Overview of Daikin Chillers

Daikin chillers are advanced cooling systems designed to provide precise temperature control for commercial and industrial environments. These units utilize refrigeration cycles to remove heat from a liquid, typically water or a glycol solution, which is then circulated to air handling units or process equipment. Daikin offers a range of chiller models, including air-cooled and water-cooled variants, tailored to different cooling capacities and operational needs. Understanding the basic principles and components of these chillers is fundamental before delving into the specifics outlined in the Daikin chiller manual.

Types of Daikin Chillers

Daikin manufactures several types of chillers, each suited for specific applications:
