tech axe digital marketing: Gender Commerce. Past development and new technologies in online marketing to influence customers' buying behavior Viviane Dorp, 2017-05-12 Bachelor Thesis from the year 2017 in the subject Business economics - Offline Marketing and Online Marketing, grade: 1,7, University of Frankfurt (Main), language: English, abstract: Gender marketing as a new holistic marketing approach has been intensely discussed over the last couple of years. At the first glance it can surely appear discriminating to differentiate customers by gender, but the genuine intention of gender marketing is to accept and appreciate both genders as they are and develop products according to their gender specific needs. Therefore, it is important to understand that by talking about gender it does not imply talking about fixed roles of males and females in society. Those roles have changed significantly over the last decades and are expected to continue changing over upcoming years. It rather means taking gender specific needs, wishes and characteristics in consideration while developing products and company strategies in order to achieve long-term success and customer loyalty. But why is this even relevant? Women have been buying products anyway, right? Certainly, women have been buying products without a gender specific approach already. However, the truth is that our markets are saturated and the flood of information customers are confronted with everyday exceeds their cognitive ability. This itself shows the importance of tailoring products as well as communication strategies to customers' needs. Additionally, as mentioned above, social statuses of men and women have been changing continuously. As a result of women's access to higher education, better careers and with that higher incomes independence of women has enhanced over time. Even if women already have a strong purchasing power, it has not reached its full potential, yet. What also comes along with being independent and earning own money, is making ones own decisions. Women and men differ in their general decision making process and buying behavior. Thinking of women already buying products, which do not perfectly fit their needs, in an environment (either offline or online) they do not feel completely comfortable in, it can lead to an enormous competitive advantage to adjust product and selling strategies to your customers' needs. Transferring this to e-commerce and buying behavior online, there are significant differences between male and female throughout the decision making process that draw companies' attention in order to optimize communication strategies and product

development.

tech axe digital marketing: Global Meets Digital Vinod Jain, 2023-06-02 The world today is at the intersection of two megatrends - Globalization and Digitalization - a business revolution unfolding in real time. Global Meets Digital captures the many nuances of this revolution succinctly, including its impact on our lives and business. An immediate implication of this revolution is that the economic principles that underpinned business and strategy for hundreds of years, such as diminishing returns to scale and resource scarcity, are no longer valid for a large and growing number of products and services. The book will challenge you to think differently not just about digital products, but also about physical products. In the global-digital world, products are of three kinds—physical, digital, and smart machines (products that are both physical and digital, and connected to the internet)—a distinction missed by most books on strategy and global business. The economics of each kind of products is distinct from that of the others, which has strategic implications for all kinds of businesses - implications such as how to compete and how to create and capture value. With several mini case studies and over 100 company examples, the book covers themes and cutting-edge issues like the paradox of globalization, digital disruption, disruptive business models, exponential technologies, Internet of Things, competition in digital markets, winner-take-all market dynamics, Industry 4.0, how to innovate, strategizing for the New Normal, and value creation and value capture in both B2C and B2B contexts. The book derives its underpinnings from the practice of global and digital business, while theory remains in the background. Intended specifically for an executive/professional audience, Global Meets Digital should also be of value to business students and professors learning to dip their toes into a digital world. Vinod Jain is an expert in global and digital strategy, award-winning professor, Fulbright Scholar, and author of an MBA textbook, Global Strategy. He taught at the Rutgers Business School, Newark and New Brunswick, and the Robert H. Smith School of Business, University of Maryland, College Park. At Maryland, he was also the Founding Director of the federally funded Center for

International Business Education and Research and Academic Director of Smith School's Executive MBA program in China. tech axe digital marketing: Sold Out Alex Molnar, Faith Boninger, 2015-08-07 If you strip away the rosy language of "school-business partnership," "win-win situation," "giving back to the community," and the like, what you see when you look at corporate marketing activities in the schools is example after example of the exploitation of children for financial gain. Over the long run the financial benefit marketing in schools delivers to corporations rests on the ability of advertising to "brand" students and thereby help insure that they will be customers for life. This process of "branding" involves inculcating the value of consumption as the primary mechanism for achieving happiness, demonstrating success, and finding fulfillment. Along the way, "branding" children - just like branding cattle - inflicts pain. Yet school districts, desperate for funding sources, often eagerly welcome marketers and seem not to recognize the threats that marketing brings to children's well-being and to the integrity of the education they receive. Given that all ads in school pose some threat to children, it is past time for considering whether marketing activities belong in school. Schools should be ad-free zones.
