curriculum development centre zambia: The Oxford Handbook of the Zambian Economy ,
2024-08-23 This handbook offers a comprehensive and authoritative account of the Zambian economy, including past and current trends. The Zambian economy has evolved from simple and fragmented agrarian activities at the turn of the 20th Century into a wide range of organized and regulated modern economic activities today. While the economy has largely revolved around the mining industry since the early 1920s when the extraction of copper and other mineral ores on the Copperbelt begun, there has been a gradual broadening of economic activities over time, with services now accounting for almost two-thirds of gross domestic product (GDP). This book shows that since colonial times, one of the persistent items on the economic development agenda in what is today known as Zambia has been the need to diversify the economy to reduce dependence on mining, in terms of foreign exchange earnings and public revenue. While the need to diversify the economy has been well-acknowledged by successive Zambia governments, including the current government, achieving this goal has proved to be elusive so far. By presenting a collection of well-researched and empirically supported chapters on the key areas of the Zambian economy, this volume gives readers a good sense of where the Zambian economy has come from, where it is at the moment, but also highlights the challenges and prospects for economic growth.

curriculum development centre zambia: Citizenship Education and Social Development in Zambia Ali A. Abdi, Edward Shizha, Lee Ellis, 2010-06-01 Zambia, the butterfly-shaped, central African country has a population of about 11 million people, and as other Sub-Saharan African countries, has been trying to democratize since the early 1990s. Clearly, though, the promise of political reform did not fulfill the expectations of the public, and with about 60 percent of the population living below the poverty line, many Zambians are no longer confident that more open political systems can improve their lives. But the problem may not be inherent in the political process itself, and could be found more in the apparent disconnection between people's needs and the way the country's affairs are run. It is with respect to these and related issues that this book emphasizes the crucial relationship between education and political participation, and specifically highlights citizenship education as essential for Zambia's social development. Social development, which should comprise, inter alia, the economic, political, and cultural wellbeing of societies can be enhanced by citizenship education, which focuses on elevating people's understanding of their rights and responsibilities vis-à-vis government institutions, structures and functions. Indeed, it is the centrality of the political component in people's lives, especially its relationship with public policy and public programs that should underline the important role of citizenship education. In describing

these issues, the book analyzes the role of the media, women's groups and youth in enhancing the political, educational, and by extension, the economic lives of the Zambian people. The book should interest students and scholars of Zambian (as well as African) education, politics, and social development. It should also be useful for policy makers, institutional managers and both public and para-public leaders in Zambia and elsewhere in the continent.

Part 1 presents an overview of the linguistic situation in Zambia: who speaks which languages, where they are spoken, what these languages are like. Special emphasis is given to the extensive survey of the languages of the Kafue basin, where extensive changes and relocations have taken place. Part 2 is on language use: patterns of competence and of extension for certain languages in urban settings, configurations of comprehension across language boundaries, how selected groups of multilinguals employ each of their languages and for what purposes, what languages are used in radio and television broadcasting and how decisions to use or not use a language are made. Part 3 involves language and formal education: what languages, Zambian and foreign, are used at various levels in the schools, which are taught, with what curricula, methods, how teachers are trained, how issues such as adult literacy are approached and with what success.

curriculum development centre zambia: Share Engage Educate Vinesh Chandra, 2019-12-09 There is no doubt that our world is becoming increasingly more connected through digital technologies. For meaningful participation in this environment we need to be digitally literate, yet there are many children in developing countries who have yet to touch a computer because of social disadvantage. For these children, schools are the only place where they can build this capacity. Regrettably, many schools in these communities are under resourced. They do not have sufficient and relevant library books, let alone digital resources. As a consequence, teaching and learning strategies have remained unchanged for decades. The field of critical pedagogy evolved through the initial work of Paulo Freire. This theory is underpinned by critical thinking about societal issues followed by action and reflection. When citizens are armed with such knowledge and skills, they can positively impact on the lives of the underprivileged. Critical pedagogy, however, is still struggling to find its meaningful place, particularly in higher education. This is largely due to the lack of effective strategies and critical educators. Share Engage Educate is an auto-ethnography which presents accounts of the initiatives that were undertaken to promote print and digital literacy in rural and remote schools in eight developing countries. It highlights the experiences of school leaders, teachers, university staff and students, and globally minded citizens working alongside local communities to enhance the quality of education for over 15,000 children in these schools. This book explores how critical pedagogy can unfold in educational spaces through knowledge sharing, engaging and in the process educating all stakeholders.

curriculum development centre zambia: Fire-Eaters Mwelwa C. Musambachime, 2017-01-13 As late as the beginning of the nineteenth century, despite the many years of direct contact with European traders and the influx of European goods, most African societies still produced their own iron and its products, or obtained them from neighbouring communities through local trade. The quality of iron products was such that, despite competition from European imports, local iron production survived into the early twentieth century in some parts of the continent. The production process covered prospecting, mining, smelting, and forging. Different types of ore were available all over the continent and were extracted by shallow or alluvial mining. A variety of skills were required for building furnaces, producing charcoal, smelting, and forging iron into goods. Iron production was generally not an enclave activity but a process that fulfilled the totality of socio-economic needs. It also fit the gender division of labour within communities.

curriculum development centre zambia: Knowledge for Justice Tor Halvorsen, Hilde Ibsen, 2017-11-28 With the adoption of the United Nations Sustainable Development Goals (SDGs) and the Paris Agreement, the purpose of development is being redefined in both social and environmental terms. Despite pushback from conservative forces, change is accelerating in many sectors. To drive this transformation in ways that bring about social, environmental and economic justice at a local, national, regional and global levels, new knowledge and strong cross-regional networks capable of foregrounding different realities, needs and agendas will be essential. In fact, the power of knowledge matters today in ways that humanity has probably never experienced before, placing an emphasis on the roles of research, academics and universities. In this collection, an international diverse collection of scholars from the southern African and Nordic regions critically review the SDGs in relation to their own areas of expertise, while placing the process of knowledge production in the spotlight. In Part I, the contributors provide a sober assessment of the obstacles that neo-liberal hegemony presents to substantive transformation. In Part Two, lessons learned from NorthSouth research collaborations and academic exchanges are assessed in terms of their potential to offer real alternatives. In Part III, a set of case studies supply clear and nuanced analyses of the scale of the challenges faced in ensuring that no one is left behind. This accessible and absorbing collection will be of interest to anyone interested in NorthSouth research networks and in the contemporary debates on the role of knowledge production. The Southern AfricanNordic Centre (SANORD) is a network of higher education institutions that stretches across Denmark, Finland, Iceland, Norway, Sweden, Botswana, Namibia, Malawi, South Africa, Zambia and Zimbabwe. Universities in the southern African and Nordic regions that are not yet members are encouraged to join.

curriculum development centre zambia: Societal Transformations and Resilience in Times of Crisis Shoukat, Ghazala, Tunio, Muhammad Nawaz, 2022-09-16 The COVID-19 pandemic has spread across the world and left turmoil in every facet of society in its wake. As in-person activities came to an end for public safety, businesses closed, classrooms scrambled to transition online, and society was forever changed. curriculum development centre zambia: Bridges and Barriers Eddie Williams, 2014-06-03 Recent decades have seen sub-Saharan Africa decline in both economic and human terms. The rich North has responded with a barrage of well-publicized initiatives, from pop concerts to international commitments on debt relief, aid, trade and good governance. Among the complex of factors necessary to sustain economic and human development, education receives little media coverage, although it is crucial. However, education must be effective. This book argues that in 'Anglophone' Africa, education is not effective because of the use of English, rather than children's first languages, both as the medium of instruction, and also as the language in which children are first taught to read. Research is presented from Malawi and Zambia, countries with contrasting language policies, using evidence from tests in English and African languages, small-group discussions and classroom observation. The findings show that English-medium policies in Africa do not give students any advantage in English over first-language policies, while the use of English discriminates against girls and rural children. The book concludes that much education in Africa is a barrier rather than a bridge to learning because of the prevailing language ideology, which has resulted in massive over-estimation of the value of English. While appropriate language policies alone will not solve education and development difficulties in Africa, they do have a positive contribution to make. The evidence presented here suggests they are failing to make that contribution.

curriculum development centre zambia: Print Culture in Southern Africa Caroline Davis, Archie Dick, Elizabeth le Roux, Dennis Walder, 2021-07-29 Print Culture in Southern Africa is concerned with the institutions and processes informing textual production, circulation and consumption in the region, over a broad historical period from the late 18th century to the present day. The book is organised around three closely related themes. Firstly, it presents original research into the formation of reading publics and the impact of reading cultures, by uncovering obscure but important reading communities and circuits of book distribution and reception. A second theme is the relationship between print and politics, with a particular focus on the networks of power: how control over the production and circulation of printed books has shaped literary and cultural development. The third theme is transnational print culture, and how the control exercised by publishers in Europe and America has shaped literature and society in southern Africa. Drawing together interdisciplinary research and diverse methodologies, the collection encompasses a range of perspectives, including literary studies, anthropology, publishing studies, the history of the book and art history, and many of the chapters are based on previously unexamined archives and collections. The volume contributes to current debates and opens up new and exciting ways of

furthering the study of postcolonial literature and African book history. The chapters included in this book were originally published in the Journal of Southern African Studies.

curriculum development centre zambia: Wealth from the Rocks Mwelwa C. Musambachime, 2016-07-29 This study focuses on the study of metallurgy in pre-colonial Zambia to 1890. A general review of the literature on metallurgy in pre-colonial Zambia reveals that during the period our study (up to 1890), three metals were mined. Iron production was a widespread, important and significant phenomenon, responsible for producing utility toolshoes, axe, knives, weapons, spears, arrow heads and broad knives, and regalia for the political and religious office holderscopper, which was confine to few areas; and gold to even fewer areas. Metallurgy was an important economic activity in which all ethnic groups participated in different levels of intensity. From iron ore which was smelted in elaborate and complicated processes imbued in magic, song, dance, incantations, medicines, and taboos by members of exclusively male guilds, blacksmiths were able to produce the following: (a) tools used in agriculture: hoes, axes used to clear forestays or areas to be cultivated to grow food for subsistence, non-edible crops such as tobacco and hemp which were smoked as part of relaxation, cotton used to make blankets sand shawls, needles for mending clothes, and knives for a variety of uses; (b) hunting using varieties of spears to hunt game, seek protection from dangerous animals, for defence of resources or offence to capture desired resources; (c) various sizes of hooks used in fishing different varieties of fish; and (d) making of regalia used in chieftaincies and priesthood as symbols of authority. Copper was also smelted and put in ingots of varying sizes and rods of varying sizes and lengths, which were (a) used to make copper wires as wires, rods, vessels and other utensils, copper smiths produced jewellery and ornaments and cast art pieces such as statues and necklaces worn by men and women as status symbols; (b) used in exchange of goods and services as currency; and (c) used to produce regalia for the for those in authority. Gold was mined directly and processed into making as variety of items such as buttons and regalia. In its various forms of development and sophistication, metallurgy was responsible for the economic, social and political advances among the pre-colonial societies. A variety of skills was required for building furnaces, producing charcoal, smelting and forging iron into goods. Metallurgy and production of various items that were needed and necessary for an improved life were generally not an enclave activity but a process that satisfied the totality of socioeconomic needs. It also promoted the gender division of labour within community. *Wealth from the Rocks* is therefore a detailed study of the place, role, and function of metallurgy in pre-colonial Zambian societies.
