survey of accounting read online: The Radical Case for Teaching Skim Reading in First-Year Writing Ellen C. Carillo, 2025-10-15 The Radical Case for Teaching Skim Reading in First-Year Writing encourages faculty, particularly in writing studies, to check internal biases toward deep reading and teach skim reading in first-year writing courses. Written by Ellen C. Carillo, who has previously published on the importance of teaching deep reading, this small book is a controversial prompt for further discussion and exploration. Data from studies of the lived experiences of undergraduates indicate that students do not need deep reading practices in the majority of their classes across the disciplines and, moreover, that students succeed in their classes by skim reading. Rather than imagining an idealized set of circumstances that allow for sustained deep reading, as does a great deal of the scholarship on reading in writing studies, The Radical Case for Teaching Skim Reading in First-Year Writing argues for teaching students reading practices that will support their success in their college writing assignments rather than those strategies the field believes should support their success. In our information landscape and our fragile democracy, encouraging skimming as opposed to deep reading may seem like a gamble—this very tendency toward the quick rather than the critical has undoubtedly contributed to the current crisis of mass misinformation. However, teaching students to use skim reading as a strategic tool for purposeful engagement and efficient yet thoughtful information filtering better equips them to navigate the rapidly changing information landscape and manage the fast-paced flow of content from diverse media sources.

survey of accounting read online: Political Communication in China Wenfang Tang, Shanto Iyengar, 2013-09-13 It is widely recognised that the Chinese Communist Party (CCP) uses the media to set the agenda for political discourse, propagate official policies, monitor public opinion, and rally regime support. State agencies in China control the full spectrum of media programming, either through ownership or the power to regulate. Political Communication in China examines the two factors which have contributed to the rapid development of media infrastructure in China: technology and commercialization. Economic development led to technological advancement, which in turn brought about the rapid modernization of all forms of communication, from 'old' media such as television to the Internet, cell phones, and satellite communications. This volume examines how these recent developments have affected the relationship between the CCP and the mass media as well as the implications of this evolving relationship for understanding Chinese citizens' media use, political attitudes, and behaviour. The chapters in this book represent a diverse range of research methods, from surveys, content analysis, and field interviews to the

manipulation of aggregate statistical data. The result is a lively debate which creates many opportunities for future research into the fundamental question of convergence between political and media regimes. This book was originally published as a special issue of the journal Political Communication.
