Curriculum and Academic Requirements

The curriculum of the medicine health and society major at Vanderbilt is carefully structured to provide a comprehensive education in both theoretical and practical aspects of health and society. Students complete core courses, electives, and experiential learning components to fulfill graduation requirements.

Core Courses

Core courses focus on foundational knowledge in social theories of health, medical ethics, health policy, and the history of medicine. These classes provide students with essential frameworks to understand health phenomena within societal contexts. Examples of core topics include the social determinants of health, epidemiology, and cultural perspectives on illness.

Elective Options

Students may choose from a variety of electives tailored to their interests within the field. Electives cover areas such as global health, bioethics, health communication, mental health, and healthcare disparities. This flexibility allows students to specialize in areas relevant to their career goals or academic interests.

Capstone and Experiential Learning

A significant component of the major is the senior capstone project, which requires students to conduct original research or comprehensive analysis on a topic related to medicine, health, and society. Additionally, the program encourages participation in internships, volunteer work, or study abroad programs focused on health care settings or public health organizations.

Research and Experiential Learning Opportunities

Vanderbilt offers numerous research and practical learning opportunities for students pursuing the medicine health and society major. These experiences are integral to applying classroom knowledge to real-world health challenges and developing professional skills.

Undergraduate Research Programs

Students can engage in faculty-led research projects that explore diverse aspects of medicine and health in social contexts. Research topics often include health disparities, policy analysis, community health initiatives, and the impact of medical technology on society. Vanderbilt provides funding and mentorship to support student research endeavors.

Internships and Fieldwork

Internships with hospitals, public health departments, non-governmental organizations, and policy think tanks offer hands-on experience. These placements allow students to observe and contribute to health care delivery, health education, and advocacy efforts in various settings. Fieldwork opportunities also help students build professional networks and gain insights into career pathways.

Study Abroad and Global Health Exposure

The program encourages global health experiences through study abroad programs or international internships. Exposure to health systems in different cultural and socioeconomic contexts enriches students' understanding of global health challenges and medical pluralism.

Career Paths and Professional Outcomes

The medicine health and society major at Vanderbilt equips graduates with versatile skills applicable to a broad range of careers in health, policy, research, and education. The interdisciplinary training fosters strong analytical, communication, and problem-solving abilities valued by employers in multiple sectors.

medicine health and society major vanderbilt: *Structural Competency in Mental Health and Medicine* Helena Hansen, Jonathan M. Metzl, 2019-03-28 This book documents the ways that clinical practitioners and trainees have used the "structural competency" framework to reduce inequalities

in health. The essays describe on-the-ground ways that clinicians, educators, and activists craft structural interventions to enhance health outcomes, student learning, and community organizing around issues of social justice in health and healthcare. Each chapter of the book begins with a case study that illuminates a competency in reorienting clinical and public health practice toward community, institutional and policy level intervention based on alliances with social agencies, community organizations and policy makers. Written by authors who are trained in both clinical and social sciences, the chapters cover pedagogy in classrooms and clinics, community collaboration, innovative health promotion approaches in non-health sectors and in public policies, offering a view of effective care as structural intervention and a road map toward its implementation. Structural Competency in Mental Health and Medicine is a cutting-edge resource for psychiatrists, primary care physicians, addiction medicine specialists, emergency medicine specialists, nurses, social workers, public health practitioners, and other clinicians working toward equality in health.

medicine health and society major vanderbilt: Education in Global Health Policy Making and Management Eduardo Missoni, Fabrizio Tediosi, 2013-11-17T00:00:00+01:00 Global health has been increasingly recognized as a key element of sustainable development. The recent increase in the number of public and private global health actors and the complex global governance for health boosted the need for professionals who combine a thorough understanding of health-related challenges with multidisciplinary training in social sciences, economics, and management. In the past few years, this has led, not only to the mushrooming of courses dedicated to global health, but also academic degrees in global health. By reviewing a recent attempt to innovate the educational offerings in global health policy and management by a consortium of academic institutions in Italy, the book analyzes the recent trends in global health education. The book concludes that while global health and development is certainly an emerging area in the higher education systems of many countries, international offerings in graduate programs are still highly dominated by those taught in medical schools, often failing to combine health sciences with economic, social, and management sciences. The multidisciplinary nature of global health education programs should be improved.

medicine health and society major vanderbilt: Medical Education, Politics and Social Justice Alan Bleakley, 2020-12-30 This book critically analyses how politics and power affect the ways that medicine is taught and learned. Challenging society's historic reluctance to connect the realm of politics to the realm of medicine, *Medical Education, Politics and Social Justice: The Contradiction Cure* emphasizes the need for medical students to engage with social justice issues, including global health crises resulting from the climate emergency, and the health implications of widening social inequality. Arguing for an increased focus on community-based learning, rather than acute care, this innovative text maps the territory of medicine's contradictory engagement with politics as a springboard for creative curriculum design. It demonstrates why the socially disempowered - such as political and climate refugees, the homeless, or those without health insurance should be primary subjects of attention for medical students, while exploring how political engagement can be refined, sharp, cultivated and creative, engaging imagination and demanding innovation Exploring how the medical humanities can promote engagement with politics to improve medical education, this book is a ground-breaking and inspiring contribution. It is an essential read for all those with a focus on medical education and medical humanities, as well as medical and healthcare students with an interest in the social determinants of health.

medicine health and society major vanderbilt: **Climate and Health Education: Defining the Needs of Society in a Changing Climate** Cecilia Sorensen, Gaurab Basu, Lisa H. Patel, Arianne Teherani, 2023-11-16 The adverse effects of climate change are now apparent and present urgent and complex challenges to human health and health systems globally. There is an imperative

for quick action on many fronts: to recognize and respond to climate-health threats; prevent climate change at its source by reducing greenhouse gas emissions; support “greener” systems throughout the economy, including healthcare; understand the health co-benefits of adaptation and mitigation; and communicate effectively about these issues. Climate change is intertwined with historical and structural inequities and effective solutions must actively improve health equity. To meaningfully address these deep and interconnected issues, there is a growing imperative across the educational landscape to move beyond existing constraints toward new ways of thinking and learning. Many have recognized that we must create societal systems that account for the health of all people now and into the future while simultaneously preserving and improving the environment on which our life depends. Such transformations rest on the skills, knowledge, values, and attitudes of the workforce, not just in health and health care, but within all sectors. However, despite the health crisis of climate change at our doorstep, development of climate and health curricula is nascent, although is a growing consideration of leaders globally. Because the health impacts from climate and planetary change are so myriad and intertwined, sectors must work together like never before to move beyond existing silos of practice to a shared landscape and vision – in practice, but first in education.
