

primitive technology a book of earth skills

primitive technology a book of earth skills offers an in-depth exploration of traditional methods used by ancient cultures to create tools, shelters, and other necessities from natural resources. This comprehensive guide provides valuable insights into sustainable living, emphasizing the importance of understanding and mastering earth skills that have been practiced for thousands of years. The book delves into techniques such as stone tool making, fire crafting, and building with natural materials, presenting them in a clear and accessible manner. By learning these primitive technologies, readers gain a greater appreciation for human ingenuity and the connection between people and the environment. This article will discuss the key themes and practical aspects covered in the book, highlighting why it is an essential resource for anyone interested in survival skills, anthropology, or eco-friendly craftsmanship. The following sections will outline the main topics addressed, focusing on the core earth skills and their applications.

- Introduction to Primitive Technology and Earth Skills
- Stone Tool Making Techniques
- Fire Crafting and Its Importance
- Building with Natural Materials
- Practical Applications of Earth Skills
- Benefits of Learning Primitive Technology

Introduction to Primitive Technology and Earth Skills

The foundation of **primitive technology a book of earth skills** lies in understanding the basic methods used by early humans to survive and thrive. Primitive technology refers to the creation of tools, structures, and other essentials using materials readily available in the natural environment, such as stone, wood, clay, and plant fibers. Earth skills encompass a broader range of knowledge, including how to locate resources, process raw materials, and utilize natural elements effectively. This introduction provides readers with an overview of the historical context and cultural significance of these traditional techniques, setting the stage for more detailed discussions in subsequent sections.

Historical Context of Primitive Technology

Primitive technology has been practiced for millennia, dating back to prehistoric times when humans first began to manipulate their surroundings. These skills evolved through trial and error, passed down through generations, and form the basis of modern craftsmanship and engineering. The

book highlights how understanding these ancient techniques can inform contemporary sustainable practices and foster a deeper connection with nature.

Core Earth Skills Explained

Earth skills include a variety of practical abilities such as identifying suitable raw materials, crafting tools, building shelters, and producing fire. Mastery of these skills requires patience, observation, and hands-on experience. The book emphasizes the importance of these competencies for survival, self-reliance, and environmental stewardship.

Stone Tool Making Techniques

One of the central topics in **primitive technology a book of earth skills** is the art of stone tool making. This ancient craft involves shaping stones into functional implements used for cutting, scraping, and hunting. The book provides detailed instructions on selecting the right types of stone, understanding fracture mechanics, and applying flintknapping techniques to produce effective tools.

Selecting Suitable Stones

Not all stones are appropriate for tool making. The book guides readers through identifying materials such as flint, chert, obsidian, and quartzite, known for their ability to fracture predictably. These stones are preferred because they produce sharp edges essential for cutting and carving.

Flintknapping Process

Flintknapping is the method of striking stones to remove flakes and shape tools. The book explains techniques like hard hammer percussion, soft hammer percussion, and pressure flaking, each used at different stages of tool creation. Mastering these methods enables the crafting of knives, scrapers, arrowheads, and other implements.

Types of Stone Tools

- Hand axes
- Scrapers
- Projectile points
- Awls and drills

Each type serves a specific function in daily survival activities, and the book explores their design and use in detail.

Fire Crafting and Its Importance

Fire is a vital element in primitive technology, providing warmth, protection, and the means to cook food and harden tools. **Primitive technology a book of earth skills** dedicates significant attention to traditional fire-making techniques that do not rely on modern tools or matches.

Methods of Fire Starting

The book covers several fire-starting methods, including friction-based techniques such as the hand drill, bow drill, and fire plow. Each method requires skill and practice to generate enough heat to ignite tinder.

Choosing and Preparing Tinder

Successful fire crafting depends on selecting the right tinder materials, such as dry grass, bark fibers, and certain fungi. The book explains how to prepare and store tinder to ensure it ignites easily and sustains the initial flame.

Maintaining and Using Fire Safely

Beyond starting a fire, the book emphasizes safe fire management practices, including building proper fire pits, controlling burn areas, and extinguishing fires responsibly to prevent wildfires and environmental damage.

Building with Natural Materials

Constructing shelters and tools from natural materials is a key focus of **primitive technology a book of earth skills**. The book details methods for utilizing earth, wood, clay, and plant fibers to create durable and functional structures.

Types of Primitive Shelters

The book explores various shelter designs such as lean-tos, wickiups, and earth huts. Each shelter type is suited to different environments and resource availabilities, with instructions on selecting sites and gathering materials.

Techniques for Working with Clay and Earth

Clay and earth are versatile building materials used to create walls, ovens, and storage containers. The book describes methods like cob building, adobe brick making, and rammed earth construction, highlighting their durability and insulating properties.

Using Wood and Plant Fibers

Woodworking involves shaping branches and logs into frameworks, tools, and utensils. Plant fibers are employed for binding, weaving, and creating cordage essential for assembling structures and tools. The book includes guidance on harvesting, processing, and utilizing these materials effectively.

Practical Applications of Earth Skills

Beyond theoretical knowledge, **primitive technology a book of earth skills** emphasizes practical uses of these techniques in modern contexts. Earth skills can be applied to wilderness survival, sustainable living, and cultural preservation.

Wilderness Survival

In survival situations, the ability to craft tools, build shelters, and create fire from natural resources is invaluable. The book provides scenarios and tips for applying these skills under various environmental conditions.

Sustainable and Eco-Friendly Living

Primitive technology promotes minimal environmental impact by using renewable resources and traditional methods. This aligns with modern sustainability goals, encouraging a lifestyle that respects natural cycles and reduces waste.

Cultural and Educational Value

Learning earth skills fosters a deeper understanding of human history and cultural heritage. The book is a resource for educators, historians, and enthusiasts interested in preserving indigenous knowledge and traditional craftsmanship.

Benefits of Learning Primitive Technology

Engaging with the content of **primitive technology a book of earth skills** offers numerous benefits beyond survival. These include developing problem-solving abilities, enhancing manual dexterity, and cultivating patience and mindfulness.

Connection with Nature

Practicing earth skills nurtures an intimate relationship with the environment, fostering respect and awareness of natural ecosystems. This connection is essential for promoting conservation and responsible resource use.

Self-Reliance and Confidence

Mastering primitive technology equips individuals with the confidence to handle challenging situations independently. The book encourages empowerment through knowledge and practical competence.

Preservation of Traditional Knowledge

Documenting and practicing ancient skills helps safeguard cultural heritage and ensures that valuable human ingenuity is not lost in the face of modern technological advancements.

Frequently Asked Questions

What is 'Primitive Technology: A Book of Earth Skills' about?

'Primitive Technology: A Book of Earth Skills' is a comprehensive guide that teaches readers how to create tools, shelters, and other necessities using only natural materials and traditional methods.

Who is the author of 'Primitive Technology: A Book of Earth Skills'?

The book is authored by John Plant, who is known for his popular YouTube channel 'Primitive Technology' where he demonstrates building techniques from scratch.

What types of skills can I learn from this book?

You can learn various earth-based skills including making tools from stone, building shelters, creating pottery, making fire without modern equipment, and other survival techniques using natural resources.

Is 'Primitive Technology: A Book of Earth Skills' suitable for beginners?

Yes, the book is designed to be accessible for beginners, with clear instructions and illustrations to guide readers through each process step-by-step.

Does the book include illustrations or photographs?

Yes, the book contains detailed illustrations and photographs to help readers visualize techniques and understand the construction processes.

Can the skills in the book be used for modern survival situations?

Absolutely, the skills taught in the book are practical for wilderness

survival and can help readers become more self-sufficient using natural materials.

What materials are primarily used in the projects featured in the book?

The book focuses on using materials commonly found in nature such as clay, stone, wood, leaves, and plant fibers.

How does 'Primitive Technology: A Book of Earth Skills' differ from other survival guides?

Unlike typical survival guides that often rely on modern tools, this book emphasizes creating everything from scratch using primitive techniques without any modern equipment.

Is this book suitable for outdoor enthusiasts and hobbyists?

Yes, outdoor enthusiasts, bushcrafters, and hobbyists interested in traditional skills will find this book highly informative and inspiring.

Where can I purchase 'Primitive Technology: A Book of Earth Skills'?

The book is available for purchase online through major retailers like Amazon, as well as in bookstores worldwide.

Additional Resources

1. Primitive Technology: A Book of Earth Skills

This comprehensive guide explores ancient techniques for building, crafting, and surviving using only natural materials found in the wild. It covers methods such as making tools, constructing shelters, and creating fire without modern conveniences. The book encourages self-reliance and deepens the reader's connection to the natural world.

2. Bushcraft 101: A Field Guide to the Art of Wilderness Survival

Written by a seasoned survival instructor, this book details essential bushcraft skills for thriving in the wilderness. It includes instructions on foraging, fire-making, shelter building, and navigation. The practical advice is accessible to beginners and emphasizes safety and sustainability.

3. Survival Skills of Native California

This book delves into the traditional survival techniques used by Native American tribes of California. Readers learn how indigenous peoples utilized local plants, animals, and materials to create tools, clothing, and shelters. It offers valuable insights into sustainable living and respect for nature's resources.

4. The Lost Art of Reading Nature's Signs

Focusing on how to interpret natural clues in the environment, this book teaches readers to understand weather patterns, animal behavior, and plant indicators. These skills are vital for outdoor survival and primitive living.

It enhances awareness and helps anticipate changes in the wilderness.

5. *Tom Brown's Field Guide to Wilderness Survival*

Tom Brown Jr., a renowned tracker and naturalist, shares his knowledge of tracking, shelter construction, and primitive hunting techniques. The book combines storytelling with practical lessons, making it engaging and educational. It is a staple for anyone interested in wilderness survival.

6. *Edible Wild Plants: Wild Foods from Dirt to Plate*

This guide identifies common wild edible plants and explains how to safely harvest and prepare them. It includes detailed descriptions and illustrations to assist with plant identification. The book is an indispensable resource for primitive living and foraging enthusiasts.

7. *Stone Age Tools: The Art and Craft of the First Human Technologies*

Exploring the origins of human technology, this book examines how early humans fashioned tools from stone, wood, and bone. It provides step-by-step instructions for replicating ancient tool-making techniques. Readers gain a deeper appreciation for prehistoric ingenuity and survival strategies.

8. *Wildwood Wisdom: Primitive Skills for Modern Life*

This book bridges traditional primitive skills with contemporary outdoor living. It teaches readers how to build natural shelters, make cordage, and craft utensils using only materials found in the wild. The practical knowledge promotes a simpler, more connected way of life.

9. *Fire From Stone: How to Make and Use Stone Age Tools*

Dedicated to the essential skill of fire-making and tool crafting, this book details the processes used by early humans to create sparks and shape stone implements. It offers hands-on projects and historical context. The book is perfect for those interested in mastering foundational primitive skills.

primitive technology a book of earth skills: Primitive Technology David Wescott, 1999 Living in modern society, we have become increasingly disassociated from the earth, from the essence of ourselves, and the need is awakened in us to return to the wilderness--physically and emotionally. We long to feel a sense of connection with our ancient roots. This urge is what has prompted man's fascination with primitive skills: producing objects from natural materials using methods similar to prehistoric cultures. Primitive Technology: A Book of Earth Skills is a sharing of ideas--the philosophies, the history, and the personal stories by the authorities on primitive technology from the pages of The Bulletin of Primitive Technology. Included are instructions for creating fire and tools of wood, stone, and bone, as well as fiber adhesives, projectiles, art, and music. Practicing these primitive methods will lead the seeker towards a tangible, raw connection with the ancient past, with nature's resources and, ultimately, with the creative forces that constructed the foundation of man's survival on the planet.

primitive technology a book of earth skills: Primitive Technology David Wescott, 1999 Living in modern society, we have become increasingly disassociated from the earth, from the essence of ourselves, and the need is awakened in us to return to the wilderness--physically and emotionally. We long to feel a sense of connection with our ancient roots. This urge is what has prompted man's fascination with primitive skills: producing objects from natural materials using methods similar to prehistoric cultures. *Primitive Technology: A Book of Earth Skills* is a sharing of ideas--the philosophies, the history, and the personal stories by the authorities on primitive technology from the pages of *The Bulletin of Primitive Technology*. Included are instructions for creating fire and tools of wood, stone, and bone, as well as fiber adhesives, projectiles, art, and music. Practicing these primitive methods will lead the seeker towards a tangible, raw connection with the ancient past, with nature's resources and, ultimately, with the creative forces that constructed the foundation of man's survival on the planet.

primitive technology a book of earth skills: *Primitive Technology II* David Wescott, 2001-08-20 The Stone Age is the common denominator of mankind, and through experimental archeology—the relearning and replication of ancient skills—we take a step of discovery and understanding into this rich past. In this collection, drawn from the pages of the *Bulletin of Primitive Technology*, learn to create tools to fabricate more complex technologies; master the arts of the bow and arrow; build a shelter or fashion clothing from fibers or buckskin. *Primitive Technology II: Ancestral Skills* provides the guide to rediscovery of the skills and crafts that bind us all into this great human family.

primitive technology a book of earth skills: William Jack Hranicky, Wm Jack Hranicky, 2010-06 *Material Culture from Prehistoric Virginia: Volume 2* is one volume of a two-volume set. This two-volume set is available in black and white and in color. Volume 1 contains artifact listings from A through L. Volume 2 contains the remainder of the alphabetical listings. These publications contain over 10,000 prehistoric artifacts mainly from Virginia, but the publication covers the eastern U. S. The set starts with Pre-Clovis and goes through Woodland times with some Indian ethnography and rock art. Each volume is indexed, contains references, has charts and graphs, drawings, photographs, artifact dates, and artifact descriptions. These volumes contain artifacts that have never appeared in the archaeological literature. From beginners to experienced archaeologists, they offer a complete library for the American Indian culture and experience. If the prehistoric Indian made it, an example is probably shown.

primitive technology a book of earth skills: *The Tao of Survival* James Morgan Ayres, 2013-07-09 “Offers clear, concise, effective, time-tested, even hallowed, means of going into any survival situation with your ‘A’ game.”—Jim Morris, Special Forces major (retired) and award-winning author of *War Story* Written by a student and teacher of Asian thought, martial arts, healing, and meditation, *The Tao of Survival* focuses on real-world, core survival skills that can save your life anytime and anyplace, in any emergency situation. It delves into fundamental concepts that most survival books don’t cover, including how to deal with fear, developing mind/body skills, and fully engaging your senses to be aware of your surroundings. “It is not every day that one comes across a gem. And that is exactly what this book is. For anyone who is into survival—that is, into life and living—then this book is truly a precious commodity to be read by everyone.”—Mykel Hawke, author of *Hawke’s Green Beret Survival Manual* and Special Forces combat commander “What a great book, not only well written and informative, but actually useful. There are many fine books written on the topic of survival . . . but this is the first I’ve seen which comprehensively focuses on teaching the essential fundamentals of true survival.”—Dr. Carl Totton, Psy.D., director of The Taoist Institute and martial arts grandmaster “[Ayres has] always had a seeker’s perspective and has applied it well in his search to know what one needs to learn to be a survivor . . . *The Tao of Survival* is a masterful synthesis of what it takes to survive . . . while living in a modern world.”—David Wescott, director of *Backtracks* and managing editor of the *Bulletin of Primitive Technology*

primitive technology a book of earth skills: The Emergence of Pressure Blade Making Pierre M. Desrosiers, 2012-03-13 Human development is a long and steady process that began with stone

tool making. Because of this skill, humans were able to adapt to climate changes, discover new territories, and invent new technologies. Pressure knapping is the common term for one method of creating stone tools, where a larger device or blade specifically made for this purpose is used to press out the stone tool. Pressure knapping was invented in different locations and at different points in time, representing the adoption of the Neolithic way of life in the Old world. Recent research on pressure knapping has led for the first time to a global thesis on this technique. The contributors to this seminal work combine research findings on pressure knapping from different cultures around the globe to develop a cohesive theory. This contribution to this volume represents a significant development to research on pressure knapping, as well as the field of lithic studies in general. This work will be an important reference for anyone studying the Paleolithic, Mesolithic, and Neolithic periods, lithic studies, technologies, and more generally, cultural transmission.

primitive technology a book of earth skills: Understanding Chipped Stone Tools Brian Hayden, 2022-06-15 This is a unique and engaging book on prehistoric stone tools. It advocates an experiential approach in which analysts try to understand stone tool designs from the users' perspectives, and employs a universal logic of designing tools to solve practical problems and evaluating various possible solutions. However, to do so it is also necessary to understand how stone can be mechanically modified to serve specific functions. The author enlists a rich array of ethnographic observations and considerable background as a flintknapper to show the basic ways in which stones can be flaked and modified and what these characteristics can reveal about prehistoric problem-solving strategies and design constraints. This is an invaluable primer for anyone contemplating the study of prehistoric stone tools.

primitive technology a book of earth skills: From Hand to Handle Lawrence Barham, 2013-09-19 This volume brings together evidence for the cognitive, social, and technological foundations necessary for the development of hafting, or the addition of handles and shafts to previously hand-held tools, which made the tools not only more efficient, but improved their makers' chances of survival.

primitive technology a book of earth skills: Embodied Experiences of Making in Early Modern Europe Sarah A. Bendall, Serena Dyer, 2025-10-01 Processes of making in early modern Europe were both tacit and embodied. Whether making pottery, food, or textiles, the processes of manual production rested on an intersensory connection between mind, body, and object. This volume focuses on the body of the maker to ask how processes of making, experimenting, experiencing, and reconstructing illuminate early modern assumptions and understandings around manual labour and material life. Answers can be gleaned through both recapturing past skills and knowledge of making and by reconstructing past bodies and bodily experiences using recreative and experimental approaches. In drawing attention to the body, this collection underlines the importance of embodied knowledge and sensory experiences associated with the making practices of historically marginalised groups, such as craftspeople, women, domestic servants, and those who were colonised, to confront biases in the written archive. The history of making is found not only in technological and economic innovations which drove 'progress' but also in the hands, minds, and creations of makers themselves. First interdisciplinary collection of essays to: • Synthesise experimental history approaches used to investigate a wide range of objects – dress, cosmetics, cooking and art – and their makers or wearers in the early modern period. • Demonstrate how attention to objects and making, in both historical and modern experimental contexts, can uncover knowledge of embodied and gendered experiences that are otherwise difficult to access. • Contributes to the recently termed 'making' and 'embodied' turns in history.

primitive technology a book of earth skills: The Age of Wood Roland Ennos, 2021-12-07 A scholarly and scientific examination of the unrecognized role of trees in the planet's ecosystem reveals wood's unexpected influence on human evolution, civilization, and the global economy.

primitive technology a book of earth skills: Knowledge Of The Ancestors: Survival Skills ,
primitive technology a book of earth skills: A Place at the Altar Meghan J. DiLuzio, 2020-04-28 A Place at the Altar illuminates a previously underappreciated dimension of religion in

ancient Rome: the role of priestesses in civic cult. Demonstrating that priestesses had a central place in public rituals and institutions, Meghan DiLuzio emphasizes the complex, gender-inclusive nature of Roman priesthood. In ancient Rome, priestly service was a cooperative endeavor, requiring men and women, husbands and wives, and elite Romans and slaves to work together to manage the community's relationship with its gods. Like their male colleagues, priestesses offered sacrifices on behalf of the Roman people, and prayed for the community's well-being. As they carried out their ritual obligations, they were assisted by female cult personnel, many of them slave women. DiLuzio explores the central role of the Vestal Virgins and shows that they occupied just one type of priestly office open to women. Some priestesses, including the flaminica Dialis, the regina sacrorum, and the wives of the curial priests, served as part of priestly couples. Others, such as the priestesses of Ceres and Fortuna Muliebris, were largely autonomous. *A Place at the Altar* offers a fresh understanding of how the women of ancient Rome played a leading role in public cult.

primitive technology a book of earth skills: *El Kharafish* Heiko Riemer, 2011-01-01

primitive technology a book of earth skills: *Knowing our lands and resources* Karki, Madhav, Hill, Rosemary, Dayuan Xue, Alangu, Wilfredo, Ichikawa, Kaoru, Bridgewater, Peter, 2017-12-31

primitive technology a book of earth skills: *Labour of the Stitch* Serena Dyer, 2024-04-18
The making of fashionable women's dress in Georgian England necessitated an inordinate amount of manual labour. From the mantuamakers and seamstresses who wrought lengths of silk and linen into garments, to the artists and engravers who disseminated and immortalised the resulting outfits in print and on paper, Georgian garments were the products of many busy hands. This Element centres the sartorial hand as a point of connection across the trades which generated fashionable dress in the eighteenth century. Crucially, it engages with recreation methodologies to explore how the agency and skill of the stitching hand can inform understandings of craft, industry, gender, and labour in the eighteenth century. The labour of stitching, along with printmaking, drawing, and painting, composed a comprehensive culture of making and manual labour which, together, constructed eighteenth-century cultures of fashionable dress.

primitive technology a book of earth skills: *Journal of Greek Archaeology Volume 3* 2018 , 2018-10-31 True to its initial aims, the latest volume of the Journal of Greek Archaeology runs the whole chronological range of Greek Archaeology, while including every kind of material culture.

primitive technology a book of earth skills: *Bulletin of Primitive Technology* , 2005

primitive technology a book of earth skills: *Major Uriah Barber* Dr. Cora Tula Watters, 2011-05-27 The narrative of Uriah Barber is full of one cliff hanger after another as Barber, veteran of the Revolutionary War, and his younger step-brother Isaac Bonser lead five families across the new nation from Northumberland County in Pennsylvania to the Ohio River Valley. Dashing Uriah, his wife Barbara, blond, intelligent and pregnant, head south with their six children and nanny, lovely Rachael Baird. Heading down the Susquehanna River with Isaac, wife Abigail their four children, the Wards, Beattys and McAdams, who were newlyweds. Two keelboats were constructed to float them down the long and twisting Susquehanna to Paxtang, present day Harrisburg, where they exchanged their boats for Conestoga wagons and horses. Needing another man to pole the second boat, dark handsome Shawnee scout Jacob Early was hired in Sunbury. When they reached Paxtang he returned home taking with him the heart of Rachael Baird. Crossing the breadth of Pennsylvania on what is now Pennsylvania Turnpike, they encounter everything from broken axles, tornadoes, critically ill children, another pregnancy and a wagon tumbling over the mountainside taking everything. They finish their journey aboard an amazing three-story high majestic keelboat named the Floating Palace. Just when they need him most Early shows up to help them finish their journey on the Monongahela, then the Ohio where they encounter sandbars, underwater trees and river pirates. The rest of the story tells how Major Barber settled in southern Ohio and carved his name forever in the history of Scioto County. The tale is full of passion, love, hope, humor and tragedy enough for a Shakespearean play.

primitive technology a book of earth skills: *Mesolithic Settlement in the North Sea*

Basin Clive Waddington, 2007-12-20 The archaeological remains at Howick consist of a Mesolithic hut site and an Early Bronze Age cist cemetery located on a modern cliff edge overlooking a small estuary. This volume is devoted solely to the reporting and interpretation of the Mesolithic remains. Three huts had been constructed on the Howick site, all on the same footprint, with no evidence to indicate a gap between these occupations, and the remains inside the hut were all consistent with its use as a habitation site. The lithic material from Howick is the most accurately dated assemblage from any British Mesolithic site and is a classic example of a narrow-blade industry. Typically for Britain these sites date from around 7500 cal BC but the Howick dates indicate an earlier start for this type of industry. The chipped stone assemblage from Howick is all made from locally occurring beach pebble flint which fits into the wider pattern of localised raw material acquisition by groups elsewhere in North-East England. A wide variety of tool types were found within the hut reflecting the diverse activities that appear to have taken place there. With such a wide range of resources on offer on a year-round basis, the site is interpreted as a base camp settlement that was used by the same group and their descendants over a period of several generations lasting for somewhere in the region of 200 years. The size of the hut indicates its use by a family-sized group. The Howick excavations have forced a rethink of the scale and nature of Mesolithic settlement in North-East England, as well as the relationship between this and other regions around the North Sea Basin. It is hoped that this work will help encourage further research into the Mesolithic of the region and its interactions with adjacent areas of upland, other North Sea Basin communities, as well as groups occupying the lands further north and south.

primitive technology a book of earth skills: *The missing woodland resources* Marian Berihuete-Azorín, María Martín Seijo, Oriol López-Bultó, Raquel Piqué, 2022-07-20 Woodlands are a key source of raw materials for many purposes since early Prehistory. Wood, bark, resin, leaves, fibres, fungi, moss, or tubers have been gathered to fulfill almost every human need. That led societies to develop specific technologies to acquire, manage, transform, elaborate, use, and consume these resources. The materials provided by woodlands covered a wide range of necessities such as food, shelter, clothing, or tool production, but they also provided resources employed for waterproofing, dying, medicine, and adhesives, among many others. All these technological processes and uses are commonly difficult to identify through the archaeological record. Some materials are exclusively preserved by charring or in anaerobic conditions at very exceptional sites or leave only a very slight trace behind them (e.g., containers). Consequently, they have received far less attention in archaeobotanical studies compared to other kind of plant materials consumed as food or firewood. This book provides an overview of technological uses of plants from the Palaeolithic to the Post-Medieval period. This collection of papers presents different archaeobotanical and archaeological studies dealing with the use of a wide range of woodland resources, most of them among the less visible for archaeology, such as bast, fibres and fungi. These papers present different approaches for their study combining archaeology, archaeobotany and ethnoarchaeology.
