fresno state computer science: Making Takshila in California Ryan Baidya, 2019-02-06 Making Takshila in California is an account of my journey to make a Takshila in California. It is a tale of revealing corruption, collusion, and abuse of power by the State of California. The Bureau for Private Post Secondary Education (BPPE), and Department of Consumer Affairs (DCA) of California engaged in abusive and unconstitutional activities. Takshila: One of the best performing innovative start-up institutions that trained high-tech professionals successfully. Silicon Valley and rest of the country happily employed them. Yet CTU has been bullied, threatened and subjected to injustice, prejudice, and discrimination. And the question is WHY? This WHY took us to the land where State Assembly members, Senators, the U.S. Congressman, and some media did not want to go. We questioned. We exposed wrongdoings of BPPE, DCA, California Attorney General (Kamala Harris and Xavier Becerra). We were, thus, systematically bullied, threatened, discriminated against and violated of our constitutional rights. We are not a unique situation. There are over several hundred may be near thousands of California institutions have a similar story to tell. Someone needs to ASK.

fresno state computer science: Equity in STEM Education Research Alberto J. Rodriguez, Regina L. Suriel, 2022-09-06 This book focuses on the creative and transformative work of scholars who are advancing social justice through science/STEM education with limited resources. It draws attention to the significant body of work being conducted in various contexts so that readers could reflect and appreciate how much broader and transformative our impact could be if funding agencies, policy makers, and other researchers would widen their perspective and seek to promote social justice-driven scholarship. Public funding for STEM research on K-12 and teacher education that targets special populations is often limited and tends to favor mainstream research. This book contains case studies on innovative and promising STEM research with a focus on equity, diversity and social justice that are funded with limited or no public funding. It also presents anecdotes from authors in relation to their struggles in either securing funding for their reported study or seeking to publish its findings. This provides more context to the challenges of conducting non-mainstream research in science/STEM education. Most of the contributors are scholars of color and/or women conducting research with traditionally marginalized populations in science/STEM. Thus, this book offers an additional venue to share the voices of marginalized scholars and allies seeking to broaden our understanding of the challenges and successes of promoting equity, diversity, and social justice in various educational contexts.

fresno state computer science: *Cyberclipper* Jason O'Neil, 2017-04-24 This is a novel about a prince of Dubai, who devises a scheme to rob banks and casinos of hundreds of millions of dollars in what is perceived as a perfect crime. Prince Yousif Latif, who holds a PhD in Mathematics from UCLA, employs a large high-speed craft (HSC) made in Australia, which is outfitted as a megayacht suitable for a billionaire. The craft holds a secret cargo used to bypass computer protection software programs. Cybercrimes are staged around the world where the rich and famous reside: Monaco, Bermuda, Cabo San Lucas, Mexico. The book is filled with the exploits of the playboy prince, who has close friends sworn to secrecy and many others such as harbormasters, who are clueless as to the real purpose of the megayacht. Once the crimes are discovered, the International Police Organization (INTERPOL) is mobilized but, eventually, runs out of clues, resulting in a cold case. This is not a who-done-it novel in the usual sense because the reader is gradually brought into the plot and figures it out. However, the real mystery is whether the prince can ultimately complete his bold mission, resulting in a perfect crime.

Because sometimes good people do bad things. And if there's one thing people hate, it's liars.
