math state exam 2018: The School-to-Prison Pipeline Peter Thalheim, 2022-05-02 The school-to-prison pipeline is not what it is popularly advertised to be by the major media, whereby the installation of safety officers and security personnel in schools to protect the learning environment for all the students leads to mostly young men of color getting a record for disruptive behavior and being channeled into prison as the logical result of attending K-12 public schools. Rather, the school-to-prison pipeline is a conduit opened and maintained by the statists, those who promote the state before the citizen, to keep as many students as possible in the public school monopoly so that the two leading teacher unions, the National Education Association and the American Federation of Teachers, maintain as many dues-paying members as possible and to increase the number of dues payers, regardless of its impact on our children. The promoters of the school-to-prison pipeline deny African American, Hispanic, Asian, white, and other students of color from high-needs socioeconomic backgrounds a choice of where to go to school. If these parents or guardians want their children to go to a public charter or to use a voucher to select another private option, that is where the inquiry should end--the simple choice by their parents and guardians. Instead, the state wins by keeping more people in the state-run pipeline. The public unions win by keeping more unionized school staff and keeping the dues gravy train coming in to support unions, who in turn use

their political strength to help elect candidates who favor unionized public schools versus school choice for our children and young people. How do the children win if their education options are artificially restricted? The students lose by being blocked in sometimes failing public schools with no viable choice to go elsewhere. And the poorer you are, the fewer choices you generally have. This denial of school choice would particularly impact black students, as blacks have disproportionately less money than the average American.

math state exam 2018: Race to the Bottom Luke Rosiak, 2022-03-08 Everyone wants: High schoolers to graduate well-prepared for jobs. Improved STEM literacy. Greater achievement for inner-city children. Happiness for all children. So why are liberals spending billions of dollars working against those goals? In Race to the Bottom, Luke Rosiak uncovers the shocking reason why American education is failing: Powerful special interest groups are using our kids as guinea pigs in vast ideological experiments. These groups' initiatives aren't focused on making children smarter—but on implementing a radical agenda, no matter the effect on academic standards. Nonprofits pump billions into initiatives meant to redress racial inequities. Rather than fixing the problem, districts with a big gap between white and black test scores hire consultants who claim the tests are meaningless because they are "racist." These consultants' judgments allow school districts to ignore their own failures—ultimately hurting minority students and perpetuating racism. That is just one example. Drawing on his years in investigative journalism, Rosiak did a deep dive into school files, financial records, and parents' stories. What he found is that nonprofit influence has crept into the educational bureaucracy all over America. Corrupt school boards and quack diversity consultants abound. Teachers drawing government pay claim it's unsafe to return to in-person

school, but “double dip” teaching in-person private classes. And amid all this focus on money and equity, academic standards are crumbling, which hurts American kids in ways we’ll be suffering for decades. *Race to the Bottom* is the first comprehensive exposé of the way radical ideology and self-serving administrators are destroying academic quality in America’s K-12 schools. Rigorous and deeply-researched, this is essential reading for anyone who cares about the future of our kids.

math state exam 2018: The Roots of Low Achievement Sandra Stotsky, 2019-07-02 The chief purpose of this book is to explain how public education in this country became dysfunctional as a result of the education policies and programs funded by the federal government to address low academic achievement. It highlights student effort as a central factor in academic achievement, based on research noting its significance. Teachers and school administrators cannot make children ready for college or career by grade 12 if their parents do not make them ready for school learning by kindergarten or grade 1. Once both the schools and students’ parents together made students ready for membership in our civic culture. They learned they were politically equal to each other, with a shared civic identity, regardless of academic achievement. Yet, policy makers at USED and philanthropists in this country with a professed interest in the education of low achievers want low achievers to believe that their academic status is all that matters and that they haven’t succeeded academically because of bigoted teachers, administrators, and communities. Parent/school partnerships need to revive their community’s agreed-upon mission for public education if we are to alter the roots of low achievement in this country.
