sw durham family medicine: Spirituality and Religion Within the Culture of Medicine Michael J. Balboni, John R. Peteet, 2017 Spirituality and Religion Within the Culture of Medicine provides a comprehensive evaluation of the relationship between spirituality, religion, and medicine evaluating current empirical research and academic scholarship. In Part 1, the book examines the relationship of religion, spirituality, and the practice of medicine by assessing the strengths and weaknesses of the most recent empirical research of religion/spirituality within twelve distinct fields of medicine including pediatrics, psychiatry, internal medicine, surgery, palliative care, and medical ethics. Written by leading clinician researchers in their fields, contributors provide case examples and highlight best practices when engaging religion/spirituality within clinical practice. This is the first collection that assesses how the medical context interacts with patient spirituality recognizing crucial differences between contexts from obstetrics and family medicine, to nursing, to gerontology and the ICU. Recognizing the interdisciplinary aspects of spirituality, religion, and health, Part 2 of the book turns to academic scholarship outside the field of medicine to consider cultural dimensions that form clinical practice. Social-scientific, practical, and humanity fields include psychology, sociology, anthropology, law, history, philosophy, and theology. This is the first time in a single volume that readers can reflect on these multi-dimensional, complex issues with contributions from leading scholars. In Part III, the book concludes with a synthesis, identifying the best studies in the field of religion and health, ongoing weaknesses in research, and highlighting what can be confidently believed based on prior studies. The synthesis also considers relations between the empirical literature on religion and health and the theological and religious traditions, discussing places of convergence and tension, as well as remaining open questions for further reflection and research. This book will provide trainees and clinicians with an introduction to the field of spirituality, religion, and medicine, and its multi-disciplinary approach will give researchers and scholars in the field a critical and up-to-date analysis.

sw durham family medicine: Health Policy and Advanced Practice Nursing Kelly A. Goudreau, Mary C. Smolenski, 2013-12-11 There are many policy books, but none are written by APRNs or focus just on APRN practice. This topic is critical in today's healthcare reform movement. APRNs are at the core, or can be, if they use their practice knowledge and education to shape policy...[The] editors eloquently make the case that policy formation is a critical nursing skill.--Doody's Medical Reviews ìGaining a better understanding of the political landscape and its impact on nursing and the APRN practice environment, by learning through textbooks such as this, and then through active involvement at any level in the political process itself, can only strengthen nursing and its influence on health policy .î -Loretta C. Ford, RN, EdD, PNP, FAAN, FAANP From the Foreword This view of health policy from the perspective of APRN practice is a call to action for advanced practice nurses to learn about the impact and implications of current initiatives in health policy. This knowledge will assist them in determining how they define and create positive change for their patients and have an impact on community, national, and world health. This is the only text that satisfies the need for policy discussions for all APNs , it is designed to meet the requirements of both the IOM report on The Future of Nursing and the DNP criteria V for inclusion of health policy and advocacy in the curriculum. The text encompasses evolving health care policy and reform in the U.S., Canada, and internationally, addressing its impact on advanced practice nursing, APRN roles, care for special populations, health care quality, and patient safety . The book brings together a wealth of information written by luminaries in the field. Dr. Goudreau is a Past President, and Board Member of the National Association of Clinical Nurse Specialists (NACNS), and Dr. Smolenski was Director of Certification Services at the ANCC for 11 years, directing certification for 150,000 nurses in over 30 specialties. The text discusses issues surrounding the regulation of APRNs, how the local regulatory environment shapes their practice and how they can shape their local regulatory

environment. Additionally, the text brings in international perspectives on how APRNs can and are impacting patient care globally. In order to provide content relevant to a universal APRN readership, each section of the text endeavors to present information from all four APRN perspectives: NPs, CNSs, CRNAs, and CNMs. For all of these roles, the book covers the implications of current and future health policy changes for APRN practice. Key Features: Addresses the role-specific policy informational needs of all APRN roles including NPs, CNSs, CRNAs, and CNMs Brings together in one volume all of the requisite information about health care policy and reform and its impact on advanced practice nursing Meets the requirements of the IOM report on The Future of Nursing and the DNP criteria V for inclusion of health policy and advocacy in the curriculum Offers guidance on how APRNs can influence policy development Covers impact and implications of health care policy and reform in the U.S., Canada, and internationally
