This team works collaboratively to ensure accurate diagnosis and effective treatment for a broad spectrum of sleep conditions. The center emphasizes patient-centered care, combining clinical expertise with the latest evidence-based practices. Swedish Medical Center's commitment to excellence in sleep medicine is reflected in its comprehensive approach, from initial consultation through long-term follow-up.

Multidisciplinary Care Team

The sleep medicine program at Swedish Medical Center is staffed by specialists trained in various fields

related to sleep health. This includes board-certified sleep physicians, certified sleep technologists, and behavioral health experts. Such a multidisciplinary approach facilitates comprehensive assessments that consider physical, neurological, and psychological factors contributing to sleep disorders. Collaboration among specialists ensures that patients receive personalized care plans tailored to their unique needs.

Facilities and Technology

Equipped with modern sleep laboratories and diagnostic equipment, Swedish Medical Center sleep medicine utilizes advanced polysomnography (PSG), home sleep apnea testing, and multiple sleep latency tests (MSLT) to gather detailed data on sleep patterns. These facilities provide a comfortable and controlled environment for overnight and daytime sleep studies, allowing for accurate monitoring and analysis of sleep stages, breathing irregularities, and other physiological parameters.

Common Sleep Disorders Treated

Swedish Medical Center sleep medicine addresses a wide array of sleep disorders that affect millions of individuals. These conditions range from mild disturbances to severe disorders that significantly impair daily functioning and quality of life. Understanding the common disorders treated at the center helps patients recognize symptoms and seek timely evaluation.

Obstructive Sleep Apnea (OSA)

One of the most prevalent disorders managed at Swedish Medical Center sleep medicine is obstructive sleep apnea. OSA is characterized by repeated episodes of airway obstruction during sleep, resulting in disrupted breathing and intermittent hypoxia. Symptoms often include loud snoring, excessive daytime sleepiness, and morning headaches. The center provides comprehensive diagnosis and individualized treatment plans to manage this condition effectively.

Insomnia

Insomnia, defined by difficulty falling or staying asleep, is another common condition treated. Swedish Medical Center employs cognitive behavioral therapy for insomnia (CBT-I), medication management, and lifestyle counseling to improve sleep quality and duration. The center's integrative approach ensures that underlying causes such as stress, anxiety, or medical conditions are also addressed.

Restless Legs Syndrome (RLS) and Periodic Limb Movement Disorder

(PLMD)

Patients experiencing uncomfortable sensations in their legs or involuntary limb movements during sleep are evaluated for RLS and PLMD. Swedish Medical Center sleep medicine offers diagnostic testing and pharmacological as well as behavioral therapies to alleviate symptoms and enhance sleep continuity.

Diagnostic Procedures and Sleep Studies

Accurate diagnosis is critical in sleep medicine, and Swedish Medical Center utilizes a variety of diagnostic tools to identify sleep disorders. These procedures provide objective data that guide treatment decisions and monitor therapeutic outcomes.

Polysomnography (PSG)

Polysomnography is the gold standard diagnostic test performed overnight in a controlled sleep lab environment. It records multiple physiological parameters including brain activity, eye movement, muscle tone, heart rate, respiratory effort, airflow, and oxygen saturation. This comprehensive assessment helps diagnose conditions such as sleep apnea, narcolepsy, and periodic limb movement disorder.

Home Sleep Apnea Testing

For selected patients, Swedish Medical Center offers home sleep apnea testing as a convenient alternative to in-lab studies. This portable monitoring captures essential data related to breathing patterns and oxygen levels, facilitating diagnosis of obstructive sleep apnea in appropriate cases.

Multiple Sleep Latency Test (MSLT) and Maintenance of Wakefulness Test (MWT)

These specialized tests evaluate daytime sleepiness and the ability to stay awake, respectively. They are particularly useful in diagnosing narcolepsy and assessing the effectiveness of treatments for excessive daytime sleepiness.

Treatment Options and Therapies

Swedish Medical Center sleep medicine provides a wide range of evidence-based treatment modalities tailored to individual patient needs. The goal is to restore restful sleep, improve daytime functioning, and reduce associated health risks.

Continuous Positive Airway Pressure (CPAP) Therapy

CPAP therapy is the primary treatment for obstructive sleep apnea. Swedish Medical Center offers comprehensive CPAP titration and education programs to ensure optimal device use and adherence. The center also provides alternative positive airway pressure devices for patients who require different treatment approaches.

Cognitive Behavioral Therapy for Insomnia (CBT-I)

CBT-I is a structured, non-pharmacological intervention shown to be highly effective in treating chronic insomnia. Swedish Medical Center's behavioral health specialists deliver individualized CBT-I sessions that focus on sleep hygiene, stimulus control, relaxation techniques, and cognitive restructuring.

Pharmacological Treatments

When appropriate, medication may be prescribed to manage symptoms of sleep disorders such as restless legs syndrome, narcolepsy, or chronic insomnia. The center carefully evaluates the risks and benefits of pharmacotherapy in the context of overall treatment plans.

Lifestyle and Behavioral Modifications

Education on sleep hygiene and lifestyle changes are integral components of treatment. Recommendations may include regular sleep schedules, avoidance of stimulants, stress management, and exercise to promote healthier sleep patterns.

Patient Care and Support Services

Swedish Medical Center sleep medicine emphasizes holistic patient care beyond diagnosis and treatment. Support services help patients navigate their conditions and maintain long-term sleep health.

Patient Education Programs

Comprehensive education about sleep disorders, treatment options, and self-management strategies empowers patients to take an active role in their care. Educational materials and workshops are routinely offered.

Follow-Up and Monitoring

Regular follow-up appointments monitor treatment efficacy and make necessary adjustments. This ongoing care ensures sustained improvement and addresses any emerging issues promptly.

Support Groups and Counseling

Support groups and counseling services are available to assist patients coping with the emotional and psychological impacts of chronic sleep disorders. These resources foster community and improve overall well-being.

Research and Innovations in Sleep Medicine

Swedish Medical Center sleep medicine is actively involved in research to advance understanding and treatment of sleep disorders. Participation in clinical trials and adoption of emerging technologies exemplify the center's commitment to innovation.

swedish medical center sleep medicine: Microbiome and Cancer Erle S. Robertson, 2019-02-20 This book ventures into a new and exciting area of discovery that directly ties our current knowledge of cancer to the discovery of microorganisms associated with different types of cancers. Recent studies demonstrate that microorganisms are directly linked to the establishment of cancers and that they can also contribute to the initiation, as well as persistence of, the cancers. Microbiome and Cancer covers the current knowledge of microbiome and its association with human cancers. It provides important reading for novices, senior undergraduates in cancer and microbiology, graduate students, junior investigators, residents, fellows and established investigators in the fields of cancer and microbiology. We cover areas related to known, broad concepts in microbiology and how they can relate to the ongoing discoveries of the micro-environment and the changes in the metabolic and physiologic states in that micro-environment, which are important for the ongoing nurturing and survival of the poly-microbial content that dictates activities in that micro-environment. We cover the interactions of microorganisms associated with gastric carcinomas, which are important for driving this particular cancer. Additional areas include oral cancers, skin cancers, ovarian cancers, breast cancers, nasopharyngeal cancers, lung cancers, mesotheliomas, Hodgkin's and non-Hodgkin's lymphomas, glioblastoma multiforme, hepatocellular carcinomas, as well as the inflammatory response related to the infectious agents in cancers. This book covers the metabolic changes that occur because of infection and their support for development of cancers, chronic infection and development of therapeutic strategies for detection and control of the infection. The field of microbiome research has exploded over the last five years, and we are now understanding more and more about the context in which microorganisms can contribute to the onset of cancers in humans. The field of microbiome research has demonstrated that the human body has specific biomes for tissues and that changes in these biomes at the specific organ sites can result in disease. These changes can result in dramatic differences in metabolic shifts that, together with genetic mutations, will produce the perfect niche for establishment of the particular infection programmes in that organ site. We are just beginning to understand what those changes are and how they influence the disease state. Overall, we hope to bring together the varying degrees of fluctuations in the microbiome at the major organ sites and how these changes affect the normal cellular processes because of dysregulation, leading to proliferation of the associated tissues.
