forensic science anthony j bertino: Afterlives of Affect Matthew C. Watson, 2020-07-27 In *Afterlives of Affect* Matthew C. Watson considers the life and work of artist and Mayanist scholar Linda Schele (1942-98) as a point of departure for what he calls an excitable anthropology. As part of a small collective of scholars who devised the first compelling arguments that Maya hieroglyphs were a fully grammatical writing system, Schele popularized the decipherment of hieroglyphs by developing narratives of Maya politics and religion in popular books and public workshops. In this experimental, person-centered ethnography, Watson shows how Schele's sense of joyous discovery and affective engagement with research led her to traverse and disrupt borders between religion, science, art, life, death, and history. While acknowledging critiques of Schele's work and the idea of discovery more generally, Watson contends that affect and wonder should lie at the heart of any reflexive anthropology. With this singular examination of Schele and the community she built around herself and her work, Watson furthers debates on more-than-human worlds, spiritualism, modernity, science studies, affect theory, and the social conditions of knowledge production.

forensic science anthony j bertino: The Routledge History Handbook of Central and Eastern Europe in the Twentieth Century Jochen Böhrer, Włodzimierz Borodziej, Joachim von Puttkamer, 2022-02-15 Violence analyzes both the violence exerted on the societies of Central and Eastern Europe during the twentieth century by belligerent powers and authoritarian and/or totalitarian regimes and armed conflicts between ethnic, social and national groups, as well as the interaction between these two phenomena. Throughout the twentieth century, Central and Eastern Europe was hit particularly hard by war, violence and repression, with armed conflicts in the Balkans at the start and end of the period and two world wars in between. In the shadow of these full-scale wars, ethnic, social and national conflicts were intensified, found new forms and were violently played out. The interwar period witnessed the emergence of authoritarian states who enforced their claim to power through continued violence against political opponents, stigmatized ethnic, national and social groups, and were themselves fought with subversive or terrorist techniques. This volume focuses specifically on physical violence: war and civil war, ethnic cleansing, systematic starvation policies, deportations and expulsions, forced labour and prison camps, persecution by state security - such as intensive surveillance, which had an enormous impact on the lives of those it affected - and other forms of government oppression and militant resistance. Geographically, it considers the western regions of Belarus and Ukraine as sites of extreme violence that had a noticeable impact on neighbouring Central and Eastern European countries as well. The concluding volume in a four-volume set on Central and Eastern Europe in the twentieth century, it is the go-to resource for those interested in violence in this complex region.
