevant subject for those interested in how both humour and television work.

cuatro de mayo arrested development: *Zombies, Migrants, and Queers* Camilla Fojas, 2017-02-10 The alarm and anxiety unleashed by the Great Recession found fascinating expression across popular culture. Harried survivors negotiated societal collapse in *The Walking Dead*. Middle-class whites crossed the literal and metaphorical Mexican border on *Breaking Bad* or coped with a lack of freedom among the marginalized on *Orange Is the New Black*. Camilla Fojas uses representations of people of color, the incarcerated, and trans/queers--vulnerable populations all--to work through the contradictions created by the economic crisis and its freefalling aftermath. Television, film, advertising, and media coverage of the crisis created a distinct kind of story about capitalism and the violence that supports it. Fojas shows how these pop culture moments reshaped social dynamics and people's economic sensibilities and connects the ways pop culture reflected economic devastation. She also examines how these artifacts illuminated parts of society usually kept off-screen or on the margins even as they defaulted to stories of white protagonists.

cuatro de mayo arrested development: *Pioneros en Machinima: Las raíces de la producción virtual* Tracy G. Harwood, Ben Grussi, 2024-09-24 Este importante nuevo trabajo se centra en los pioneros en machinima, considerados las raíces e inicios de la producción virtual. Los impactos de machinima son identificados por la comunidad, complementados por la investigación y por la experiencia de Harwood y Grussi durante un período de 25 años: desde juegos, cine y realización cinematográfica hasta la práctica de las artes digitales, desarrollos de tecnologías creativas e investigaciones y teorías relacionadas. Machinima es la primera práctica cultural digital que surgió de Internet y se convirtió en un género creativo convencional. Su última transformación es evidente a través de la creciente convergencia de juegos y películas, donde la producción virtual a tiempo real como práctica creativa profesional está dando como resultado nuevas formas de experiencias interactivas generadas por máquinas. Utilizando las obras machinima (del inglés 'machine' que significa máquina y 'cinema' que significa cine) de mayor importancia cultural como lentes para rastrear su historia e impactos, 'Pioneros en Machinima: Las raíces de la producción virtual' ofrece profundos testimonios de cineastas y otras personas involucradas en su surgimiento. La extensa referencia a materiales originales y entrevistas actualiza la historia de sus impactos a través de las reflexiones críticas de los primeros pioneros. Este libro será de interés para los investigadores y profesionales de machinima, junto con la cultura de los juegos, los teóricos de los medios, los estudiantes de estudios cinematográficos y de juegos, los artistas digitales y aquellos interesados en cómo las tecnologías creativas han influido en las comunidades de práctica a lo largo del tiempo.

Para Lynskey, la obra fundacional de este género es Strange Fruit que Billie Holiday interpretó por primera vez en 1939. En esa canción se reunían la calidad musical y la denuncia de una situación ignominiosa. Es importante insistir en esa reunión de calidad musical y denuncia porque éste es el criterio que rige este libro por encima de otras consideraciones. Pete Seeger, Joan Baez o Bob Dylan fueron pioneros de una carrera en la que los relevarían REM, U2 o Springsteen. Porque, al llegar a cierto punto, música popular y denuncia parecen indisociables. Lynskey se ocupa de esta relación describiendo los movimientos sociales que se apoyaron en la música para difundir su mensaje

cuatro de mayo arrested development: Proceso penal y (neuro)ciencia: una interacción desorientada Julià Pijoan, Miquel, 2020-01-02 La utilización de hipótesis científicas en el proceso penal no es particularmente desconocida, sino que se remonta a varios siglos. Una de sus principales funciones ha sido el reconocimiento de los delincuentes, sirviéndose para ello de conclusiones adulteradas. En la actualidad, dicha utilización ha resurgido con el advenimiento de la neurociencia. En particular, con una de las aplicaciones que acapara gran parte de esta relación interdisciplinaria: la neuropredicción (neuroprediction). Ante este escenario, el presente trabajo examina si la neuropredicción es una reformulación de teorías atávicas, infructuosas y sesgadas o, por el contrario, representa la superación de los escollos y los déficits que caracterizaron anteriores planteamientos teóricos. A los efectos de disolver esta disyuntiva, se analizan: la científicidad de las premisas que vertebran la neuropredicción, la solidez y consistencia de los parámetros que se señalan como biomarcadores, el impacto que dicha propuesta irradia en los principios y normas que rigen el proceso penal y la idoneidad de buscar respuestas jurídicas en la ciencia. La meditación acerca de estos particulares desemboca en la conclusión de la no-plausibilidad de la prueba neurocientífica como prognosis de peligrosidad, al presentar quiebras científicas y jurídicas críticas. A resultas de ello, en la parte final de la obra se bosquejan nuevos ámbitos de interacción interdisciplinaria que sorteen los obstáculos identificados.

Habener, Mehboob Hussain, 2012-12-06 Diabetes mellitus is rapidly increasing in prevalence throughout both developed and developing countries. The social and economic burden of this disease is estimated to cost 14 billion dollars worldwide. In the USA alone, 15 million individuals are diabetic, nearly half of them unaware of their condition. Complications of diabetes mellitus are the leading causes for blindness, limb amputation and chronic renal failure and kidney transplantation in industrialized countries. Further, diabetes mellitus per se and the metabolic derangement associated with diabetes are important risk factors for cardiovascular disease. Diabetes, as defined by an elevated fasting blood glucose level is presently subdivided in etiologically distinct groups. The most prevalent being type 2 (adult onset) diabetes characterized by insulin resistance and failure of the β -cell to supply insulin in amounts sufficient to meet the body's needs. Type 1 (juvenile) diabetes, most commonly with an onset during childhood and adolescence, is caused by an auto-immune destruction of the pancreatic β -cells. The causations of both type 1 and type 2 diabetes involve a combination of complex genetic traits and environmental influences. A third category are the mature onset diabetes of the young (MODY). This comparatively small group of patients (~10% of diabetes) presents relative early in life (<30 years of age) compared to the more common late onset type 2 diabetes.

Gonzalez, 2017-02-03 American cities are increasingly turning to revitalization strategies that embrace the ideas of new urbanism and the so-called creative class in an attempt to boost economic growth and prosperity to downtown areas. These efforts stir controversy over residential and commercial gentrification of working class, ethnic areas. Spanning forty years, Latino City provides an in-depth case study of the new urbanism, creative class, and transit-oriented models of planning and their implementation in Santa Ana, California, one of the United States' most Mexican communities. It provides an intimate analysis of how revitalization plans re-imagine and alienate a place, and how community-based participation approaches address the needs and aspirations of lower-income Latino urban areas undergoing revitalization. The book provides a critical introduction to the main theoretical debates

and key thinkers related to the new urbanism, transit-oriented, and creative class models of urban revitalization. It is the first book to examine contemporary models of choice for revitalization of US cities from the point of view of a Latina/o-majority central city, and thus initiates new lines of analysis and critique of models for Latino inner city neighborhood and downtown revitalization in the current period of socio-economic and cultural change. Latino City will appeal to students and scholars in urban planning, urban studies, urban history, urban policy, neighborhood and community development, central city development, urban politics, urban sociology, geography, and ethnic/Latino Studies, as well as practitioners, community organizations, and grassroots leaders immersed in these fields.
