cvcs pharmacy tech training: *A New U* Ryan Craig, 2018-09-11 Every year, the cost of a four-year degree goes up, and the value goes down. But for many students, there's a better answer.

So many things are getting faster and cheaper. Movies stream into your living room, without ticket or concession-stand costs. The world's libraries are at your fingertips instantly, and for free. So why is a college education the only thing that seems immune to change? Colleges and universities operate much as they did 40 years ago, with one major exception: tuition expenses have risen dramatically. What's more, earning a degree takes longer than ever before, with the average time to graduate now over five years. As a result, graduates often struggle with enormous debt burdens. Even worse, they often find that degrees did not prepare them to obtain and succeed at good jobs in growing sectors of the economy. While many learners today would thrive with an efficient and affordable postsecondary education, the slow and pricey road to a bachelor's degree is starkly the opposite. In *A New U: Faster + Cheaper Alternatives to College*, Ryan Craig documents the early days of a revolution that will transform—or make obsolete—many colleges and universities. Alternative routes to great first jobs that do not involve a bachelor's degree are sprouting up all over the place. Bootcamps, income-share programs, apprenticeships, and staffing models are attractive alternatives to great jobs in numerous growing sectors of the economy: coding, healthcare, sales, digital marketing, finance and accounting, insurance, and data analytics. *A New U* is the first roadmap to these groundbreaking programs, which will lead to more student choice, better matches with employers, higher return on investment of cost and time, and stronger economic growth.

cvcs pharmacy tech training: Dispensing Medical Countermeasures for Public Health Emergencies Institute of Medicine, Board on Health Sciences Policy, Forum on Medical and Public Health Preparedness for Catastrophic Events, 2008-10-03 On March 3-4, 2008, the Institute of Medicine (IOM) Forum on Medical and Public Health Preparedness for Catastrophic Events hosted a workshop titled Medical Countermeasures Dispensing. The overall objective was to discuss a range of solutions to rapidly provide medical countermeasures to protect large numbers of people prior to or during a public health emergency, such as a bioterrorist attack or infectious disease outbreak. The United States is currently unprepared to confront the range of threats it is facing, such as an intentional anthrax release, severe acute respiratory syndrome (SARS), or pandemic influenza, and it must plan aggressively to counteract the threat of these and other future public health emergencies. Countermeasure dispensing must harness all types of imaginative partnerships between public and private institutions, working together in ways tailored to meet individual community needs. This workshop summary highlights the presentations and subsequent discussion that occurred at the workshop.

cvcs pharmacy tech training: Human Work in the Age of Smart Machines Jamie Merisotis, 2020-10-06 A public policy leader addresses how artificial intelligence is transforming the future of labor—and what we can do to protect the role of workers. As computer technology advances with dizzying speed, human workers face an ever-increasing threat of obsolescence. In *Human Work In the Age of Smart Machines*, Jamie Merisotis argues that we can—and must—rise to this challenge by preparing to work alongside smart machines doing that which only humans can: thinking critically, reasoning ethically, interacting interpersonally, and serving others with empathy. The president and CEO of Lumina Foundation, Merisotis offers a roadmap for the large-scale, radical changes we must make in order to find abundant and meaningful work for ourselves in the 21st century. His vision centers on developing our unique capabilities as humans through learning opportunities that deliver fair results and offer a broad range of credentials. By challenging long-held assumptions and expanding our concept of work, Merisotis argues that we can harness the population's potential, encourage a deeper sense of community, and erase a centuries-long system of inequality.

cvcs pharmacy tech training: Apprentice Nation Ryan Craig, 2023-11-07 College isn't for everyone. It's time to challenge the status quo and embrace the potential of apprenticeships in tech,

healthcare, finance, and more—which can provide a sustainable pathway to economic opportunity. For decades, college has been the only respectable way to access the world of work, despite paralyzing tuition and a dire lack of practical skills that has left 40 percent of college graduates underemployed, unfulfilled, and struggling to repay student loan debt. Education and workforce expert Ryan Craig explores how a modern apprenticeship system will allow students and job seekers to jump-start their careers by learning while they earn—ultimately leading to greater workforce diversity and geographic mobility. With a deep dive into the history behind America's outdated college system, Craig reveals: The origins of the student debt crises and admissions scandals Why apprenticeships are an effective pathway to career opportunity What America can do to catch up with other nations making apprenticeship opportunities broadly available Where students and job seekers can go to land an apprenticeship Featuring a directory of US apprenticeship programs by industry and location, *Apprentice Nation* is an accessible blueprint for a country where young Americans of all backgrounds can launch careers in a variety of in-demand fields.
