free project management webinars: Rethinking Technical Services Bradford Lee Eden, 2015-11-13 Volume 6 of the series *Creating the 21st-Century Academic Library* is focused on academic library technical services operations, and ways that they have been transformed and reimagined for working in today's higher education environment. The literature on the place and role of technical services, technical services librarians, technical services staff, and technical services operations has expanded and grown in the last few years as decreased budgets, a focus on essential public services, and information discovery on the Internet has driven the profession to re-examine the need or importance of this back-end (or hidden) library department. Topics discussed in this book include frameworks for the networked environment, roles for metadata librarians in the areas of research data and digital initiatives, the renewed focus on the discovery of information and its place in academic libraries, the new "normal" in academic library technical services operations, emerging roles and opportunities for technical services managers, the re-training and re-skilling of technical services staff, hidden collections and needed or unexplored areas of expertise with technical services librarians and staff, the faceted application of subject headings (FAST) and obsolete or outdated subject terminology within Library of Congress Subject Headings, and a conversation about downsizing and moving forward within a law library technical services unit.

free project management webinars: The Stakeholder Perspective Massimo Pirozzi, 2019-09-30 *The Stakeholder Perspective* places people at the center of both projects and project management. It gives to the project management community a helpful, innovative, stakeholder-centered approach to increase projects' delivered value and success rate. It presents a logical model also called the Stakeholder Perspective, which acts as the reference point in a structured path to effectiveness. Starting from the analysis of a project's stakeholders, the model integrates both rational and relational innovative approaches. Its continuous focus on stakeholder requirements and expectations helps to set a proper path, and to maintain it, in order to target success and to achieve goals in a variety of projects with different size and complexity. The book presents a set of innovative and immediately applicable techniques for effective stakeholder identification and classification, as well as analysis of stakeholder requirements and expectations, key stakeholders management, stakeholder network management, and, more generally, stakeholder relationship management. The proposed stakeholder classification model consists of just four communities, each one based on the commonality of main interests and behavior. This model features an accurate and stable identification process to increase effective communication and drastic reduce relationship complexity. A systemic approach is proposed to analyze both stakeholder

requirements and expectations. The approach aids in detecting otherwise unclear stakeholder requirements and/or hidden stakeholder expectations. An interactive communication model is presented along with its individual and organizational frames of reference. Also presented are relevant cues to maximize effective and purposeful communication with key stakeholders as well as with the stakeholder network. The importance of satisfying not only the project requirements but also the stakeholder expectations is demonstrated to be the critical success factor in all projects. An innovative approach based on the perceived value and key performance indicators shows how to manage different levels of project complexity. The book also defines a complete structured path to relationship effectiveness called Relationship Management Project, which can be tailored to enhance stakeholder and communication management processes in each one of the project management process groups (i.e. initiating, planning, executing, monitoring and controlling, and closing). The book concludes with a look ahead at Project Management X.0 and the stakeholder-centered evolution of both project and portfolio management.
