math wrath new vegas: Anger in the Air Joyce A. Hunter, 2016-04-15 The new realities of airline travel came into full focus after the September 11 terrorist attacks. These horrific events escalated air rage incidents by 400%, but more importantly they put the entire airline industry under the spotlight. In subsequent years, the general public began to voice frustrations with the industry in very dramatic ways, a marked shift in consumer behavior from that of before 9/11. The International Transport Workers Federation responded with a call to action to bring about major changes to raise the airline industry to a level of service quality sufficient to meet the needs of 21st Century passengers. The quality of services that airline customers expect and the propensity toward air rage needs to be understood. Undoubtedly, some passengers are prone to air rage by factors in no way related to customer service. However, a better understanding of the customer's perception of service and airlines' offerings is one way of addressing the air rage crisis, combating the contributing factors long before they conspire to provoke a damaging incidence. Anger in the Air: Combating the Air Rage Phenomenon provides airlines with valuable input to help them better meet the service expectations of their customers and avoid instances of air rage on their flights. What do today's customers need and expect? What do airline customers perceive as the quality of services

and how can the gap be closed between expectations and perceptions? The book addresses these key issues in five stages: 1.

math wrath new vegas: Energy, Information, Feedback, Adaptation, and Self-organization Spyros G Tzafestas, 2018-01-03 This unique book offers a comprehensive and integrated introduction to the five fundamental elements of life and society: energy, information, feedback, adaptation, and self-organization. It is divided into two parts. Part I is concerned with energy (definition, history, energy types, energy sources, environmental impact); thermodynamics (laws, entropy definitions, energy, branches of thermodynamics, entropy interpretations, arrow of time); information (communication and transmission, modulation-demodulation, coding-decoding, information theory, information technology, information science, information systems); feedback control (history, classical methodologies, modern methodologies); adaptation (definition, mechanisms, measurement, complex adaptive systems, complexity, emergence); and self-organization (definitions/opinions, self-organized criticality, cybernetics, self-organization in complex adaptive systems, examples in nature). In turn, Part II studies the roles, impacts, and applications of the five above-mentioned elements in life and society, namely energy (biochemical energy pathways, energy flows through food chains, evolution of energy resources, energy and economy); information (information in biology, biocomputation, information technology in office automation, power generation/distribution, manufacturing, business, transportation), feedback (temperature, water, sugar and hydrogen ion regulation, autocatalysis, biological modeling, control of hard/technological and soft/managerial systems), adaptation and self-organization (ecosystems, climate change, stock market, knowledge management, man-made self-organized controllers, traffic lights control).

math wrath new vegas: Good Luck Sir...Sorry You Lose! George M. Dean, 2020-04-10 Good Luck Sir... Sorry You Lose! is a lighthearted, sometimes quirky, look at the Las Vegas gaming business, through the eyes of a casino dealer. It follows the author's dealing career, told in chronological order, from 1980 until his retirement in 2018. During that time, he experienced lessons that were never taught in dealer's school, such as staying composed while encountering irate and contemptible personalities. And those were just the other dealers. Our author also delves into the mind-set of the true gambler. From the desperation of the local player trying to parlay his meager buy-in into the two-week late rent on his apartment, to the high-rolling whale who thinks nothing of continuing to wager two hundred thousand dollars per hand in baccarat. Throughout this book, there is some laughter and there is tragedy, but in the end, one comes to realize that this truly is a study in humanity.
