math summer camps 2024: *Women and Girls in STEM Fields* Heather Burns Page, 2024-09-19 Written by a respected science educator and advocate for women and girls in STEM fields, this one-stop resource provides a rich overview of efforts to provide women and girls with greater access to educational and career opportunities in traditionally male-dominated STEM fields. Since the passage of Title IX, the numbers of American women working in STEM fields have increased, particularly in the social and biological sciences. Nonetheless, women continue to be underrepresented in STEM disciplines, accounting for less than a third of the current STEM workforce. When the intersection of sociocultural factors such as race, ethnicity, and socioeconomic background are examined alongside gender, some demographic groups of women continue to lag in terms of representation in all STEM fields. The reasons cited for this continued state of affairs remain hotly debated, even as efforts intensify to break down longstanding gender barriers and bring women and girls into the worlds of science, technology, engineering, and mathematics. *Women and Girls in STEM Fields* provides wide-ranging, complementary coverage of every aspect of the issue, from the historical barriers that confronted generations of American women and girls interested in pursuing careers in various STEM disciplines to the laws and movements that dismantle some of those obstacles. Features include smartly organized chapters on major trends, issues, debates, and historical moments; carefully selected profiles of the key organizations and individuals that have shaped discussions of this subject in Washington, D.C. and across the USA; a suite of original essays from educators, scholars, and women writing about their firsthand experiences in today's STEM world.

math summer camps 2024: The Bright Survivor Sharon Shih, 2024-01-12 The Bright Survivor is a memoir offered in a unique second-person, mother-to-son approach. The mother provides a detailed story about how her son grew up in a small family of the first-generation immigrants in Canada. Her son was born in Toronto when she and her husband were in their forties, finishing school and starting a new career. When they immigrated to Canada after his birth, the immigration officer asked them to “make sure that he gets all that a Canadian deserves.” It took twenty years. The family of three explored and overcame several learning curves. For many years, being with his parents was rare for the boy because his parents always worked full-time. He grew up with Chinese nannies, home cares, after-school programs, and extra-curricular lessons. For summer and winter breaks, he was busy with camps and sometimes family trips. In his primary school years, the boy was fine but had little patience in group settings and split-grade classes. His parents pursued a better fit for his education. He eventually felt in the right place with the International Baccalaureate program at high school and went to a co-op program for his college education to become an engineer. His mother wondered sometimes if the home she had provided could have been more relaxing and better appreciated. Her generation never had the time or resources. Her version of his childhood is marked by persistent effort in a diverse world, always with an open mind and often with love and happiness.

math summer camps 2024: Disability Politics and Theory, Revised and Expanded Edition A.J. Withers, 2024-05-09T00:00:00Z Disability Politics and Theory, a historical exploration of the concept of disability, covers the late nineteenth century to the present, introducing the main models of disability theory and politics: eugenics, medicalization, rehabilitation, charity, rights and social and disability justice. A.J. Withers examines when, how and why new categories of disability are created and describes how capitalism benefits from and enforces disabled people’s oppression. Critiquing the currently dominant social model of disability, this book offers an alternative. The radical framework Withers puts forward draws from schools of radical thought, particularly feminism and critical race theory, to emphasize the role of interlocking oppressions in the marginalization of disabled people and the importance of addressing disability both independently and in conjunction with other oppressions. Intertwining theoretical and historical analysis with personal experience, this book is a poignant portrayal of disabled people in Canada and the U.S. — and a call for social and economic justice. This revised and expanded edition includes a new chapter on the rehabilitation model, expands the discussion of eugenics, and adds the context of the growth of the disability justice movement, Black Lives Matter, calls for defunding the police, decolonial and Indigenous land protection struggles, and the COVID-19 pandemic.

math summer camps 2024: Math-ish

Jo Boaler, 2024-05-07 From Stanford professor, author of *Limitless Mind*, youcubed.org founder, and leading expert in the field of mathematics education Jo Boaler comes a groundbreaking guide to finding joy and understanding by adopting a diverse approach to learning math. "Every once in a while, someone revolutionizes an approach to a difficult subject and changes it forever. That is what Jo Boaler has done for math. Fresh, smart, and inclusive, Jo Boaler's strategy eschews the one-size-fits-a-few approach and instead allows math to be seen and solved by everyone. A huge achievement. Math-ish is the only math book I've ever enjoyed reading in my entire life. Honestly." -Bonnie Garmus, author of *Lessons in Chemistry* Mathematics is a fundamental part of life, yet every one of us has a unique relationship with learning and understanding the subject. Working with numbers may inspire confidence in our abilities or provoke anxiety and trepidation. Stanford researcher, mathematics education professor, and the leading expert on math learning Dr. Jo Boaler argues that our differences are the key to unlocking our greatest mathematics potential. In *Math-ish*, Boaler shares new neuroscientific research on how embracing the concept of "math-ish"—a theory of mathematics as it exists in the real world—changes the way we think about mathematics, data, and ourselves. When we can see the value of diversity among people and multi-faceted approaches to learning math, we are free to truly flourish. Utilizing the latest research on math education, Jo guides us through seven principles that can radically reframe our relationship with the subject:

- The power of mindset on learning
- Utilizing a visual approach to math
- The impact of physical movement and communication on understanding
- Understanding the value of an ish perspective - in mathematics and beyond
- The importance of connected and flexible knowledge
- New data on diverse teaching modes that work with different learning styles, not against them
- The value of diversity in learning mathematics—and beyond

When mathematics is approached more broadly, inclusively, and with a greater sense of wonder and play—when we value the different ways people see, approach, and

understand it—we empower ourselves and gain a beneficial understanding of its value in our lives.

math summer camps 2024: *Becoming Great Universities* Richard J. Light, Allison Jegla, 2024-08-06 *Becoming Great Universities* arose from co-author Richard J. Light's visits over the past twenty years to more than 250 campuses and his conversations with presidents, administrators, faculty, and students. Light and co-author Allison Jegla have distilled the topics arising from these conversations into the ten chapters that frame their book, with emphasis on the prospect of promoting a culture of continuous innovation for creating value for students. This book is precisely about the university's teaching and student development mission-not research. The overwhelming evidence in the higher education literature asserts that it is on the teaching and education side that our colleges and universities are most challenged, and therefore that is where the greatest improvements can and must be made. Light and Jegla's message to higher education leaders is that improving performance depends to a great extent on their purposeful development of the institution's culture as a community, and on leveraging this culture through the encouragement of constructive working relationships across all sectors of campus, including administration, staff, faculty, and students. Their chapters cover the following topics: how to help students from under-resourced backgrounds; how to encourage students to invest their time and talents beneficially; how to attract students from non-traditional backgrounds to campus; how to improve learning outcomes through innovative teaching; how to assess learning; how to productively elicit student opinions, ideas, and advice; how to facilitate constructive interaction among students from differing backgrounds; how to build opportunities for lifelong learning; and how to inspire students to think globally. Throughout their book, Light and Jegla emphasize practical lessons for promoting measures of innovation on each front.
