As schools emptied, remote learning rapidly expanded through online services and video chatrooms. Unfortunately, this disrupted many students and teachers who were not accustomed to remote classrooms. This challenge has forced K-12 teachers to think differently about teaching. Unexpectedly and with little time to prepare, they have been confronted with redesigning their curriculum and instruction from face-to-face to online virtual classrooms to protect students from the COVID-19 virus while ensuring that these new online initiatives remain sustainable and useful in the post-pandemic world. As teachers learn to take advantage of the affordances and strengths of the multiple technologies available for virtual classroom instruction, their instruction both in online and face-to-face will impact what and how students learn in the 21st century. The Handbook of Research on Transforming Teachers' Online Pedagogical Reasoning for Engaging K-12 Students in Virtual Learning examines the best practices and pedagogical reasoning for designing online strategies that work for K-12 virtual learning. The initial section provides foundational pedagogical ideas for constructing engaging virtual learning environments that leverage the unique strengths and opportunities while avoiding the weaknesses and threats of the online world. The following chapters present instructional strategies for multiple grade levels and content areas: best practices that work, clearly describing why they work, and the teachers' pedagogical reasoning that supports online implementations. The chapters provide ways to think about teaching in virtual environments that can be used to guide instructional strategy choices and recognizes the fundamental differences between face-to-face and virtual environments as an essential design component. Covering such topics as K-12 classrooms, pedagogical reasoning, and virtual learning, this text is perfect for professors, teachers, students, educational designers and developers, instructional technology faculty, distance learning faculty, and researchers interested in the subject.

From across a range of precarious and relatively secure positions, authors consider the changing politics of queer theory and the shifting practices of queers who, in moving from the margins toward the academic mainstream, differently negotiate resources, recognition, and returns. Contributors engage queer redistributions in all tiers of the class-stratified academy and across the UK, the US, Australia, Armenia, Canada, and Spain. They both indict academic hierarchy as a form of colonial knowledge-making and explore class contradictions via first-generation epistemologies, feminist care work in the pandemic, Black working-class visibility, non-peer institutional collaborations, and student labor. The volume reflects a commitment to interdisciplinary empirical and theoretical approaches and methodologies across anthropology, Black studies, cultural studies, education, feminist and women's studies, geography, Latinx studies, performance studies, postcolonial studies, public health, transgender studies, sociology, student affairs, and queer studies. This book is for readers seeking to better understand the broad class-based knowledge project that has become a defining feature of the field of queer studies.
