technology in infinite craft: Technology, Industrial Conflict and the Development of Technical Education in 19th-Century England Bernard P. Cronin, 2024-11-01 This title was first published in 2001. Nineteenth-century employers played a crucial role in the training and education of young workers in England. This multi-disciplinary study traces the connection between problems of technical education development and the increasingly antagonistic relations with skilled workers, culminating in the Great Strike and Lockout of 1897. Cronin demonstrates that employers, dominated by economic short-termism, extended their hegemony beyond the boundaries of the factory gates. Their reluctance to endorse and sponsor technical education radically influenced the perception of technical education held by government and local authorities.

technology in infinite craft: The Philosophy of Mannerism Sjoerd van Tuinen, 2022-11-17
Sjoerd van Tuinen argues for the inseparability of matter and manner in the form of a group portrait of Leibniz, Bergson, Whitehead, Souriau, Simondon, Deleuze, Stengers, and Agamben. Examining afresh the 16th-century style of mannerism, this book synthesizes philosophy and aesthetics to demonstrate not only the contemporary relevance of artists such as Michelangelo or Arcimboldo but their broader significance as incorporating a form of modal thinking and perceiving. While looking at mannerism as a style that spurned the balance and proportion of earlier Renaissance models in favour of compositional instability and tension, this book also conceives of mannerism a-historically to investigate what it can tell us about continental modal metaphysics. Whereas analytical metaphysics privileges logical essence and asks whether something is possible, real, contingent, or necessary, continental philosophy privileges existence and counts as many modes as there are ways of coming-into-being. In three main parts, van Tuinen first explores the ontological, aesthetic, and ethical ramifications of this distinction. He then develops this through an extended study of Leibniz as a modal and indeed mannerist philosopher, before outlining in the final part a (neo)-mannerist aesthetics that incorporates diagrammatics, alchemy, and contemporary technologies of speculative design.
