However, the professional re-entry of migrant teachers with and without a refugee background has been neglected for a long time. This publication, which was developed in the European project International Teachers for Tomorrow's School (ITTS), is dedicated to this question. In seven country contributions, the opportunities and challenges of returning to work in Belgium, Germany, Greece, Iceland, Poland, Slovenia and Türkiye are examined – for some of the countries, new ground was broken. It is shown which conditions favour, challenge or prevent a new professional start. In addition, the results of the cross-national ITTS study are presented, in which high satisfaction values are reflected among those teachers who succeeded in re-entering the profession despite many hurdles. Finally, the findings of the project are condensed into a series of hints and recommendations.

teacher of tomorrow login: On Becoming an Effective Teacher Carl R Rogers, Harold C Lyon, Reinhard Tausch, 2013-08-22 On Becoming an Effective Teacher describes exemplary practices like Teach For America, which highlight the power of person-centered teaching to bring about higher student achievement and emotional intelligence. Lyon situates the classic with the cutting-edge, integrating wisdom with research, anecdote with practical advice, to find truths that reveal paths toward effective teaching. Jeffrey Cornelius-White, Psy.D., LPC, Professor of Counseling, Missouri State University, USA, Author of Learner Centered Instruction: Building Relationships for Student Success This fascinating book reveals through current research and contemporary applications that Carl Rogers' pioneering and radical approach to education is as relevant today as it was in the 1970s and '80s. Brian Thorne, University of East Anglia, UK Carl Rogers is one of the most influential psychologists of the twentieth century. His influence is similarly outstanding in the fields of education, counselling, psychotherapy, conflict resolution, and peace. On Becoming an Effective Teacher presents the final unpublished writings of Rogers and as such has, not only unique historical value, but also a vital message for today's educational crises, and can be read as a prescription against violence in our schools. It documents the research results of four highly relevant, related but independent studies which comprise the biggest collection of data ever accumulated to test a person-centred theory in the field of education. This body of comprehensive research on effective teaching was accomplished over a twenty-year period in 42 U.S. States and in six other countries including the UK, Germany, Brazil, Canada, Israel, and Mexico and is highly relevant to the concerns of teachers, psychologists, students, and parents. The principal findings of the research in this book show that teachers and schools can significantly improve their effectiveness through programs focusing on facilitative interpersonal relationships. Teachers who either naturally have, or are trained to have empathy, genuineness (congruence), and who prize their students (positive regard) create an important level of trust in the classroom and exert significant positive effects on student outcomes including achievement scores, interpersonal functioning, self-concept, attendance, and violence. The dialogues between Rogers and Lyon offer a

unique and timeless perspective on teaching, counselling and learning. The work of Reinhard Tausch on person-centered teaching for counselors, parents, athletics, and even textbook materials, and the empathic interactions of teachers and students, is among the most thorough and rigorous research ever accomplished on the significance and potential of a person-centered approach to teaching and learning. This pioneering textbook is highly relevant to educational psychologists and researchers, as well as those in undergraduate and graduate university courses in education, teacher training, counseling, psychology and educational psychology.

teacher of tomorrow login: Good Teachers for Tomorrow's Schools, 2021-05-25 Teachers in schools nowadays are challenged to create inclusive learning environments and safe spaces for encountering diversity in values, cultures and religions, as well as in (dis)ability and talent. Classrooms are micro-cosmoses in which local and global issues are confronted and addressed. This volume discusses the characteristics of good teachers and the teaching that is needed in today's and tomorrow's schools. The focus is on research-based perspectives, with contributions from several internationally renowned scholars on what constitutes good and quality in teaching-studying-learning processes. The chapters focus on good teaching and good teachers from perspectives concerning the fundamental and transversal features of what constitutes a good teacher. More specifically, it is argued that good teachers in tomorrow's schools will need capabilities that reflect the purpose of education, values in education, and talent in education. teacher of tomorrow login: Educating Teachers and Tomorrow's Students through Service-Learning Pedagogy Virginia M. Jagla, Kathleen C. Tice, 2019-02-01 Service-learning is a powerful method of teaching and learning that has been used effectively for more than two decades. This volume contributes further to the *Advances in Service-Learning Research* series that focuses upon service-learning in teacher education. Research and theory indicate that knowledge of service-learning pedagogy and how to implement it in teacher candidates' future classrooms can enhance field experiences of teacher education and the civic mission of schools. However, research also reminds us that the practice of service-learning is nuanced and complex. No two service-learning experiences are alike, yet universal characteristics across service-learning experiences define its essence and distinction. It is through research that digs deep into these nuanced issues that we can learn more about the different characteristics of the experience that define service-learning and guide implementation. The preface provides an interview with Andy Furco, an early advocate of service-learning and noted leader who has fostered service-learning in K-12 and higher education throughout the United States and across the globe. Andy Furco's commentary offers an historical overview of the field as well as how the field can advance, providing insights for those new to the field as well as those who have engaged in service-learning. The preface and thirteen chapters together provide empirical and conceptual support for including service-learning. Concurrently, this scholarship provides guidance for implementing service-learning

in teacher preparation and in K-12 education. Interrelated themes include self efficacy, connections with communities, diversity, and program development in teacher education.

teacher of tomorrow login: Educating Teachers of Science, Mathematics, and Technology National Research Council, Center for Education, Committee on Science and Mathematics Teacher Preparation, 2001-01-18 Each new headline about American students' poor performance in math and science leads to new calls for reform in teaching. Education Teachers of Science, Mathematics, and Technology puts the whole picture together by synthesizing what we know about the quality of math and science teaching, drawing conclusions about why teacher preparation needs reform, and then outlining recommendations for accomplishing the most important goals before us. As a framework for addressing the task, the book advocates partnerships among school districts, colleges, and universities, with contributions from scientists, mathematicians, teacher educators, and teachers. It then looks carefully at the status of the education reform movement and explores the motives for raising the bar for how well teachers teach and how well students learn. Also examined are important issues in teacher professionalism: what teachers should be taught about their subjects, the utility of in-service education, the challenge of program funding, and the merits of credentialing. Professional Development Schools are reviewed and vignettes presented that describe exemplary teacher development practices.

teacher of tomorrow login: Preparing the Mothers of Tomorrow Ela Greenberg, 2012-11-30

From the late nineteenth century onward, men and women throughout the Middle East discussed, debated, and negotiated the roles of young girls and women in producing modern nations. In Palestine, girls' education was pivotal to discussions about motherhood. Their education was seen as having the potential to transform the family so that it could meet both modern and nationalist expectations. Ela Greenberg offers the first study to examine the education of Muslim girls in Palestine from the end of the Ottoman administration through the British colonial rule. Relying upon extensive archival sources, official reports, the Palestinian Arabic press, and interviews, she describes the changes that took place in girls' education during this time. Greenberg describes how local Muslims, often portrayed as indifferent to girls' education, actually responded to the inadequacies of existing government education by sending their daughters to missionary schools despite religious tensions, or by creating their own private nationalist institutions. Greenberg shows that members of all socioeconomic classes understood the triad of girls' education, modernity, and the nationalist struggle, as educated girls would become the mothers of tomorrow who would raise nationalist and modern children. While this was the aim of the various schools in Palestine, not all educated Muslim girls followed this path, as some used their education, even if it was elementary at best, to become teachers, nurses, and activists in women's organizations.

How can we measure results? How should teachers be educated and certified? What obstacles are blocking reform?

teacher of tomorrow login: Perspectives on the Teaching of Geometry for the 21st Century C. Mammana, V. Villani, 2012-12-06 In recent years geometry seems to have lost large parts of its former central position in mathematics teaching in most countries. However, new trends have begun to counteract this tendency. There is an increasing awareness that geometry plays a key role in mathematics and learning mathematics. Although geometry has been eclipsed in the mathematics curriculum, research in geometry has blossomed as new ideas have arisen from inside mathematics and other disciplines, including computer science. Due to reassessment of the role of geometry, mathematics educators and mathematicians face new challenges. In the present ICMI study, the whole spectrum of teaching and learning of geometry is analysed. Experts from all over the world took part in this study, which was conducted on the basis of recent international research, case studies, and reports on actual school practice. This book will be of particular interest to mathematics educators and mathematicians who are involved in the teaching of geometry at all educational levels, as well as to researchers in mathematics education.

teacher of tomorrow login: A Teacher of the Church Russ Moulds, 2007-06-01 This book will deepen your regard for the church's task of didache, the act of teaching Christians. The chapters explore what the writers believe are several key biblical texts and themes for teaching, select doctrines of the church that inform teaching as a ministry, and features of teaching in the Lutheran tradition and its current practice. We authors address these matters with deep commitment to our shared Lutheran tradition, yet also with profound respect for what the Holy Spirit has done across the centuries in other orthodox traditions of the Great Church. Welcome to our conversation, a conversation the church has shared--though not without dispute--for centuries (from Chapter 1).
