math teacher thank you quotes: Teachers with Class Marsha Serling Goldberg, Sonia Feldman, 2003-03-02 Teachers with Class celebrates teachers and the art of good teaching. Almost everyone has had a special teacher at some point-one who saw potential where others did not, one who made ideas come alive, one who taught more than what was in the textbook. In Teachers with Class, 30 famous and not-so-famous people thank their favorite teachers with essays that praise the difference a good teacher makes. James Earl Jones honors the high school English teacher who helped him overcome his stutter and learn to speak comfortably out loud. An architect recalls a teacher's belief in the unlikeliest student. Three-time Pulitzer Prize-winner, Thomas Friedman, remembers the teacher who inspired his career in journalism by imparting lessons that are relevant today. One man tells of the math teacher whose patience and guidance gave him the confidence to succeed as a physician and researcher. These stories will spark memories about the special teachers in your own life. You can use the dedication page provided at the beginning of the book to inscribe a note to say thank you to a favorite teacher. Or, to really say thank you, use the list of grants and awards for teachers featured in the book to nominate a teacher who made a positive impact on your life. A portion of the proceeds from Teachers with Class will go to the National Education Association (NEA) Foundation.

math teacher thank you quotes: Math Exchanges Kassia Omohundro Wedekind, 2011 Traditionally, small-group math instruction has been used as a format for reaching children who struggle to understand. Math coach Kassia Omohundro Wedekind uses small-group instruction as the centerpiece of her math workshop approach, engaging all students in rigorous math exchanges. The key characteristics of these mathematical conversations are that they are: 1) short, focused sessions that bring all mathematical minds together, 2) responsive to the needs of the specific group of mathematicians, and 3) designed for meaningful, guided reflection. As in reading and writing workshop, students in math workshop become self-directed and independent while participating in a classroom community of learners. Through the math exchanges, students focus on number sense and the big ideas of mathematics. Teachers guide the conversations with small groups of students, mediating talk and thinking as students share problem-solving strategies, discuss how math works, and move toward more effective and efficient approaches and greater mathematical understanding. Although grounded in theory and research, *Math Exchanges: Guiding Young Mathematicians in Small Group Meetings* is written for practicing teachers and answers such questions as the following: How can I use a math workshop approach and follow a certain textbook or set of standards? How should I form small groups? How often should I meet with small groups? What should I focus on in small groups? How can I tell if my groups are making progress? What do small-group math exchanges look like, sound like, and feel like?
