technology articles for students: Technology in Retrospect Richard A. Diem, Michael J. Berson, 2010-06-01 January 2009 marked the 25th anniversary of one of the most famous three minutes of television history. It was during half-time of the 1984 Super Bowl that APPLE show cased its new Macintosh Computer in an avant-guard commercial. In the following three weeks sales of the new computer, in both the public and private sectors, took off leading some to note this occasion as the true start of the information age. At the same time schools joined this so-called information revolution and began to use the new technology, in various forms, in a much more serious manner. Given both the changing nature of technology, as well as its classroom applications, over the past quarter century this work's goal is to capture the historical trends of both use and application of information technology in the social studies during this era. This is done by providing a retrospective view , from 1984 through 2009 , of where we've been, where we are, and a view of new tools and strategies and possible studies that are emerging that can enhance our understanding of the effects that technology has and will have on the social studies.

Everyone who wrote a chapter strives to improve STEM education to help others implement standards-based STEM instruction that takes learning in isolation to greater accountability through integrated and meaningful tasks that answer the question every teacher dreads: When am I going to use this? The PBLs were written to implement in middle and high-school classrooms. All of them are interdisciplinary in nature. We have divided them into six themes: construction and design, water, environment, mixtures, technology, nutrition and genetics. Each lesson contains a "schedule at a glance" and the "well-defined outcome" so you can quickly see how a particular PBL fits into your curriculum. Objectives are listed along with STEM connections written as objectives. We have included all materials needed and then each day of activities including an imbedded engagement, exploration, explanation, evaluation (including rubrics), and extension. We have tried to include everything necessary for successful implementation. This practical book is the perfect companion to the handbook for learning about implementing PBLs: Project-Based Learning: An Integrated Science, Technology, Engineering, and Mathematics (STEM) Approach - second edition.

technology articles for students: Learning First, Technology Second in Practice Liz Kolb, 2020 After observing teachers and students interact with technology over many years, Liz Kolb began to wonder: How do we move students from a high-attention, low-commitment to learning with digital devices to a high-attention, high-commitment to learning tasks? Her observations led her down a path of extensive research that informed the development of the Triple E Framework (covered in the 2017 ISTE book *Learning First, Technology Second*). Kolb found that teachers needed a framework based on good learning practices with technology rather than a focus on technology tools themselves. With this in mind, she developed the Triple E Framework, in which the learning goal - not the tool - is the most important element of a given lesson. Understanding how students learn is built into the Triple E Framework, allowing teachers to choose the tool and pedagogical strategies that best fit the learning goal. Ultimately, the Triple E Framework is meant to support the teacher in making choices with technology and instructional strategies based on the learning goal and the science of learning. For *Learning First, Technology Second* readers, this book will build on their knowledge, providing a brief overview as well as new research, scenarios, cases and ideas for using technology in education. For readers new to the framework, this book will provide all of the essential research and tools mentioned above, along with an overview of the framework, so they can apply what they learn without missing a beat--
