Students majoring in science, technology, engineering, and mathematics often perceive that courses in their major are not related to the general education liberal arts courses required for their degrees. This separation prevents the transfer of skills between their general education courses and their degree pursuits. The false dichotomy is particularly important because solving the daunting challenges of the twenty-first century—such as drug-resistant bacteria, scarcity of natural resources, and climate change—requires global citizens armed with robust, complex abilities who can integrate interdisciplinary concepts with bold technologies. Contributors to this book explore ways in which this dichotomy can be overcome.

technical writing degree programs: Writing Majors Greg Giberson, Jim Nugent, Lori Ostergaard, 2015-02-15 The writing major is among the most exciting scenes in the evolving American university. Writing Majors is a collection of firsthand descriptions of the origins, growth, and transformations of eighteen different programs. The chapters provide useful administrative insight, benchmark information, and even inspiration for new curricular configurations from a range of institutions. A practical sourcebook for those who are building, revising, or administering their own writing majors, this volume also serves as a historical archive of a particular instance of growth and transformation in American higher education. Revealing bureaucratic, practical, and institutional matters as well as academic ideals and ideologies, each profile includes sections providing a detailed program review and rationale, an implementation narrative, and reflection and prospectation about the program. Documenting eighteen stories of writing major programs in various stages of formation, preservation, and reform and exposing the contingencies of their local and material constitution, Writing Majors speaks as much to the “how to” of building writing major programs as to the larger “what,” “why,” and “how” of institutional growth and change.

technical writing degree programs: Technical and Business Communication in Two-year Programs Wendall Keats Sparrow, Nell Ann Pickett, 1983 Designed chiefly for the growing number of technical and business writing teachers in two year colleges, this collection of articles helps teachers understand technology and business students so that they can teach courses that satisfy the writing needs of those students. Written by practicing teachers or writers, the articles offer viewpoints on central issues. Principal assignments in freshman and sophomore courses in technical and business writing are given primary emphasis. Because of their multidisciplinary orientation, many of the selections are presented as resources for teachers in writing-across-the-curriculum programs. The articles are divided into six parts, arranged essentially in the order that teachers would use the materials. Each part addresses a central concern of teaching technical and business communication in two year programs: (1) preparing to teach the subject for the first time, (2) designing the basic course, (3) broadening the basic course or designing a program, (4) developing classroom strategies, (5) constructing effective assignments, and (6) teaching report writing. The book ends with an extensive bibliography of resources designed to help teachers of technical and business writing grow as professionals. (HTH)
