in his hands family medicine: *The Nature of General Family Practice* W.E. Fabb, J.R. Marshall, 2012-12-06 The idea of producing this book of case histories from general family practice was only a twinkle in the editors' eyes until October 1980, when in a room in the Marriott Hotel in New Orleans, the editors met with John Fry, Joseph Levenstein and Bill Jackson to discuss new book

projects. The idea was put to the group, which endorsed it enthusiastically. Encouraged by this and by John Fry's advice, the conception of The Nature of General Family Practice took place. It was agreed that to illustrate the universal nature of general family practice it would be useful to collect case histories from all around the world, that for preference they should be brief, and that they should be ac companied by major questions and sub-questions, but no answers. The name 'Vignettes' was applied to these cases and their questions. Subsequently, well over a hundred family physicians were asked by letter to provide ten vignettes. Sixty doctors from ten countries accepted the invitation and forwarded their contributions during the second half of 1981. Almost all of those who, for a variety of reasons were unable to contribute, said they liked the idea and looked forward to using the final product. Altogether, over 600 vignettes were received, and 583 selected for final inclusion.

in his hands family medicine: Family Medicine J. L. Buckingham, E. P. Donatelle, W. E. Jacott, M. G. Rosen, Robert B. Taylor, 2013-06-29 JOHN S. MILLIS In 1966 the Citizens Commission on Graduate Medical Education observed that the explosive growth in biomedical science and the consequent increase in medical skill and technology of the twentieth century had made it possible for physicians to respond to the episodes of illness of patients with an ever-increasing effectiveness, but that the increase in knowledge and technology had forced most physicians to concentrate upon a disease entity, an organ or organ system, or a particular mode of diagnosis or therapy. As a result there had been a growing lack of continuing and comprehensive patient care. The Commission expressed the opinion that Now, in order to bring medicine's enhanced diagnostic and therapeutic powers fully to the benefit of society, it is necessary to have many physicians who can put medicine together again. ! The Commission proceeded to recommend the education and training of sub stantial numbers of Primary Physicians who would, by assuming primary responsi bility for the patient's welfare in sickness and in health, provide continuing and comprehensive health care to the citizens of the United States. In 1978 it is clear that the recommendation has been accepted by the public, the medical profession, and medical education. There has been a vigorous response in the development of family medicine and in the fields of internal medicine, pediatrics, and obstetrics. One is particularly impressed by the wide acceptance on the part of medical students of the concept of the primary physician. Dr. John S.

in his hands family medicine: Advanced Consulting in Family Medicine Peter Worrall, Adrian French, Les Ashton, 2018-04-19 What distinguishes the consulting of experienced family doctors from their newly qualified colleagues? The question is often frustratingly hard answer clearly or objectively: unlike many professions, family doctors face a dearth of clear expectations of what constitutes advanced practice, a lack of defined standards against which to evaluate it, and an absence of expertise-related professional training in which to develop it post-certification. The model of consultation excellence outlined in this book illustrates in practical terms how advanced consulting can be nurtured. It avoids tantalising value judgement such as 'excellence'. Instead, it describes behaviours in terms that can be observed day to day, providing a detailed picture of what

constitutes advanced consulting behaviour, how family doctors can be helped to acquire these higher levels of expertise, and how changes in behaviour can be identified and evaluated. Advanced Consulting in Family Medicine is written in handbook form for easy access and use, and provides a vital vision of higher order family doctor consulting.
