prime revival research institute: Journal Of Urusvati Himalayan Research Institute

Roerich Museum, 2003-08 The Journal of the Urusvati Himalayan Research Institute (U.J.) represents the multi-layered perceptions of the Roerichs, who sought new integration of cultural patterns and scientific frontiers in ever-expanding horizons. Every volume contains a contribution on archaeology as a science to reveal how nations became powerful and why they fell. They are a lesson for the governments of today who must act upon them (Sir Flinders Petrie, UJ.1.11). The art of excavation by Count du Buisson (UJ.1.13) links the art of archaeology with the technique of medicine: for all scientific methods are observing facts, experimentation, and manifestation. His excavations at Qatna show the guiding principles, methodology and discoveries of excavation. The second volume of the Journal carries a report of the important discoveries in Indian archaeology at Taxila, Mohenjo-daro, Stein's explorations in Baluchistan and Waziristan, and so on. The third volume relates some outstanding discoveries in Baluchistan, Taxila, Mohenjo-daro, Sarnath, Nalanda, Paharpur, Nagarjunakonda, Pagan and Afghanistan. They have changed the historiography of India and today they bring back the thrill of discovery as we read them seventy years after their reportage in this Journal in 1933. George Roerich (1.27f) himself writes on the problems of Tibetan archaeology and the several desiderata in this terra incognita in his day. In the second volume the diary of the 1931 expedition to Western Tibet of Dr. W.N. Koelz is vivid account of the region in its prime simplicity.

prime revival research institute: **Peak Japan** Brad Glosserman, 2019-04-01 The post-Cold War era has been difficult for Japan. A country once heralded for evolving a superior form of capitalism and seemingly ready to surpass the United States as the world's largest economy lost its way in the early 1990s. The bursting of the bubble in 1991 ushered in a period of political and economic uncertainty that has lasted for over two decades. There were hopes that the triple catastrophe of March 11, 2011—a massive earthquake, tsunami, and accident at the Fukushima Daiichi nuclear power plant—would break Japan out of its torpor and spur the country to embrace change that would restart the growth and optimism of the go-go years. But several years later, Japan is still waiting for needed transformation, and Brad Glosserman concludes that the fact that even disaster has not spurred radical enough reform reveals something about Japan's political system and Japanese society. Glosserman explains why Japan has not and will not change, concluding that Japanese horizons are shrinking and that the Japanese public has given up the bold ambitions of previous generations and its current leadership. This is a critical insight into contemporary Japan and one that should shape our thinking about this vital country.

prime revival research institute: *Citizenship, Security And Democracy Muslim Engagement With The West* Wanda Krause, 2009-01-01 Citizenship, Security and Democracy provides greater analysis of and seeks solutions to the challenges of citizenship, security and democracy through fresh and more varied perspectives as is related to Islamic discourse and Muslim communities and their activism in the West. These concerns have never been more pressing than today. Democracy has been a global endeavour and concern, as in its ideal form, it gives promise to liberty, freedoms and rights. However, after especially 9/11 and 7 /7, securitization has become a more immediate goal, making security the driving discourse today. But, both security and democracy are becoming ever less attainable in today's climate of increased division and cleavages along ideological lines and Islamophobia - an acute problem for citizenship in humanity. On September 1-3, 2006, the Association of Muslim Social Scientists (AMSS UK) and the Foundation for Political, Economic and Social Research (SETA) held a three day conference to explore the challenges of democracy and security and, importantly, explore issues around citizenship and identity of Muslim diaspora. Given the backdrop to a growing political discourse on the Muslim 'Other', framed through the events of 9/11 and 7 /7 and increased tension as a result of this discourse framing, the aim was to help discern causes to the major challenges facing governments and the safety, freedoms and dignity of individuals globally. This was attempted through the study of Islamic thought and on-the-ground case study research of Muslim societies and communities. This conference marks one of the major events to have been organised where such a large number of scholars, experts, and activists from a wide range of ideological positions and professional backgrounds come together in an ambitious attempt to resolve the most pressing issues at the turn of the 21st century. Editor. These papers have been published to widen discourse, stimulate debate, and hopefully pave the way for further research. Doubtless readers may agree with some of the issues raised, and disagree with others, but it is hoped that overall both general and specialised readers will benefit from the perspectives offered and some of the more focused issues examined in the book.

prime revival research institute: Governing Climate Change in Southeast Asia Jens Marquardt, Laurence L. Delina, Mattijs Smits, 2021-12-07 This volume showcases the diversity of the politics and practices of climate change governance across Southeast Asia. Through a series of country-level case studies and regional perspectives, the authors in this volume explore the complexities and contested nature of climate governance in what can be considered as one of the most dynamic and multi-faceted regions of the world. They reflect upon the tensions between

authoritarian and democratic climate change governance, the multiple roles of civil society and non-state interventions, and the conflicts between state planning and market-driven climate change governance. Shedding light on climate change mitigation and adaptation efforts in Southeast Asia, this book presents the various formal and informal institutions of climate change governance, their relevant actors, procedures, and policies. Empirical findings from a diverse set of environments are merged into a cross-country comparison that allows for elaborating on similar patterns whilst at the same time highlighting the distinct features of climate change governance in Southeast Asia.

Drawing on case studies from all Southeast Asian countries, namely Brunei Darussalam, Cambodia, Indonesia, Laos, Malaysia, Myanmar, the Philippines, Singapore, Thailand, Timor-Leste, and Viet Nam, this book will be of great interest to students, scholars, and practitioners dealing with climate change and environmental governance.

prime revival research institute: Geography of Education Colin Brock, 2016-09-22 Geography of Education sets out the scope of this emergent, interdisciplinary field. It illustrates the essential affinity of geographical and educational studies, by emphasising the geographical factors influencing formal education systems and other forms of knowledge transfer. Colin Brock begins by arguing the theoretical synergy that exists between the nature of both geography and educational studies as disciplines. This is then exemplified by an analysis of the emergence of systems of schooling under the influence of religious, political and economic forces. The author also considers informal and non-formal modes of education, and argues that the huge diversity of such provision creates a rich resource for research into geographies of education. In the final chapters the author turns his attention to the role of cyberspace, which has its own geography, in learning, and considers education as a form of humanitarian response to issues of environmental sustainability. By bringing together a wide range of themes and topics relating to both education and geography, Colin Brock argues that the geographical approach should inform the evolution of all types of educational provision around the world.

Featuring a new introduction by Hines biographer Louis Hatchett and a valuable guide to the art of carving, this classic cookbook serves up a satisfying slice of twentieth-century Americana, direct from the kitchen of one of the nation's most trusted names in food. Now a new generation of cooks can enjoy and share these delectable dishes with family and friends.

prime revival research institute: Openness and Coordination Hyeong-ki Kwon, 2024-06-19 This book documents various patterns of re-constructing national economies in corporate globalization. As international competition toughens, major national corporations have been forced to reorganize themselves beyond their national boundaries in order to survive. The problem is that a serious tension arises between these national corporations' self-interests and the overall interests of their national economies. Contrary to neoliberal optimism and nationalist pessimism, globalization does not lead to natural upgrade or denationalization. This book examines how three nations, including the free-market liberal U.S., the statist model of Japan, and the social coordination model of Germany, have reconstituted their national economies.
