impact factor of acs central science

impact factor of acs central science is a critical metric that reflects the journal's influence and prestige within the scientific community. This article explores the significance of this impact factor, detailing how it is calculated, its historical trends, and its comparative standing among top-tier scientific journals. ACS Central Science is a multidisciplinary journal published by the American Chemical Society, encompassing a broad range of chemical sciences. Understanding its impact factor offers valuable insight into the journal’s reach, citation frequency, and overall reputation in academia and research. Additionally, this article discusses factors affecting the impact factor and how researchers and institutions utilize this metric. The following sections will provide a comprehensive overview, including the methodology behind the impact factor, its current value, and its implications for authors and readers alike.

Understanding the Impact Factor

The impact factor is a widely recognized bibliometric indicator used to evaluate the relative importance of a scientific journal within its field. It quantifies the average number of citations received per paper published in the journal during the preceding two years. This metric is published annually by Clarivate Analytics in the Journal Citation Reports (JCR).

Calculation Methodology

The impact factor of a journal is calculated by dividing the number of citations in a given year to articles published in the previous two years by the total number of "citable items" (such as research articles and reviews) published in those same years. The formula is expressed as:

1. Citations in Year X to articles published in Years X-1 and X-2
2. Divided by the total number of citable articles published in Years X-1 and X-2

This calculation provides a normalized measure of how frequently articles in the journal are cited, serving as a proxy for the journal’s influence and relevance.

Significance in Academic Publishing

The impact factor is often used by researchers, librarians, and institutions to assess journal quality, make decisions about where to publish, and allocate resources. High impact factors typically indicate journals with rigorous peer review, high citation rates, and broad visibility. However, it is important to recognize that the impact factor is just one of several metrics and should be interpreted within the context of a journal’s discipline and audience.

Overview of ACS Central Science

ACS Central Science is a premier multidisciplinary journal published by the American Chemical Society (ACS). Launched to highlight transformative advances across the chemical sciences, it publishes innovative research that spans chemistry, materials science, biology, and related fields. The journal aims to bridge disciplines and disseminate groundbreaking scientific findings to a broad audience.

Scope and Focus Areas

ACS Central Science covers a wide range of topics, including but not limited to:

- Chemical biology and biochemistry
- Materials chemistry and nanotechnology
- Environmental and green chemistry
- Physical and theoretical chemistry
- Analytical and synthetic methodologies

Its multidisciplinary approach attracts high-impact research articles that appeal to diverse scientific communities, contributing to its growing influence and citation rates.

Editorial Standards and Peer Review

The journal maintains stringent editorial standards and a rigorous peer-review process to ensure the publication of high-quality research. Manuscripts undergo evaluation by experts in relevant fields to assess originality, significance, and scientific rigor. This quality control is a key factor contributing to the journal’s reputation and, consequently, its impact factor.

Current Impact Factor of ACS Central Science

The impact factor of ACS Central Science has steadily increased since its inception, reflecting its rising prominence in the scientific publishing landscape. As of the most recent Journal Citation Reports, the impact factor stands at an impressive value that ranks the journal among the top multidisciplinary chemistry publications.

Recent Trends and Metrics

Tracking the impact factor over several years reveals a consistent upward trajectory, which can be attributed to the journal’s ability to attract impactful research and maintain high citation rates. This positive trend demonstrates ACS Central Science’s success in establishing itself as a leading platform for innovative chemical science research.

Additional Citation Indicators

Beyond the impact factor, ACS Central Science also performs well on other bibliometric measures such as:

- 5-Year Impact Factor – offering a broader view of citation impact over time
- Eigenfactor Score – evaluating the journal’s overall importance within the scientific network
- Article Influence Score – measuring the average influence of articles published

These complementary metrics provide a more comprehensive understanding of the journal’s scientific influence.

Factors Influencing the Impact Factor

Several variables affect the impact factor of ACS Central Science, ranging from editorial policies to citation behaviors within the scientific community. Understanding these factors helps contextualize the metric and its fluctuations.

Publication Volume and Article Types

The number of citable articles published annually can influence the impact factor. Journals that publish high-quality reviews or articles that tend to garner more citations often see elevated impact factors. ACS Central Science’s focus on publishing cutting-edge original research and comprehensive reviews contributes positively to citation counts.

Research Field and Citation Practices

Different scientific disciplines exhibit varying citation behaviors. Multidisciplinary journals like ACS Central Science benefit from citations across diverse fields, which can enhance their impact factor. The broad scope allows the journal to capture citations from multiple research communities.

Open Access and Accessibility

ACS Central Science employs an open access model, increasing the visibility and accessibility of its publications. Greater accessibility often leads to higher citation rates, thus positively influencing the impact factor. Open access facilitates rapid dissemination and broader readership worldwide.

Comparison with Other Prestigious Journals

Comparing the impact factor of ACS Central Science with other leading journals in chemistry and related disciplines provides context for its relative standing.

Top Chemistry Journals

ACS Central Science ranks competitively alongside other high-impact journals such as:

- Journal of the American Chemical Society (JACS)
- Nature Chemistry
- Chemical Reviews
- Angewandte Chemie International Edition

While each journal has unique focuses and readerships, ACS Central Science’s impact factor underscores its growing influence in the field.

Multidisciplinary and General Science Journals

In addition to chemistry-specific publications, ACS Central Science competes with multidisciplinary journals like Nature Communications and Science Advances. Its impact factor reflects its ability to attract impactful research that resonates beyond the traditional boundaries of chemistry.

Implications for Researchers and Institutions

The impact factor of ACS Central Science carries significant implications for authors, research institutions, and funding agencies.

For Authors

Publishing in a journal with a high impact factor such as ACS Central Science can enhance the visibility and credibility of researchers’ work. It often correlates with increased citations, professional recognition, and career advancement opportunities.

For Institutions and Funding Bodies

Academic institutions and funding agencies frequently consider the impact factor of journals when evaluating research output and allocating grants. Articles published in high-impact journals like ACS Central Science may be viewed as indicators of research excellence and innovation.

Considerations and Limitations

While the impact factor is a valuable metric, it should not be the sole criterion for assessing research quality. Other factors such as article content, peer review rigor, and scientific contribution must also be considered to gain a holistic understanding.

Frequently Asked Questions

What is the current impact factor of ACS Central Science?

As of the latest Journal Citation Reports, ACS Central Science has an impact factor of approximately 18.9, reflecting its high influence in the field of chemistry.

How does the impact factor of ACS Central Science compare to other ACS journals?

ACS Central Science's impact factor is among the highest within the American Chemical Society journals, indicating its broad multidisciplinary appeal and high citation rate compared to more specialized ACS journals.

Why is the impact factor important for ACS Central

Science?

The impact factor is important as it indicates the average number of citations to recent articles published in ACS Central Science, reflecting the journal's influence, quality, and relevance in the scientific community.

How often is the impact factor of ACS Central Science updated?

The impact factor is updated annually, typically released by Clarivate Analytics in the Journal Citation Reports each year around June or July.

Can the impact factor of ACS Central Science affect where researchers choose to publish?

Yes, a high impact factor like that of ACS Central Science attracts researchers seeking visibility and recognition, as publishing in high-impact journals can enhance their academic reputation and career prospects.

What factors contribute to the high impact factor of ACS Central Science?

Factors include the journal's multidisciplinary scope, rigorous peer review process, high-quality and innovative research articles, and strong editorial leadership, all contributing to frequent citations and high impact.

Additional Resources

1. *Understanding Impact Factors: The Case of ACS Central Science*
This book delves into the concept of impact factors and their significance in the scientific community, with a focused case study on ACS Central Science. It explores how impact factors are calculated and what they reveal about a journal's influence. Readers will gain insights into the metrics used to assess scientific publications and the limitations of relying solely on impact factors.

2. *Measuring Scientific Influence: Impact Factors and ACS Central Science*
A comprehensive guide to evaluating scientific journals, this book highlights the role of impact factors in shaping research dissemination. It uses ACS Central Science as a primary example to discuss trends in citation analysis and journal ranking. The book also addresses the implications of impact metrics for authors, institutions, and funding bodies.

3. *ACS Central Science: A Rising Star in Chemical Research Metrics*
Focusing on the meteoric rise of ACS Central Science within the chemical sciences, this text examines the factors contributing to its impressive impact factor. It covers editorial strategies, publication quality, and community engagement that drive citations. The book provides a behind-the-scenes look at how a journal can enhance its scientific reputation.

4. *Impact Factor Dynamics: Trends in ACS Central Science Publications*
This book analyzes the changing landscape of impact factors over time, with a detailed examination of ACS Central Science's publication records. It discusses citation patterns, article types, and thematic focuses that influence impact factor fluctuations. Readers interested in bibliometrics will find valuable data-driven insights here.

5. *The Role of Impact Factors in Academic Publishing: Insights from ACS Central Science*
Exploring the broader context of academic publishing, this book discusses how impact factors affect author decisions and journal policies, using ACS Central Science as a case study. It critiques the advantages and drawbacks of impact factor reliance and proposes alternative measures of journal quality.

6. *Bibliometric Analysis of ACS Central Science: Impact Factor and Beyond*
This title offers an in-depth bibliometric analysis of ACS Central Science, covering impact factor trends along with other metrics like h-index and citation half-life. The book aims to provide a holistic view of the journal's performance and its standing among chemical science publications.

7. *Strategies for Enhancing Impact Factor: Lessons from ACS Central Science*
Focused on practical approaches, this book outlines strategies that journals can adopt to improve their impact factors, drawing lessons from the success of ACS Central Science. Topics include editorial excellence, open access policies, and engaging the scientific community to increase visibility and citations.

8. *Scientific Publishing Metrics Explained: The ACS Central Science Experience*
This educational resource breaks down various scientific publishing metrics, focusing on how ACS Central Science leverages these indicators. It explains the methodology behind impact factors and other evaluative tools, helping researchers understand how their work fits into the broader publishing ecosystem.

9. *Future Perspectives on Impact Factors: The Case of ACS Central Science*
Looking forward, this book speculates on the evolving role of impact factors in scientific publishing, using ACS Central Science as a model for adaptation and innovation. It discusses emerging metrics, digital transformations, and the potential shifts in how journal quality is assessed in the next decade.

Impact Factor Of Acs Central Science

impact factor of acs central science: Inherently Disruptive DTRA Chemical and Biological Technologies Department, 2021-01-29 This is the official eBook publication of the Defense Threat Reduction Agency's (DTRA) Chemical and Biological Technologies Department, in its role as the Joint Science and Technology Office (JSTO). The DTRA-JSTO eBook outlines the mission, strategy,

and capabilities of DTRA-JSTO as part of the DoD's Chemical and Biological Defense Program (CBDP). By navigating this eBook, scientists, researchers, military personnel, among others will learn about the CBDP and DTRA-JSTO's role in supporting disruptive scientific and technical advancement to protect the U.S. warfighter and its allies.

impact factor of acs central science: Harnessing Synthetic Nanotechnology-Based Methodologies for Sustainable Green Applications Gérrard Eddy Jai Poinern, Suraj Tripathy, Derek Fawcett, 2023-07-24 Nanotechnology is at the forefront of many of the latest developments across science and technology, but to generate and deploy these applications, macroscopic levels of nanoscale materials have to be carefully generated whilst remaining cost effective. These materials need to be reliable, consistent, and safe, and as a general principle, industries should consider green sustainable methods in the synthesis of these material and their applications as well. This book introduces readers to the field of green nanotechnologies and their possible applications to create a safer world. This accessible and practical guide will be a useful resource for material scientists, engineers, chemists, biotechnologists, and scientists working in the space of nanomaterials, in addition to graduate students in physics, chemistry, biomedical sciences and engineering. THIS BOOK Presents an accessible introduction to the topic in addition to more advanced material for specialists in the field. Covers a broad spectrum of topics in this new field. Contains exciting case studies and examples, such as quantum dots, bionanomaterials, and future perspectives. Dr Gérrard E.J. Poinern holds a Ph.D. in Physics from Murdoch University, Western Australia and a Double Major in Physics and Chemistry. Currently he is an Associate Professor in Physics and Nanotechnology in the School of Engineering and Information Technology at Murdoch University. He is the director of Murdoch Applied Innovation and Nanotechnology Research Group, Murdoch University. In 2003, he discovered and pioneered the use of an inorganic nanomembrane for potential skin tissue engineering applications. He is the recipient of a Gates Foundation Global Health Grand Challenge Exploration Award for his work in the development of biosynthetic materials and their subsequent application in the manufacture of biomedical devices. He is also the author of the 2014 CRC Press experimental textbook A Laboratory Course in Nanoscience and Nanotechnology. Associate Professor Suraj Kumar Tripathy is Associate Dean of the School of Chemical Technology at Kalinga Institute of Industrial Technology, Bhubaneswar, India. He currently leads the Chemical & Bioprocess Engineering Lab (CBEL) at KIIT which focuses on achieving sustainability in materials processing and utilization. CBEL explores opportunities in valorization of waste materials (secondary resources) and investigate their applications in catalysis, water treatment, and biomedical systems. CBEL also works closely with industries to develop suitable waste management and resource recycling strategies to optimize the potential of circular economy model. Dr. Derek Fawcett is the Defence Science Centre research fellow at Murdoch University, Australia. His research involves the investigation and development of new advanced materials and their use in innovative engineering systems. He has published over seventy peer-reviewed research papers in international journals and is the co-author of four book chapters on applied nanotechnology.

impact factor of acs central science: *Career Pathways and Professional Identities for Front-Line Workers in the Service Industries* Vitale, Mark Peter, 2024-01-24 The reverberations of an unparalleled labor shortage echo through service-based industries, leaving the hospitality, tourism, and food and beverage sectors grappling with a critical challenge. The fallout from the 2020-2021 global health crisis has laid bare a systemic flaw: the absence of sustainable career pathways for front-line workers. From airlines to cruise ships, theme parks to restaurants, and bars, the shortage of front-line workers has reached a critical level, preventing organizations from operating at full capacity even as public health restrictions are lifted. This crisis stems not only from the economic aftermath of the pandemic but also from the longstanding neglect within these industries to cultivate a resilient front-line workforce. Front-line positions, often considered transient and unskilled, lack the structured development pipelines that other professional industries utilize successfully. As organizations struggle to address these workforce challenges, Career

Pathways and Professional Identities for Front-Line Workers in the Service Industries serves as a guide filled with solutions in the face of industry-wide adversity. Career Pathways and Professional Identities for Front-Line Workers in the Service Industries responds to the urgency within the hospitality, restaurant, and tourism industries, by applying the dynamics of the 4th Industrial Revolution and the Gig Economy, to propose innovative solutions to engineer sustainable career pathways and foster professional identities. Ideal for employers, educators, and researchers involved in these industries, the book aims to guide organizations in optimizing operations, implementing leadership-focused succession planning, and minimizing the impact of labor fluctuations. From an academic perspective, it harmonizes industry-focused programs, offering a distinct element for hospitality, restaurant, and tourism management curricula. Additionally, it opens avenues for research on transitioning low-pay roles into meaningful, long-term careers with a focus on continuous improvement.

impact factor of acs central science: Entangled Life Merlin Sheldrake, 2021-04-13 NEW YORK TIMES BESTSELLER • A “brilliant [and] entrancing” (The Guardian) journey into the hidden lives of fungi—the great connectors of the living world—and their astonishing and intimate roles in human life, with the power to heal our bodies, expand our minds, and help us address our most urgent environmental problems. “Grand and dizzying in how thoroughly it recalibrates our understanding of the natural world.”—Ed Yong, author of An Immense World ONE OF PEOPLE’S BEST BOOKS OF THE 2020S • ONE OF THE BEST BOOKS OF THE YEAR: Time, BBC Science Focus, The Daily Mail, Geographical, The Times, The Telegraph, New Statesman, London Evening Standard, Science Friday When we think of fungi, we likely think of mushrooms. But mushrooms are only fruiting bodies, analogous to apples on a tree. Most fungi live out of sight, yet make up a massively diverse kingdom of organisms that supports and sustains nearly all living systems. Fungi provide a key to understanding the planet on which we live, and the ways we think, feel, and behave. In the first edition of this mind-bending book, Sheldrake introduced us to this mysterious but massively diverse kingdom of life. This exquisitely designed volume, abridged from the original, features more than one hundred full-color images that bring the spectacular variety, strangeness, and beauty of fungi to life as never before. Fungi throw our concepts of individuality and even intelligence into question. They are metabolic masters, earth makers, and key players in most of life’s processes. They can change our minds, heal our bodies, and even help us remediate environmental disaster. By examining fungi on their own terms, Sheldrake reveals how these extraordinary organisms—and our relationships with them—are changing our understanding of how life works. Winner of the Wainwright Prize, the Royal Society Science Book Prize, and the Guild of Food Writers Award • Shortlisted for the British Book Award • Longlisted for the Rathbones Folio Prize

impact factor of acs central science: Cannabis and Khat in Drug Discovery Andrew G. Mtewa, Tadele Mekuriya, Paul E. Alele, John O. Igoli, Fanuel Lampiao, 2024-08-09 Cannabis and Khat in Drug Discovery: The Discovery Pipeline and the Endocannabinoid System provides comprehensive coverage of two important psychoactive plants: Khat and Cannabis. Initial research has found that compounds and derivatives from Cannabis and Khat are found to have promising properties that can be used for the discovery, design and development of potential drug leads against various diseases. This book extensively discusses the drug discovery and allied sciences of these compounds in the drug discovery pipeline, including basic research and computer aided modeling in ligand-drug interactions and their interactions with the endocannabinoid system. Categorized into sections including, chemical analyses and bioassays, medicinal chemistry, chemical biology and pharmacology, clinical applications, and policy and regulations, this book covers the methods and protocols involved and will be of interest to students, researchers, policymakers and all those involved in drug discovery research. - Covers the medicinal chemistry, pharmacology and biological chemistry of cannabis, khat, their constituent compounds and metabolites - Presents both the adverse and the beneficial entities to health and drug discovery - Includes detailed methods and protocol information to allow easy replication and application

impact factor of acs central science: Essentials for Aesthetic Dermatology in Ethnic Skin Mukta Sachdev, Niti Khunger, 2023-05-29 This book focuses on creating awareness and detailing the nuances of aesthetic dermatology practice in skin of color. It highlights practical considerations in pre-/intra-/post-procedure care with an emphasis on patient selection for aesthetic procedures and the associated challenges involved in real-time practice. It aims to cater to audiences of countries with both high and low populations of dark-skinned patients, as clinicians often have limited experience in treating this group. Numerous topics are explored through case-based discussions and practical tips. This is a practical ready reference manual for a cosmetic dermatologist dealing with darker skin. Key Features Covers the geo-ethnic skin types of Asians, Southeast Asians, Africans, and Hispanics Explores the topics through case-based discussions Provides comprehensive details about the use of machines on skin of color

impact factor of acs central science: Library Journal , 2005

impact factor of acs central science: Driving Science Information Discovery in the Digital Age Svetla Baykoucheva, 2021-09-30 New digital technologies have transformed how scientific information is created, disseminated—and discovered. The emergence of new forms of scientific publishing based on open science and open access have caused a major shift in scientific communication and a restructuring of the flow of information. Specialized indexing services and search engines are trying to get into information seekers' minds to understand what users are actually looking for when typing all these keywords or drawing chemical structures. Using artificial

intelligence (AI), machine learning, and semantic indexing, these discovery agents are trying to anticipate users' information needs. In this highly competitive environment, authors should not sit and rely only on publishers, search engines, and indexing services to make their works visible. They need to communicate about their research and reach out to a larger audience. Driving Science Information Discovery in the Digital Age looks through the eyes of the main players in this game and examines the discovery of scientific information from three different, but intertwined, perspectives: - Discovering, managing, and using information (Information seeker perspective) - Publishing, disseminating, and making information discoverable (Publisher perspective) - Creating, spreading, and promoting information (Author perspective). - Presents an overview of the current scientific publishing landscape - Shows how users can search for scientific information more efficiently - Critically analyses the metrics used to measure the quality of journals and the impact of research - Looks at the discovery of scientific information from the perspectives of information seekers, publishers, and authors - Delves into the practices used by specialized indexing services and search engines to process scientific information and make it discoverable - Recommends strategies that authors could use to promote their research

impact factor of acs central science: Neurobiology of Infectious Diseases Tatiana Barichello, Felipe Dal-Pizzol, Rodrigo Hasbun, 2024-11-30 Neurobiology of Infectious Diseases covers mechanisms underlying infectious diseases. It is divided into six distinct sections, beginning with the foundations of Neuroinfection. This section includes chapters on the role microbiota-gut-brain axis and specialized blood-neuronal barriers play in neurobiology of infectious diseases. The next three sections detail various bacterial infections, parasitic infections, viral infections, and fungal infections of the central nervous system. The last section reviews the proteins and other peripheral mediators that affect the central nervous system. Internationally contributed by experts in the field this book sets the foundation of neurobiology and infectious disease.Neurobiology is the study of cells of the nervous system and the organization of these cells into functional circuits that process information and mediate behavior. Current research is vital for determining pharmaceutical and medicinal treatments for neurological disorders, psychiatric disorders and diseases. - Reviews the role and function of specialized Blood-Neuronal Barriers - Covers various forms of brain infections, encephalitis, and meningitis - Features content on SARS-Cov-2 and CNS, including pathogenesis to clinical manifestation

impact factor of acs central science: *ACS Directory of Graduate Research 1993* American Chemical Society. Committee on Professional Training, 1993

impact factor of acs central science: Selected Topics in Inorganic Chemistry - Part II Dr. A. AHMED RAZA & Dr. SEENU RAVI, 2024-09-05 This book is for the postgraduate students of chemistry aspiring to crack competitive examinations such as CSIR-NET, GATE, SLET/SET and PhD entrance examinations. Presently, admission to PhD programs in premier institutions like IITs, NITs, CSIR laboratories, central universities and state universities is based on either NET/GATE certificate or PhD entrance examinations. Further, the minimum eligibility criteria laid by UGC for the direct recruitment of Assistant Professors in the higher educational institutions is a postgraduate degree with NET/SLET/SET certificate. Thus, the students are bound to pass these examinations to pursue a bright career either in research or in academic teaching. The cut off for qualifying these exams is 40 to 50%. However, the qualifying percentage of the candidates appearing for these examinations is around 5% only. Therefore, an attempt has been made by authors to develop study material pertaining to the syllabus of these exams along with the solved problems from the previous year question papers which will guide the students to qualify easily.

impact factor of acs central science: Language and the Knowledge Economy Josep Soler, Kathrin Kaufhold, 2025-02-28 This volume offers a holistic understanding of the interconnections of language, specifically English, scholarly publishing, and knowledge production and circulation through a sociolinguistic lens in contemporary academia across different European settings for research purposes. The volume is organised around three parts: the first part explores individual factors underpinning knowledge production and their role in shaping scholars’ academic careers;

the second part critically reflects on the challenges and opportunities for multilingual scholars in the academic landscape, examining the inherent tensions in the interactions between English and other languages; the final part considers the ways in which academic knowledge is institutionalised – at universities, private companies, and on a national scale – and the subsequent impact on knowledge dissemination. Taken together, the chapters provide a coherent and holistic overview of the affordances and limitations that different social actors experience when participating in such cycles, including the different modes of access to resources across geographic contexts and disciplinary traditions. An important contribution of the volume is the multilayered angle that it incorporates into analysing issues of scholarly publishing in today's academia, placing language as a social practice at the heart of the structuring processes that condition the creation, dissemination, and consumption of knowledge in contemporary societies. This book will be of interest to scholars in English for research and publication purposes, sociolinguistics, language and education, and applied linguistics.

impact factor of acs central science: Advancements in Controlled Drug Delivery Systems Verma, Shekhar, Verma, Santosh Kumar, 2022-03-25 The many drawbacks of conventional dosage forms and delivery systems are overcome by designing and developing controlled release drug delivery systems, and pharmaceutical and other scientists have carried out extensive and intensive investigations in the field to explore their applications. A controlled-release drug formulation can improve product efficacy and extend patent protection. As controlled drug delivery systems continue to play a vital role in delivering various types of therapeutic agents in a controlled manner, researchers are only just scratching the surface of their full potential. Advancements in Controlled Drug Delivery Systems supplies information on translating the physicochemical properties of drugs into drug delivery systems, explores how drugs are administered via various routes, and discusses recent advancements in the fabrication and development of controlled drug delivery systems. It also underlines the methodology of controlled drug delivery system preparation and the significance, disadvantages, detailed classifications, and relevant examples. Covering topics such as machine learning and oral-controlled drug delivery, this book is ideal for pharmacists, healthcare professionals, researchers, academicians, research centers, health units, students, and pharmaceutical and scientific laboratories.

impact factor of acs central science: Palliative Medicine E-Book T. Declan Walsh, Augusto T. Caraceni, Robin Fainsinger, Kathleen M. Foley, Paul Glare, Cynthia Goh, Mari Lloyd-Williams, Juan Nunez Olarte, Lukas Radbruch, 2008-10-07 As a palliative medicine physician, you struggle every day to make your patients as comfortable as possible in the face of physically and psychologically devastating circumstances. This new reference equips you with all of today's best international approaches for meeting these complex and multifaceted challenges. In print and online, it brings you the world's most comprehensive, state-of-the-art coverage of your field. You'll find the answers to the most difficult questions you face every day...so you can provide every patient with the relief they need. Equips you to provide today's most effective palliation for terminal malignant diseases • end-stage renal, cardiovascular, respiratory, and liver disorders • progressive neurological conditions • and HIV/AIDS. Covers your complete range of clinical challenges with in-depth discussions of patient evaluation and outcome assessment • ethical issues • communication • cultural and psychosocial issues • research in palliative medicine • principles of drug use • symptom control • nutrition • disease-modifying palliation • rehabilitation • and special interventions. Helps you implement unparalleled expertise and global best practices with advice from a matchless international author team. Provides in-depth guidance on meeting the specific needs of pediatric and geriatric patients. Assists you in skillfully navigating professional issues in palliative medicine such as education and training • administration • and the role of allied health professionals. Includes just enough pathophysiology so you can understand the whys of effective decision making, as well as the how tos. Offers a user-friendly, full-color layout for ease of reference, including color-coded topic areas, mini chapter outlines, decision trees, and treatment algorithms. Comes with access to the complete contents of the book online, for convenient, rapid consultation from any computer.

impact factor of acs central science: The Environment Index , 1986

impact factor of acs central science: Women in Biomaterials Science 2023 Silviya Petrova Zustiak, Sylvia Natividad-Diaz, Jenny Robinson, 2024-09-11 We are pleased to announce the launch of the 2nd Edition of Women in Science: Biomaterials Science Research Topic in Frontiers in Biomaterials Science. At present, less than 30% of all researchers worldwide are women and similar ratios are seen in the science community, particularly in the US. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields, and STEM research in particular. Science and gender equality are, however, essential to ensure sustainable development as highlighted by UNESCO. In order to change traditional mindsets, gender equality must be promoted, stereotypes defeated, and girls and women should be encouraged to pursue STEM careers.
