forensic science tv shows: After Memory Matthias Schwartz, Nina Weller, Heike Winkel, 2021-06-08 Even seventy-five years after the end of World War II, the commemorative cultures surrounding the War and the Holocaust in Central, Eastern and South Eastern Europe are anything but fixed. The fierce debates on how to deal with the past among the newly constituted nation states in these regions have already received much attention by scholars in cultural and memory studies. The present volume posits that literature as a medium can help us understand the shifting attitudes towards World War II and the Holocaust in post-Communist Europe in recent years. These shifts point to new commemorative cultures shaping up ‘after memory’. Contemporary literary representations of World War II and the Holocaust in Eastern Europe do not merely extend or replace older practices of remembrance and testimony, but reflect on these now defunct or superseded narratives. New narratives of remembrance are conditioned by a fundamentally new social and political context, one that emerged from the devaluation of socialist commemorative rituals and as a response to the loss of private and family memory narratives. The volume offers insights into the diverse literatures of Eastern Europe and their ways of depicting the area’s contested heritage.

forensic science tv shows: Crime, Media and Culture Greg Martin, 2018-12-07 Working broadly from the perspective of cultural criminology, *Crime, Media and Culture* engages with theories and debates about the nature of media-audience relations, examines representations of crime and justice in news media and fiction, and considers the growing significance of digital technologies and social media. The book discusses the multiple effects media representations of crime have on audiences but also the ways media portrayals of crime and disorder influence government policy and lawmaking. It also considers the processes by which certain stories are selected for their newsworthiness. Also examined are the theoretical, conceptual and methodological underpinnings of cultural criminology and its subfields of visual criminology and narrative criminology. Drawing on case studies and empirical examples from the increasingly blurred worlds of reality and entertainment, the dynamics of crime, media and culture are illuminated across a range of chapters covering topics that include: moral panics/folk devils and trial by media; fear of crime; cop shows and courtroom dramas; female criminality and child-on-child killing; serial killers; surveillance, new media and policing; organized crime and state crime. *Crime, Media and Culture* will be an invaluable resource for undergraduate and postgraduate students interested in criminology and media studies. The book will also prove useful for lecturers and academic researchers wishing to explore the intersections of crime, media and cultural inquiry.
