in the language of adam david butler: The Encyclopedia of Best Films Jay Robert Nash, 2019-10-23 This all-inclusive A-Z encyclopedia by one of the world's foremost experts on cinema provides comprehensive annotations of the best films produced from 1914 on. The work offers more than 5,000 three- to five-star entries (three stars=good; four stars=excellent; five stars=masterpiece), and yes, author Jay Robert Nash has viewed every single one of them as well as many more that did not make the cut. In addition to a precis, each film's entry also includes a listing of the cast as well as the key principles involved in production, from the director to the hair stylist. Especially unique to this book is a rating system that helps parents determine whether or not a film is appropriate for their children. Unlike the industry rating system which can be influenced by studio lobbying, Nash objectively evaluates each film and confers upon it one of four recommendations for viewing: recommended, acceptable, cautionary, and unacceptable. Backmatter includes a list of top films by genre (i.e. animated, drama, sports, mystery, adventure etc.) as well as an annotated name index listing all persons mentioned along with their dates of birth and death. Rounding out this essential volume for the film buff are over 500 still photos from the author's private collection.

in the language of adam david butler: The Music of Franz Liszt Michael Saffle, 2018-04-09 Much of Franz Liszt's musical legacy has often been dismissed as 'trivial' or 'merely showy,' more or less peripheral contributions to nineteenth-century European culture. But Liszt was a mainstream composer in ways most of his critics have failed to acknowledge; he was also an incessant and often extremely successful innovator. Liszt's mastery of fantasy and sonata traditions, his painstaking settings of texts ranging from erotic verse to portions of the Catholic liturgy, and the remarkable self-awareness he demonstrated even in many of his most 'entertaining' pieces: all these things stamp him not only as a master of Romanticism and an early Impressionist, but as a precursor of Postmodern 'pop.' Liszt's Music places Liszt in historical and cultural focus. At the same time, it examines his principal contributions to musical literature -- from his earliest operatic paraphrases to his final explorations of harmonic and formal possibilities. Liszt's compositional methods, including his penchant for revision, problems associated with early editions of some of his works, and certain aspects of class and gender issues are also discussed. The first book-length assessment of Liszt as composer since Humphrey Searle's 1956 volume, Liszt's Music is illustrated with well over 100 musical examples.

in the language of adam david butler: Essays on Nominal Determination Henrik Høeg Müller, Alex Klinge, 2008-07-09 This volume brings together scholars of diverse theoretical persuasions who all share an interest in capturing the role that nominal determination and reference assignment play in the complicated interplay between thought, language and communication. The articles can be divided roughly into five main areas of concern: the conceptual level of determination; the emergence and function of articles; their semantic contribution to nominal interpretation; the morphology and syntax of determiners; and the interplay and contrasts between articles, demonstratives and possessives. Thus, linguistic and philosophical issues in the subject field of nominal determination are addressed at all interface levels between morphology, syntax, semantics and pragmatics. This volume shows that different theoretical frameworks may be brought fruitfully together in the effort to formulate new analyses of well-known problems, but also to raise new questions and point to new areas which may prove interesting topics for future research both in functional and formal paradigms.

in the language of adam david butler: Cross-Linguistic Semantics Cliff Goddard, 2008-04-10 Cross-linguistic semantics – investigating how languages package and express meanings differently – is central to the linguistic quest to understand the nature of human language. This set of studies explores and demonstrates cross-linguistic semantics as practised in the natural semantic metalanguage (NSM) framework, originated by Anna Wierzbicka. The opening chapters give a state-of-the-art overview of the NSM model, propose several theoretical innovations and advance a number of original analyses in connection with names and naming, clefts and other specificational sentences, and discourse anaphora. Subsequent chapters describe and analyse diverse phenomena in ten languages from multiple families, geographical locations, and cultural settings around the globe. Three substantial studies document how the metalanguage of NSM semantic primes can be realised in languages of widely differing types: Amharic (Ethiopia), Korean, and East Cree. Each constitutes a lexicogrammatical portrait in miniature of the language concerned. Other chapters probe topics such as inalienable possession in Koromu (Papua New Guinea), epistemic verbs in Swedish, hyperpolysemy in Bunuba (Australia), the expression of momentariness in Berber, ethnogeometry in Makasai (East Timor), value concepts in Russian, and “virtuous emotions” in Japanese. This book will be valuable for linguists working on language description, lexical semantics, or the semantics of grammar, for advanced students of linguistics, and for others interested in language universals and language diversity.

O'Gorman, 2015-06-29 This book argues that there are a number of contemporary novels that challenge the reductive 'us and them' binaries that have been prevalent not only in politics and the global media since 9/11, but also in many works within the emerging genre of '9/11 fiction' itself.

in the language of adam david butler: Making Speeches Tom Hurst, 2025-03-20 Having recently passed the 40th anniversary of Margaret Thatcher's entry into Number 10 Downing Street, the burgeoning field of Thatcher studies continues to attract the attention of scholars and students alike. The dense array of literature has thus far comprehensively covered Thatcher's politics, personal life and famous speeches, but the approaches she took to her speech writing have hitherto been overlooked. By consulting a variety of primary sources such as the Churchill archives which house Thatcher's papers Tom Hurst deftly presents a comprehensive account of Margaret Thatcher's Speechmaking. By encompassing the creation, delivery and dissemination of the speeches before concluding with a focus on the reception of these speeches in an unprecedented digital age, Hurst fills an existing gap. By focusing on the oft-overlooked staff who helped Thatcher draft her speeches □ and in so doing, shaped Thatcherism from behind the scenes □ Hurst promotes an entirely original work that unveils the Iron Lady's reliance on her speechmakers, which has previously been unexplored.

in the language of adam david butler: Adam Smith's "The Theory of Moral Sentiments"

John McHugh, 2021-09-09 Many contemporary readers are just now discovering Adam Smith's *The Theory of Moral Sentiments* (TMS). It is increasingly being recognised as a foundational text in moral philosophy and in Adam Smith's oeuvre more generally. This is the first companion to guide readers through TMS and uncover what Smith thinks, why he thinks it, why he might be wrong to think it! While Adam Smith is best known for a *Wealth of Nations* there is a history of seriously misinterpreting this text as an unnuanced celebration of unfettered capitalism. *The Theory of Moral Sentiments* is a kind of corrective to these naïve readings. As such, any serious consideration of Adam Smith's work should also include TMS. John McHugh's guide provides detailed analysis of TMS while never losing sight of the text in the context of Smith's writings and world view more generally. It offers both an introduction to the importance and insight of TMS while also functioning as a great way in to Adam Smith as a philosopher.

in the language of adam david butler: Time in Languages, Languages in Time

Anna Čermáková, Thomas Egan, Hilde Hasselgård, Sylvi Rørvik, 2021-09-17 This volume comprises a collection of contrastive studies on language and time. Languages represented include Czech, French, German, Mandarin, Norwegian and Swedish, all of which are contrasted with English. While the amount of published research on temporal relations in general is considerable, less work has been carried out on comparing how we talk about time in various languages and how languages change over time. Several methodological challenges are addressed and solutions proposed, such as how to deal with poor quality historical data and how to identify n-grams in typologically different languages for purposes of comparison. The results of the various studies show how multilingual corpora can increase our knowledge of language-specific features as well as linguistic, typological and cultural differences and similarities across languages.

in the language of adam david butler: Experiential Constructions in Yucatec Maya

Elisabeth Verhoeven, 2007-01-01 This book combines a fieldwork-based language-specific analysis with a typological investigation. It offers a detailed and comprehensive analysis of the form and semantics of experienter constructions in Yucatec, the Mayan language of the Yucatecan peninsula in Mexico. Since the linguistic expression of experience is not restricted to a specific grammatical area the study touches a great variety of grammatical fields in the language such as argument structure, grammatical relations, possessive constructions, subordinate constructions, etc. The empirical analysis of the Yucatec data is preceded by a thorough examination of the functional domain and the cross-linguistic coding of experience which until now could not be found in the literature. This study will be of interest to scholars working in the fields of typology and Native American linguistics, and especially to those interested in argument structure and the syntax-semantics interface.

in the language of adam david butler: Semantic Primes and Universal Grammar

Bert Peeters, 2006-08-16 This volume is part of a research program which started with the publication, in 1972, of Anna Wierzbicka's groundbreaking work on Semantic Primitives. The first within the program to focus on a number of typologically similar languages, it proposes a French, Spanish, Portuguese and Italian version of the Natural Semantic Metalanguage (NSM) elaborated over the years by Wierzbicka and colleagues. Repetition is avoided through teamwork: a number of authors

working on the languages under examination have had equal input in a set of five papers dealing with distinct parts of the metalanguage. Some of the findings presented here invite us to have a fresh look at what has already been achieved, and to amend some of the working hypotheses of the NSM approach accordingly. The volume also contains six case studies (on Italian *sfogarsi*, Portuguese *saudades*, Spanish *crisis*, French *certes*, Spanish expressions of sincerity and Italian and Spanish diminutives, respectively).

in the language of adam david butler: *Datives and Other Cases* Daniel Hole, André Meinunger, Werner Abraham, 2006-04-19 This volume provides a state-of-the-art account of research into datives and other morphological cases. The contributors, among them leading scholars in the field, present fresh insights into traditional issues such as the dichotomy between lexical and structural case, and open up fascinating new areas of research. A recurrent feature of the majority of contributions is their combined syntax-semantics perspective. Germanic varieties, Serbian, Albanian and other Balkan languages alongside Chinese, Japanese, Tagalog are discussed from various theoretical angles such as mainstream generativism, lexical-functional grammar, and functional typology. Despite the broad range of facts spanning the distance between acquisition data and dialectology, the papers are connected by a renewed interest in form-function correspondencies. This volume will be welcomed by theoretical linguists and typologists with an interest in argument and event structure, linguists studying the case systems of individual languages and researchers in search for up-to-date discussion of Germanic datives.

in the language of adam david butler: *Three-participant Constructions in English* An Laffut, 2006-01-01 This study aims to give a systematic and comprehensive description of the constructions involved in three important types of alternation: the locative alternation, which is by far the most researched of the three, the image impression alternation and the material/product alternation. The author looks at the constructions as part of alternation, but also looks beyond the alternations, and analyzes and describes the constructions in their own right. They are analyzed as three-participant constructions with relational complements, construing causation of the three main subtypes of relations, namely intensive, circumstantial and possessive relations. Particular attention is paid to the concept of holicity, to the status of the prepositional phrase, and to collocational properties, which play a key role in the decision as to which alternate should be regarded as the unmarked one within its construction paradigm. The approach taken is inspired by systemic functional grammar and can broadly be characterized as cognitive-functional.

in the language of adam david butler: *Types of Variation* Terttu Nevalainen, Juhani Klemola, Mikko Laitinen, 2006-06-01 This volume interfaces three fields of linguistics rarely discussed in the same context. Its underlying theme is linguistic variation, and the ways in which historical linguists and dialectologists may learn from insights offered by typology, and vice versa. The aim of the contributions is to raise the awareness of these linguistic subdisciplines of each other and to encourage their cross-fertilization to their mutual benefit. If linguistic typology is to unify the study of all types of linguistic variation, this variation, both diatopic and diachronic, will enrich typological research itself. With the aim of capturing the relevant dimensions of variation, the studies in this volume make use of new methodologies, including electronic corpora and databases, which enable cross- and intralinguistic comparisons dialectally and across time. Based on original research and unified by an innovative theme, the volume will be of interest to both students and teachers of linguistics and Germanic languages.

in the language of adam david butler: *Text and Discourse Connectedness* Maria-Elisabeth Conte, János S. Petőfi, Emel Sözer, 1989-01-01 The 35 papers in this volume provide a comprehensive picture of crucial aspects of connectedness. The papers are divided into three main groups: the papers in the first group deal with particular questions of the text-constituting role of anaphora, deixis, coreference, modality, conjunctions and particles, theme, topic, ellipsis, etc., the second group of papers discusses the connectedness in texts/discourses of different types (narrative texts, stories, horoscopes, anecdotes, poems, comics, etc.), and, finally, the papers in the third group discuss general theoretical/methodological questions concerning connectedness.

in the language of adam david butler: *The Role of Semantic, Pragmatic, and Discourse Factors in the Development of Case* J?hanna Bar?dal, Shobhana Lakshmi Chelliah, 2009 This volume focuses on non-syntactic factors in the development of case by illustrating the integral role of pragmatics, semantics, and discourse structure in the historical development of morphologically marked case systems. Examined fifteen typologically diverse languages from four different language families: (i) Indo-European: Vedic Sanskrit, Russian, Greek, Latin, Latvian, Gothic, French, German, Icelandic, and Faroese; (ii) Tibeto-Burman, especially the Bodic languages and Meithei; (iii) Japanese; and (iv) the Pama-Nyungan mixed language Gurindji Kriol.

in the language of adam david butler: Agency and Impersonality Mutsumi Yamamoto, 2006-01-01 In this monograph the author probes the fundamental nature of the concept of agency and its importance to human language and cognition. Whereas previous studies focused on grammatical manifestations this original work addresses such issues as the strong relationship between agency and responsibility, a philosophical interpretation of the concept of agency and a variety of epistemic attitudes towards agency that strongly influence our view of the world. Different cultures and languages process and express agency differently. To illustrate the co-relation between the linguistic expressions of agency and cultural stereotypes that lurk behind individual natural languages, the author analyses Japanese and English parallel corpora. It is shown that English tends to highlight agency in expressing actions and events, whereas Japanese largely obfuscates agency through impersonalising potential agents. Through the case studies on these languages this book sheds light on the close connection between language, thought and culture and contributes to the resurging interest in linguistic relativity.
