Mediq physical therapy often incorporates modalities such as stretching, strengthening, balance training, and neuromuscular re-education to optimize physical performance.

Key Components of Mediq Physical Therapy

The core elements of mediq physical therapy include comprehensive evaluations, goal-oriented exercise programs, and hands-on techniques delivered by licensed therapists. Treatment may also utilize advanced technologies and therapeutic equipment to enhance outcomes. The facilities are equipped with modern tools and supportive environments conducive to effective therapy. This professional setting enables patients to receive high-quality care that addresses their unique rehabilitation needs efficiently.

Understanding Aquatic Therapy

Aquatic therapy, also known as hydrotherapy, is a specialized form of physical therapy conducted in water. Utilizing the physical properties of water, such as buoyancy, resistance, and temperature, aquatic therapy creates an ideal environment for therapeutic exercise and movement. This modality is particularly beneficial for patients who experience pain or mobility restrictions on land, as water reduces joint stress and facilitates easier motion.

Principles of Aquatic Therapy

The therapeutic use of water allows for controlled movement and gradual progression of exercises. Buoyancy supports body weight, decreasing load on joints and muscles, while water resistance provides a natural strengthening stimulus. Warm water enhances circulation and muscle relaxation, further contributing to pain relief and improved function during aquatic therapy sessions.

Types of Aquatic Therapy Techniques

Various techniques are employed within aquatic therapy, including:

- Water walking and jogging
- Resistance exercises using water weights or paddles
- Balance and coordination drills
- Stretching and range-of-motion activities supported by water buoyancy
- Hydrostatic pressure applications to reduce swelling and improve circulation

Benefits of Combining Physical and Aquatic Therapy

Integrating mediq physical therapy with aquatic therapy offers synergistic advantages that enhance patient recovery. The complementary nature of these therapies allows clinicians to address limitations encountered in traditional land-based therapy by leveraging the supportive environment of water. This combination facilitates a more comprehensive rehabilitation process.

Enhanced Mobility and Reduced Pain

Aquatic therapy reduces joint loading and pain, enabling patients to perform movements that might be difficult or painful on land. This increased mobility supports the progression of physical therapy exercises, allowing for earlier intervention and improved functional gains.

Improved Muscle Strength and Endurance

Water resistance provides a unique opportunity to strengthen muscles safely and effectively. When combined with targeted physical therapy regimens, patients experience enhanced muscle endurance and coordination, which are critical for restoring daily function and preventing re-injury.

Psychological and Emotional Benefits

The soothing properties of water and the supportive atmosphere of aquatic therapy contribute to reduced anxiety and increased motivation in patients undergoing rehabilitation. This holistic approach aids in maintaining patient engagement and adherence to therapy programs.

Conditions Treated with Mediq Physical Therapy & Aquatic Therapy

Mediq physical therapy & aquatic therapy address a broad spectrum of musculoskeletal, neurological, and post-surgical conditions. The versatility of this dual approach makes it suitable for various patient populations requiring rehabilitative care.

Common Conditions

- Orthopedic injuries such as sprains, fractures, and post-operative recovery
- Chronic pain syndromes including arthritis and fibromyalgia
- Neurological disorders such as stroke, multiple sclerosis, and spinal cord injuries
- Sports-related injuries and performance rehabilitation
- Pediatric developmental disorders and mobility impairments

Specialized Applications

In addition to general rehabilitation, mediq physical therapy & aquatic therapy are employed in managing balance disorders, improving cardiovascular fitness, and facilitating weight-bearing

exercises in a controlled aquatic environment. This adaptability ensures that therapy is customized to the patient's clinical presentation and recovery objectives.

What to Expect During Treatment Sessions

Patients participating in mediq physical therapy & aquatic therapy can anticipate a structured and patient-centered approach. Initial evaluations inform the design of individualized treatment plans that integrate both land and water-based therapies.

Assessment and Goal Setting

The process begins with a thorough assessment of the patient's physical capabilities, medical history, and rehabilitation goals. Therapists develop measurable objectives to guide progression and monitor improvements throughout the course of treatment.

Therapy Session Structure

Sessions typically include a combination of manual therapy, therapeutic exercises on land, and aquatic activities. The duration and frequency of sessions vary depending on the patient's condition and response to treatment, with ongoing adjustments made to optimize outcomes.

Patient Education and Home Exercise Programs

Education on proper body mechanics, injury prevention, and self-management strategies is an integral part of the therapy process. Patients are often provided with home exercise programs to reinforce gains made during supervised sessions and promote long-term wellness.

mediq physical therapy aquatic therapy: *Contextualizing Aquatic Rehabilitative Practices in Canada* Alyssa Ashton, 2018 This thesis explored the current context of aquatic rehabilitative practices in Canada. More specifically, three inter-related topics on Aquatic Therapy (AT) and Aquatic Physical Therapy (APT) in Canada were examined: 1) the development of knowledge, training and expertise on APT and AT, 2) recognition and acceptance of cultural and social authority

on AT and APT (Starr, 1982), and 3) the practitioners' perceptions of barriers to practicing and participation in aquatic therapy. Semi-structured qualitative interviews were conducted with seven (7) stakeholders including Ontario aquatic physical therapists, aquatic therapists, instructors on aquatic therapy and members of the College of Physiotherapy of Ontario (CPO) and the Canadian Physiotherapy Association (CPA). Interviews were complimented with open-ended questionnaires sent to Chairs of Physical Therapy programs in seven Canadian Universities. Our research identified the most common means of acquiring knowledge on aquatic rehabilitative practices was through University Physiotherapy program curriculum; private training courses; and in-house within facilities where aquatic therapists and aquatic physical therapists are employed. This thesis also examined facilitators/barriers to practicing and receiving aquatic therapy and aquatic physical therapy. Through critical analysis, this thesis reflected on the ways in which social and cultural authority (Starr, 1982) are constructed within the field of aquatic therapy (AT) and aquatic physical therapy (APT). Recommendations and areas for future research included specialized training courses by scope of practice, and increased in-pool practicum training within Physiotherapy programs in Canada.
