frick chemistry laboratory department of chemistry: *Strategies and Tactics in Organic Synthesis* Michael Harmata, 2013-07-29 A classic in the area of organic synthesis, *Strategies and Tactics in Organic Synthesis* provides a forum for investigators to discuss their approach to the science and art of organic synthesis. Rather than a simple presentation of data or a secondhand analysis, we are given stories that vividly demonstrate the power of the human endeavor known as organic synthesis and the creativity and tenacity of its practitioners. Firsthand accounts of each project tell of the excitement of conception, the frustration of failure and the joy experienced when either rational thought or good fortune gives rise to the successful completion of a project. This book series shows how synthesis is really done, and we are educated, challenged and inspired by these accounts, which portray the idea that triumphs do not come without challenges. We also learn that we can meet challenges to further advance the science and art of organic synthesis, driving it forward to meet the demands of society, in discovering new reactions, creating new designs and building molecules with atom and step economies that provide solutions through function to create a better world. - Presents state-of-the-art developments in organic synthesis - Provides insight and offers new perspective to problem-solving - Written by leading experts in the field

frick chemistry laboratory department of chemistry: *Aharon Katzir Memorial Volume* Henryk Eisenberg, Ephraim Katchalski-Katzir, Lionel A. Manson, 2012-12-06 It was a warm, sunny morning in Rehovot. The sky was clear as it always is in June. As I walked to the Institute that morning, too many cars were passing by, too many people were hurrying onto the Institute's grounds. No one was smiling, acquaintances were recognized by a slight nod of the head. When I turned the corner, a few people already had gathered on the lawn in front of the Jacob Ziskind building. This number was to swell to thousands before the service was over. We were to be joined by the President of Israel, its first Prime Minister, many members of the cabinet, and other great,

near-great, working colleagues, and residents of the town. The purpose of all this activity was written on everyone's face, and underlined by the casket that lay in the rotunda of the building. His wife was sitting there, his children, his brother, his students both past and present. One could hear the silence of the participants. I stood inside for a while, overlooking the rotunda. A long line of mourners filed by, offering their sympathies to the family. Suddenly a woman, dressed in black, fell to her knees in front of Rina, sobbing. It was the wife of the Japanese Ambassador to Israel. I moved to join the crowd outside. People were standing on the lawn, gingerly trying to avoid stepping on a flower.

frick chemistry laboratory department of chemistry: Strategies and Tactics in Organic Synthesis Erik J. Sorensen, David A. Siler, Jeffrey D. Mighion, 2013-07-29 This chapter defines risk-taking in organic synthesis as the deliberate pursuit of strategies that do not have near neighbors in the chemical literature. In these ventures into the unknown, chemical behavior can be difficult to predict. The literature of organic chemistry is replete with examples of powerful, bond-forming strategies that had little or no precedent when they were developed. This essay addresses some of those examples in an effort to demonstrate the merits of creative risk-taking in the planning and execution of organic syntheses.

Are they different from or even better than their predecessors? To answer this question, the authors of this book have journeyed into the past and present of laboratory architecture. They discuss the images of the research scientist and the laboratory that have been purveyed since the natural sciences were institutionalised in the nineteenth century. They also examine contemporary architectural solutions in the light of influential laboratory architectures of the latter half of the twentieth century, thereby discovering a great variety of approaches, historical and contemporary - for both the functional interrelation of spaces and the tension between symbolic façades and internal structures can take very different forms.
