Stock Monitoring and Ordering

Technicians regularly review inventory reports to identify low stock levels and place orders for replenishment. They coordinate with suppliers and CVS distribution centers to maintain adequate supplies of medications and pharmacy products.

Storage and Expiration Control

Proper storage conditions, such as temperature control and humidity regulation, are maintained to preserve medication quality. Pharmacy technicians also track expiration dates and remove expired products from shelves to prevent dispensing outdated medications.

Accurate Documentation and Record-Keeping

Maintaining precise records of inventory movements, prescription fills, and controlled substance logs is essential. These records support audits, regulatory inspections, and internal quality assurance processes.
