ponce de leon health: Love and the Incredibly Old Man Lee Siegel, 2008-11-15 "It was the best of times, it was the worst of times" begins one chapter of critically acclaimed Lee Siegel's new novel, *Love and the Incredibly Old Man*. "In the beginning" starts another. What else can a novelist

do when hired as a ghostwriter by an elderly, irascible, conquistador-costumed man claiming to be the 540-year-old Juan Ponce de León? The fantastic life of that legendary explorer—inventor of rum, cigars, Coca-Cola, and popcorn—is the frame for Siegel's fourth chronicle of love, lies, luck, loss, and labia. Summoned with cold hard cash and a pinch of flattery, a professor and novelist named Lee Siegel finds himself in Eagle Springs, Florida, attempting to give form to the life of the man who, contrary to popular and historical opinion, did indeed find the Fountain of Youth. Spending humid days listening to the romantic ramblings of the old man and sleepless nights doubting yet trying to craft these reminiscences into a narrative that will satisfy the literary aspirations of his subject, Siegel the ghostwriter spins an improbable tale filled with Native Americans, insatiable monarchs, philandering cantors, deliriously passionate nuns, delicate actresses, androgynous artists, and deceptions small and large. For de León, and for Siegel too, centuries of conquest and colonialism, fortune and identity, are all refracted through the memories of the conquistador's lovers, each and every one of them adored "more than any other woman ever." Comic, melancholic, lusty, and fully engaged with the act of invention, whether in love or on the page, *Love and the Incredibly Old Man* continues the real Lee Siegel's exuberant exploration of that sentiment which Ponce de León confesses has "transported me to the most joyous heights, plunged me to the most dismal depths, and dropped me willy-nilly and dumbfounded at all places in between."

ponce de leon health: *Healing Like Our Ancestors* Edward Anthony Polanco, 2024-08-27 Offering a provocative new perspective, *Healing Like Our Ancestors* examines sixteenth- and seventeenth-century Nahua healers in central Mexico and how their practices have been misconstrued and misunderstood in colonial records. Early colonial Spanish settlers defined, assessed, and admonished Nahua *titiçih* (healing specialists) and *tiçiyotl* (healing knowledge) in the process of building a society in Mexico that mirrored Iberia. Nevertheless, Nahua survivance (intergenerational knowledge transfer) has allowed communities to heal like their ancestors through changes and adaptations. Edward Anthony Polanco draws from diverse colonial primary sources, largely in Spanish and Nahuatl (the Nahua ancestral language), to explore how Spanish settlers framed *titiçih*, their knowledge, and their practices within a Western complex. Polanco argues for the usage of Indigenous terms when discussing Indigenous concepts and arms the reader with the Nahuatl words to discuss central Mexican Nahua healing. In particular, this book emphasizes the importance of women as *titiçih* and highlights their work as creators and keepers of knowledge. These vital Nahua perspectives of healing—and how they differed from the settler narrative—will guide community members as well as scholars and students of the history of science, Latin America, and Indigenous studies.

It examines the linkages that exist around SRHR issues between the two regions and how this understanding can help to support the protection of sexual and reproductive health and rights both in Africa and the Caribbean. It focuses on providing historical, conceptual and contextual understandings of SRHR issues in the African continent and the Caribbean region. The main topics engage theoretical and contemporary issues, e.g., limitations to the single use of courts as avenues for reducing obstetric violence, abortion rights, maternal mortality, gender-based violence, and adolescent sexuality. The book presents diverse perspectives in the examination of SRHR issues by offering legal, socio-political, and medical frameworks for analysing and understanding sexual and reproductive health and rights. It further contributes to the discourse and strategies to protect the sexual and reproductive health and rights of women and men to improve both women's and men's quality of life/well-being and to also achieve gender equality.

Gordon Leitch, Douglas Seaton, 2008-04-30 Now in its Fifth Edition, *Crofton and Douglas's Respiratory Diseases* has firmly established itself as the leading clinical textbook on diseases of the chest. Presented, for the first time, as a two-volume set, this classic text has been completely rewritten and greatly expanded. Extensive revisions ensure that these volumes present an up-to-date

review of all aspects of lung disease . The contributions of some 18 leading authorities ensure that each area is comprehensively covered and new to this edition are chapters on the genetics of lung disease, smoking, air pollution, sleep apnoea, diving, lung transplantation and medico-legal aspects. The changes in content reflect the pace of change in the areas concerned not only in terms of understanding of the disease processes but also their treatment. The single chapter on asthma that appeared in previous editions, has now been expanded into three chapters covering epidemiology, mechanisms and management, reflecting the enormous research effort currently underway following a marked increase in the incidence of this disease in recent years. This new edition continues to provide an excellent reference both for the trainee and specialist in respiratory medicine, as well as the general physician. It will be extremely useful on the ward and in the office, where clinical problems arise and questions are asked which need clear answers.

ponce de leon health: *Perspectives in Life Cycle Impact Assessment* Patrick Hofstetter, 2012-12-06 *Perspectives in Life Cycle Impact Assessment: A Structured Approach to Combine Models of the Technosphere, Ecosphere and Valuesphere* describes the relationship between subjective and objective elements in Life Cycle Impact Assessment. It suggests a new framework which will allow people to master two of the major problems associated with LCA, the difficulty of separating subjective from objective elements and the tendency for impact assessment to record 'phantoms' rather than actual damages. *Perspectives in Life Cycle Impact Assessment: A Structured Approach to Combine Models of the Technosphere, Ecosphere and Valuesphere* presents a proposal for a second generation framework and method for Life Cycle Impact Assessment. Many of the suggested elements are either based on other tools for environmental analysis, e.g. risk assessment, or fit in well with tools and concepts such as industrial ecology, technology assessment, or environmental impact assessment. The research presented in this book goes beyond the scope of presently used methods for Life Cycle Assessment and may stimulate new developments in a variety of areas. The book will appeal to persons from a wide range of scientific disciplines who are interested in learning more about Life Cycle Assessment. It will be especially valuable to members of SETAC and to students and researchers in the fields of environmental impact assessment, risk assessment and industrial ecology.
