printable art therapy activities: Art Therapy Activities for All Ages Joan Stewart, 2024-03-28 The purpose of Art Therapy is to create an oasis of time to allow the brain and body to relax, recharge, and rejuvenate itself, while exploring the creative process of manipulating design elements such as line, shape, form, space, texture, tone, and color. Art Therapy can help people express themselves more freely, improve their mental health, and improve interpersonal relationships. The basis of Art Therapy is established on the idea that people can recover and feel better via artistic expression. There is increasing evidence in rehabilitation medicine and the field of neuroscience that art enhances brain function by impacting brain wave patterns, emotions and the nervous system. Art can also raise serotonin levels. These benefits don't just come from making art, they also occur by experiencing art. As an Art Facilitator, I have thoroughly tested all the activities in this book over many years and with a variety of people. Many activities are structured to encourage team work, problem solving and communication as well as individual creativity in a relaxed, social environment. I was always surprised and impressed at the results. While each activity focuses on one of the main categories (brain, senses, memory, teamwork and loss) all of them involve a number of skills. The results can be different with each new group and even when presented to the same group again.

printable art therapy activities: Art, Angst, and Trauma Doris Banowsky Arrington, 2007 This important new text demonstrates how art therapy can make a major contribution to the treatment of children who are seriously ill, in foster care, physically and emotionally traumatized, as well as deviant and addicted adolescents, young adults, and with the aftermath of a spouse's suicide. The first three chapters of this book set the framework providing established developmental structure, holistic interactions of mind/body and attachment essentials for human beings. In the following chapters authors that are experts in facilitating art as healing with people of different ages and in different settings share their insights, images, and stories about treating developmental issues of angst and trauma. Of special interest are the two chapters on brain development and function, indicating that art therapy can make a major contribution to the healing of trauma because creative activity literally changes the traumatized typography of the brain. Information about the importance of bilateral integration as seen in both Eye Movement Desensitization Reprocessing (EMDR) and art therapy contributing to healing trauma is discussed. There is a special segment on art therapy and a new approach to the treatment of trauma with a sequence of chapters devoted to the ways art therapy facilitates healing of issues throughout the life span. The Instinctual Trauma Response (ITR) is examined, which resolves the client's trauma without abreaction or re-experiencing the event and without the use of medication. In addition, there is clinical documentation of the successful resolution of different kinds of trauma with a variety of clients at various stages of development. These cases include the trauma of multiple surgeries, family violence, and witness to death. The book concludes with a discussion of how art therapy has helped the elderly and their caretakers deal with issues of Alzheimer's and death. This is a book that

contains significant “new” material that is a major contribution to the art therapy field.
