indeed speech pathology jobs: Real Men Don't Sing Allison McCracken, 2015-09-17 The crooner Rudy Vallée's soft, intimate, and sensual vocal delivery simultaneously captivated millions of adoring fans and drew harsh criticism from those threatened by his sensitive masculinity. Although Vallée and other crooners reflected the gender fluidity of late-1920s popular culture, their challenge to the Depression era's more conservative masculine norms led cultural authorities to stigmatize them as gender and sexual deviants. In *Real Men Don't Sing* Allison McCracken outlines crooning's history from its origins in minstrelsy through its development as the microphone sound most associated with white recording artists, band singers, and radio stars. She charts early crooners' rise and fall between 1925 and 1934, contrasting Rudy Vallée with Bing Crosby to demonstrate how attempts to contain crooners created and dictated standards of white masculinity for male singers. Unlike Vallée, Crosby survived the crooner backlash by adapting his voice and persona to adhere to white middle-class masculine norms. The effects of these norms are felt to this day, as critics continue to question the masculinity of youthful, romantic white male singers. Crooners, McCracken shows, not only were the first pop stars: their short-lived yet massive popularity fundamentally changed American culture.

indeed speech pathology jobs: Learning Partnerships Marcia B. Baxter Magolda, Patricia M. King, 2023-07-03 While a common goal of higher education is to improve student learning to prepare young adults for the professional, civic and personal challenges of their lives, few institutions have a model to facilitate these outcomes. Learning Partnerships offers a grounded theory and practical examples of how these objectives can be achieved at the college course, program, and institutional levels. The book takes as its foundation Marcia Baxter Magolda's Learning Partnerships Model based on her seventeen-year longitudinal study of young adults' learning and development from their undergraduate years through their thirties. Based on nearly a thousand participant narratives, the model offers an empirically grounded yet flexible approach to promote self-authorship. Marcia Baxter Magolda describes the nature of self-authorship--its centrality to the learning goals of cognitive maturity, an integrated identity, mature relationships, and effective citizenship--and the Model. The book then documents examples of actual practice and the learning outcomes they have yielded. The settings include community college and undergraduate courses, exchange and internship programs, residential life, a Masters' program, faculty development and student affairs organization. Learning Partnerships offers models for all educators--faculty and student affairs staff alike--who work to balance guidance and learner responsibility to prepare students for the complexity of the twenty-first century.

These dynamics are illustrated throughout the book through the use of fictitious educators who portray staff dealing with situations to which

readers can relate. In each chapter, readers will find an action plan designed to provide tools that educators should utilize in surviving internal politics.

indeed speech pathology jobs: **No Ordinary School** Colleen Gray, 2015-09-01 In 1913, Oxford-educated Margaret Gascoigne left England for Montreal in search of new opportunities. In 1915 she established a small school for six students in the study of her downtown Montreal home - the modest but aspiring beginning of what would become known as The Study. Presenting lively images, oral testimonies, and material gleaned from the school's archives, No Ordinary School explores the evolution of The Study through world wars, the Great Depression, the Quiet Revolution, and many stages of feminism, from its predominantly English Montreal origins into the bilingual and multicultural community that it is today. Always at the forefront of the most progressive educational developments, The Study has encouraged generations of women to transcend the boundaries of their times. Influential alumni include the physicist and Canadian Department of External Affairs civil servant Dorothy Osborne Xanthaky, avant-garde artist Marian Dale Scott, former chief curator and director of the McCord Museum of Canadian History Isabel Barclay Dobell, world-renowned architect Phyllis Lambert, internationally acclaimed pianist Janina Fialkowska, Olympic rowing medalist Andr  anne Morin, and tennis star Eugenie Bouchard. Firmly grounded in a wider historical context, No Ordinary School celebrates an exceptional educational institution while paying tribute to its illustrious past and promising future.

indeed speech pathology jobs: *Medicare's Histories* Esyllt W. Jones, James Hanley, Delia Gavrus, 2022-05-27 Medicare is arguably Canada's most valued social program. As federally-supported medicare enters its second half-century, Medicare's Histories brings together leading social and health historians to reflect on the origins and evolution of medicare and the missed opportunities characterizing its past and present. Embedding medicare in the diverse constituencies that have given it existence and meaning, contributors inquire into the strengths and weaknesses of publicly insured health care and critically examine medicare's unfinished role in achieving greater health equity for all people in Canada regardless of race, status, gender, class, age, and ability. Fundamental to the stories told in Medicare's Histories is the essential role played by communities—of activists, critics, health professionals, First Nations, patients, families, and survivors—in driving demands for health reform, in identifying particular omissions and inequities exacerbated or even created by medicare, and in responding to the realities of medicare for those who work in and rely on it. Contributors to this volume show how medicare has been shaped by politics (in the broadest sense of that word), identities, professional organizations, and social movements in Canada and abroad. As COVID lays bare social inequities and the inadequacies of health care delivery and public health, this book shows what was excluded and what was—and is—possible in health care.

A comprehensive and coordinated federal effort is urgently needed to bolster U.S. competitiveness and pre-eminence in these areas. This congressionally requested report by a pre-eminent committee makes four recommendations along with 20 implementation actions that federal policy-makers should take to create high-quality jobs and focus new science and technology efforts on meeting the nation's needs, especially in the area of clean, affordable energy: 1) Increase America's talent pool by vastly improving K-12 mathematics and science education; 2) Sustain and strengthen the nation's commitment to long-term basic

research; 3) Develop, recruit, and retain top students, scientists, and engineers from both the U.S. and abroad; and 4) Ensure that the United States is the premier place in the world for innovation. Some actions will involve changing existing laws, while others will require financial support that would come from reallocating existing budgets or increasing them. Rising Above the Gathering Storm will be of great interest to federal and state government agencies, educators and schools, public decision makers, research sponsors, regulatory analysts, and scholars.
