fresno state computer engineering: *Equity in STEM Education Research* Alberto J. Rodriguez, Regina L. Suriel, 2022-09-06 This book focuses on the creative and transformative work of scholars who are advancing social justice through science/STEM education with limited resources. It draws attention to the significant body of work being conducted in various contexts so that readers could reflect and appreciate how much broader and transformative our impact could be if funding agencies, policy makers, and other researchers would widen their perspective and seek to promote social justice-driven scholarship. Public funding for STEM research on K-12 and teacher education that targets special populations is often limited and tends to favor mainstream research. This book contains case studies on innovative and promising STEM research with a focus on equity, diversity and social justice that are funded with limited or no public funding. It also presents anecdotes from authors in relation to their struggles in either securing funding for their reported study or seeking to publish its findings. This provides more context to the challenges of conducting non-mainstream research in science/STEM education. Most of the contributors are scholars of color and/or women conducting research with traditionally marginalized populations in science/STEM. Thus, this book offers an additional venue to share the voices of marginalized scholars and allies seeking to broaden our understanding of the challenges and successes of promoting equity, diversity, and social justice in various educational contexts.

fresno state computer engineering: Postmarks from a Political Traveler Phil Karber, 2015-11-17 As spring and summer vacations beckon, this book invites and incites a whole new approach to travel. *Postmarks from a Political Traveler* is a series of travel recollections confronting the troubling topics of roots and racism, polar bears and climate change, anti-Americanism, and the war in Afghanistan. The book opens with the story of the author's experience growing up in the Jim Crow South, traveling in apartheid South Africa, and living in the post-apartheid South Africa of 2009 and 2010. It explores the not-so-dissimilar roots and racism of the United States and South Africa, as well as the cross-fertilization of ideas between the two countries. The next installment chronicles two trips to Churchill, Manitoba, where the planet's largest population of polar bears congregate each October. It recounts the dramatic changes that have occurred in both the human and the polar bear communities in just the last decade and shows how the bears have become an Arctic version of the proverbial canary in the coalmine. Then the book shifts to the author's journey back to the United States on a German freighter with a rabidly anti-American captain. Woven into this account of life aboard a long haul ship are threads of the author's travels and anti-American encounters over a decade of living in Africa and Asia. The book concludes with reflections on trips to Afghanistan in 2004 and in 2012, describing the effects of war and conflict zone politics on women, education, refugees, and aid workers. What ties these episodes together is the author's commitment to social justice and to changing the world through travel and writing that is, affirming travel as a political act.

fresno state computer engineering: Making Your Major Decision Peterson's, 2013-09-30 Choosing a college major is one of the most important decisions students ever make, yet there is often confusion about picking the right discipline. Studies show that nearly two-thirds of all college freshman have not chosen a major, and nearly 60 percent of undergraduates change their major at least once resulting in lost time, money and productivity. To minimize the uncertainty in selecting the right major, Peterson's has partnered with industry leader, CPP the makers of the Myers-Briggs

Type Indicator. The MBTI was developed in the 1940s to make Carl Jung's theory of personality type understandable and useful in everyday life. This book will include access to a personality assessment to determine likes/dislikes and strengths/weaknesses to aid them in making sound decisions. The MBTI assessment, now priced at \$9.95, coupled with the descriptions of more than 800 college majors, including course requirements, related majors, and related careers, will provide students an invaluable resource for making The Major Decision.

fresno state computer engineering: Cyberclipper Jason O'Neil, 2017-04-24 This is a novel about a prince of Dubai, who devises a scheme to rob banks and casinos of hundreds of millions of dollars in what is perceived as a perfect crime. Prince Yousif Latif, who holds a PhD in Mathematics from UCLA, employs a large high-speed craft (HSC) made in Australia, which is outfitted as a megayacht suitable for a billionaire. The craft holds a secret cargo used to bypass computer protection software programs. Cybercrimes are staged around the world where the rich and famous reside: Monaco, Bermuda, Cabo San Lucas, Mexico. The book is filled with the exploits of the playboy prince, who has close friends sworn to secrecy and many others such as harbormasters, who are clueless as to the real purpose of the megayacht. Once the crimes are discovered, the International Police Organization (INTERPOL) is mobilized but, eventually, runs out of clues, resulting in a cold case. This is not a who-done-it novel in the usual sense because the reader is gradually brought into the plot and figures it out. However, the real mystery is whether the prince can ultimately complete his bold mission, resulting in a perfect crime.
