swenson arts and technology: Mainframe Experimentalism Hannah Higgins, Douglas Kahn, 2023-09-01 Mainframe Experimentalism challenges the conventional wisdom that the digital arts arose out of Silicon Valley's technological revolutions in the 1970s. In fact, in the 1960s, a diverse array of artists, musicians, poets, writers, and filmmakers around the world were engaging with mainframe and mini-computers to create innovative new artworks that contradict the stereotypes of computer art. Juxtaposing the original works alongside scholarly contributions by well-established and emerging scholars from several disciplines, Mainframe Experimentalism demonstrates that the radical and experimental aesthetics and political and cultural engagements of early digital art stand as precursors for the mobility among technological platforms, artistic forms, and social sites that has become commonplace today. swenson arts and technology: Exploring White Fragility Christopher Paslay, 2021-03-05 Exploring White Fragility uses both existing research and anecdotal classroom observations to examine the effects whiteness studies is having on America's schools, and investigates how the antiracist movement to dismantle "white supremacy culture" is impacting student and teacher morale and expectations, school discipline, and overall academic achievement. Specifically, it analyzes the major tenets of whiteness studies, including awareness of white privilege and white fragility; the belief in colorblindness, individualism, and meritocracy; white racial identity development (WRID); implicit bias and microaggressions; and the methodologies underlying these concepts. The book also compares traditional multicultural education to antiracist education; examines the impact of family and culture on learning, discipline, and achievement; investigates how whiteness studies and antiracism influence stereotype threat, the school-to-prison pipeline (STPP), and teacher and student expectations (Pygmalion Effect); studies the impact of race-based discipline approaches on student learning and achievement; and finally, offers solutions and improvements for whiteness scholars, teachers, administrators, and school reformers.

swenson arts and technology: Possibilities, Challenges, and Changes in English Teacher

Education Today Heidi L. Hallman, Kristen Pastore-Capuana, Donna L. Pasternak, 2019-05-24 This book focuses on English teacher educators' experiences concerning professionalization and teacher identity. The term professionalization, itself, can be problematized (Popkewitz, 1994), as it connotes adherence to realities to professional norms that are based within particular histories. Yet, teacher educators must confront how to mentor prospective teachers into the field and how changes to the field manifest changes to what it means to be a professional. In research about changes in English teacher education over the past twenty years, Pasternak, Caughlan, Hallman, Renzi and Rush (2017) presented five distinct foci of ELA programs that have evolved: 1) changes to field experiences within teacher education programs, 2) altered conceptions of teaching literature and literacy within the context of ELA, 3) increased adherence to standardization, 4) changing demographics of students in K-12 classrooms, and 5) increased expectations for use of technology within ELA. These foci impact how professionals in ELA are viewed both from inside and outside the profession and how they navigate these tensions in teacher education programs to define what it means to identify as an English teacher. Throughout the book, chapter authors articulate dilemmas that focus around professionalization and teacher identity, questioning what it means to be an English teacher today. While some chapters suggest methods for increased awareness of tensions within practice, other chapters approach professionalization and teacher identity by asking what the limits of methods classes and teacher education might be in preparing ELA teachers and supporting them to remain in the profession. Today's political environment devalues teachers and teaching, a situation that has critics deriding the educational standards at institutes of higher education while concurrently lauding alternative programs that do not have to adhere to the same rigorous teacher certification requirements. English teacher educators are now being asked to design programs, soften requirements, and recruit and mentor teacher candidates to a profession that, in the past, certified more new English teachers than it could employ. The chapters in this book explore what it means to educate and be an English teacher educator under these conditions.

swenson arts and technology: Music/City Jonathan R. Wynn, 2015-12-08 Austin's famed South by Southwest is far more than a festival celebrating indie music. It's also a big networking party that sparks the imagination of hip, creative types and galvanizes countless pilgrimages to the city. Festivals like SXSW are a lot of fun, but for city halls, media corporations, cultural institutions, and community groups, they're also a vital part of a complex growth strategy. In *Music/City*, Jonathan R. Wynn immerses us in the world of festivals, giving readers a unique perspective on contemporary urban and cultural life. Wynn tracks the history of festivals in Newport, Nashville, and Austin, taking readers on-site to consider different festival agendas and styles of organization. It's all here: from the musician looking to build her career to the mayor who wants to exploit a local cultural scene, from a resident's frustration over corporate branding of his city to the music executive hoping to sell records. *Music/City* offers a sharp perspective on cities and cultural institutions in action and analyzes how governments mobilize massive organizational resources to become promotional machines. Wynn's analysis culminates with an impassioned argument for temporary events, claiming that when done right, temporary occasions like festivals can serve as responsive, flexible, and adaptable products attuned to local places and communities.

In addition, more research is needed to empirically evaluate the effectiveness of online education in teacher preparation. *Teacher Education Programs and Online Learning Tools: Innovations in Teacher Preparation* presents information about current online practices and research in teacher education programs, and explores the opportunities, methods, and issues surrounding technologically innovative opportunities in teacher preparation. swenson arts and technology: Philosophy and the Arts Bert Olivier, 2009 This collection of philosophical essays addresses important issues in the arts, encompassing painting, sculpture, photography, film and architecture. The author's point of departure is the conviction that art in all its manifestations is an extremely significant cultural practice because it embodies a creative, reflective appropriation of social, political, economic, religious, historical and ecological developments, and as such merits close philosophical scrutiny, reflection and interpretation. The question of whether painting is still a viable artistic practice in our technocratic society is considered here, and it is no accident that both this issue and that of artificial intelligence are approached from the perspective of the phenomenological thought of Maurice Merleau-Ponty, among other thinkers. Equally important is the consideration of the relationship between art and the ethical, as highlighted by significant recent artistic events, as well as discussion of the transformational influence of ecological art and the culturally symptomatic meaning of kitsch. Other themes discussed include play and artistic tradition, formulating a suitable model for art 'beyond' Kierkegaard's aesthetic and ethical models, the meaning of 9/11 for architecture, and Lyotard's claim that today only an aesthetic of the sublime, instead of the beautiful, can help us make sense of art.
