

technology companies in toronto

technology companies in toronto represent a dynamic and rapidly growing sector within Canada's largest city, contributing significantly to innovation and economic development. Toronto has emerged as a major hub for technology enterprises, ranging from startups to global giants, driven by a highly skilled workforce, robust infrastructure, and strong government support. This article explores the landscape of technology companies in Toronto, highlighting key players, industry sectors, and the factors that make the city an attractive destination for tech businesses. Additionally, the discussion covers emerging trends and the broader impact of the tech industry on Toronto's economy. Following this introduction, a detailed table of contents outlines the main topics covered.

- Overview of Technology Companies in Toronto
- Major Technology Sectors in Toronto
- Leading Technology Companies in Toronto
- Factors Driving Growth of Tech Companies in Toronto
- Emerging Trends in Toronto's Technology Scene
- Impact of Technology Companies on Toronto's Economy

Overview of Technology Companies in Toronto

The technology sector in Toronto is characterized by a diverse array of companies specializing in software development, artificial intelligence, fintech, biotechnology, and more. Toronto's tech ecosystem benefits from the city's multicultural population and access to top-tier educational institutions, which supply a continuous stream of talented professionals. The presence of incubators, accelerators, and venture capital firms further fuels innovation and business growth. Over the past decade, technology companies in Toronto have expanded their reach globally, establishing the city as a key player on the international tech stage.

Major Technology Sectors in Toronto

Toronto's technology industry encompasses several key sectors, each contributing uniquely to the city's innovation landscape. These sectors are supported by specialized expertise and tailored infrastructure, enabling sustainable growth.

Software Development and IT Services

Software development remains a cornerstone of Toronto's tech companies, with firms focusing on everything from enterprise software solutions to mobile app development. IT service providers also

play a critical role in supporting business operations across various industries.

Artificial Intelligence and Machine Learning

Toronto is recognized as a global hub for artificial intelligence research and development, thanks in large part to institutions like the Vector Institute. Technology companies in Toronto leverage AI and machine learning to create advanced products in healthcare, finance, and autonomous systems.

Financial Technology (Fintech)

The fintech sector has seen rapid expansion in Toronto, driven by innovative startups and established banks investing in digital transformation. Companies are developing solutions in payments, blockchain, lending platforms, and risk management.

Biotechnology and Health Tech

Biotech and health technology companies in Toronto are at the forefront of developing medical devices, pharmaceuticals, and health data analytics. Collaborations between technology firms and healthcare institutions enhance research and product development.

Leading Technology Companies in Toronto

Toronto hosts a range of prominent technology companies that have made significant contributions both locally and globally. These companies vary in size and specialization but share a commitment to innovation.

- **Shopify:** Originally founded in Ottawa but with significant operations in Toronto, Shopify is a leading e-commerce platform that powers online stores worldwide.
- **Wealthsimple:** A fintech company specializing in investment management and financial advisory services, Wealthsimple leverages technology to simplify personal finance.
- **Ritual:** A social ordering app that connects users with local restaurants, Ritual exemplifies Toronto's strength in mobile technology and consumer engagement.
- **FreshBooks:** A cloud-based accounting software provider tailored for small businesses and freelancers, headquartered in Toronto.
- **PointClickCare:** A health tech company offering cloud-based software solutions for senior care providers, with a strong presence in the Toronto tech ecosystem.

Factors Driving Growth of Tech Companies in Toronto

The expansion of technology companies in Toronto is supported by several critical factors, including talent availability, infrastructure, and supportive policies.

Skilled Workforce and Education

Toronto benefits from a large pool of highly educated workers, with graduates from renowned universities such as the University of Toronto, Ryerson University, and York University. These institutions provide strong programs in computer science, engineering, and business, ensuring a continuous supply of qualified candidates.

Access to Capital and Investment

Venture capital firms and government funding programs play a vital role in supporting startups and scale-ups. Toronto's investment climate encourages innovation and risk-taking, which is essential for technology companies to thrive.

Government Support and Policies

Local and provincial governments offer incentives such as tax credits, grants, and innovation programs designed to attract and retain technology companies. These initiatives help reduce operational costs and stimulate research and development activities.

Collaborative Ecosystem

Toronto's tech ecosystem fosters collaboration among companies, research institutions, and industry groups. This environment promotes knowledge sharing and accelerates technological advancements.

Emerging Trends in Toronto's Technology Scene

Technology companies in Toronto are adapting to and driving several emerging trends that shape the future of the industry.

Focus on Artificial Intelligence and Automation

AI-driven automation is increasingly integrated into business operations across sectors, enhancing efficiency and enabling new capabilities. Toronto continues to be a leader in AI research and application development.

Growth of Remote Work Technologies

The rise of remote work has spurred demand for collaboration tools, cybersecurity solutions, and cloud services. Toronto-based companies are innovating to meet these new workplace dynamics.

Sustainability and Green Technology

Environmental sustainability is becoming a priority, with technology companies developing green technologies and sustainable business practices. Toronto supports initiatives focused on clean energy, waste reduction, and sustainable urban development.

Expansion of Health and Biotech Innovations

The intersection of technology and healthcare continues to expand, with Toronto's tech firms playing a crucial role in telemedicine, digital health records, and personalized medicine.

Impact of Technology Companies on Toronto's Economy

The growth of technology companies in Toronto has a profound impact on the city's economy, contributing to job creation, GDP growth, and global competitiveness.

Job Creation and Talent Attraction

The tech sector is a major employer in Toronto, attracting professionals from across Canada and around the world. The demand for tech talent creates opportunities in various roles, from software engineering to data science.

Economic Diversification and Innovation

Technology companies diversify Toronto's economic base, reducing reliance on traditional industries. Innovation driven by tech firms stimulates productivity and creates new market opportunities.

Global Recognition and Investment

Toronto's reputation as a technology hub attracts international investors and companies seeking to establish a presence in North America. This global attention reinforces the city's status as a leading innovation center.

Community Development and Infrastructure

Investment by technology companies often leads to improvements in urban infrastructure and community development, including smart city initiatives and enhanced connectivity.

Frequently Asked Questions

What are some of the leading technology companies based in Toronto?

Some of the leading technology companies in Toronto include Shopify, Wattpad, Kik Interactive, Ritual, and FreshBooks, which are known for their innovations in e-commerce, social media, messaging apps, food tech, and cloud accounting respectively.

How is Toronto's technology sector contributing to the local economy?

Toronto's technology sector significantly contributes to the local economy by creating high-paying jobs, attracting global talent and investment, fostering innovation through startups and incubators, and supporting related industries such as finance, healthcare, and education.

What industries are Toronto technology companies primarily focused on?

Toronto technology companies primarily focus on industries such as fintech, artificial intelligence, health technology, software development, e-commerce, and clean technology, reflecting the city's diverse and growing innovation ecosystem.

How does Toronto support the growth of technology startups?

Toronto supports technology startups through various initiatives including government grants, incubators like MaRS Discovery District, accelerator programs, venture capital availability, co-working spaces, and partnerships with universities and research institutions.

What role does diversity play in Toronto's tech companies?

Diversity plays a crucial role in Toronto's tech companies by fostering inclusive work environments that drive creativity, innovation, and better problem-solving. Many tech firms in Toronto actively promote diversity and inclusion initiatives to reflect the city's multicultural population.

Are there any notable technology events or conferences held in Toronto?

Yes, Toronto hosts several notable technology events and conferences such as Collision Conference, Elevate Tech Festival, and CIX (Canadian Innovation Exchange), which bring together industry

leaders, startups, investors, and innovators to network and share knowledge.

Additional Resources

1. *Tech Titans of Toronto: The Rise of a Digital Hub*

This book explores the history and growth of Toronto as a burgeoning center for technology companies. It highlights key players, startups, and multinational corporations that have established their presence in the city. Readers gain insight into the innovation culture and economic impact of Toronto's tech scene.

2. *InnovateTO: Stories from Toronto's Leading Tech Entrepreneurs*

Through a collection of interviews and case studies, this book showcases the journeys of entrepreneurs who have launched successful tech ventures in Toronto. It delves into their challenges, breakthroughs, and visions for the future of technology. The book serves as both inspiration and practical guidance for aspiring founders.

3. *Silicon Maple Leaf: How Toronto Became Canada's Tech Powerhouse*

Detailing the evolution of the Canadian tech ecosystem, this book focuses on Toronto's role in transforming the country's digital landscape. It examines government policies, investment trends, and the collaborative environment that foster innovation. Readers will understand the factors that propelled Toronto onto the global tech map.

4. *AI in the 6ix: Toronto's Journey to Artificial Intelligence Excellence*

Focusing on Toronto's leadership in artificial intelligence research and development, this book highlights the city's AI startups, research institutions, and corporate initiatives. It discusses breakthroughs in machine learning, neural networks, and ethical AI practices. The narrative provides a comprehensive view of how AI is shaping Toronto's tech future.

5. *From Startup to Scale-Up: Toronto's Tech Success Stories*

This book chronicles the growth trajectories of several Toronto-based technology companies that have successfully scaled their operations. It offers insights into funding strategies, market expansion, and product development. Entrepreneurs and business students will find valuable lessons on scaling a tech business within a competitive environment.

6. *Women Leading Tech: Toronto's Female Innovators*

Highlighting the contributions of women in Toronto's technology sector, this book celebrates female founders, executives, and engineers who are driving innovation. It addresses gender diversity challenges and showcases initiatives aimed at empowering women in tech. The stories inspire a more inclusive and dynamic tech community.

7. *GreenTech Toronto: Technology for a Sustainable Future*

Examining Toronto's emerging green technology companies, this book highlights innovations in clean energy, sustainable materials, and environmental monitoring. It discusses how tech firms in the city are addressing climate change and promoting eco-friendly solutions. Readers will discover the intersection of technology and sustainability in an urban context.

8. *Toronto Tech Giants: Inside the World of Leading Corporations*

This book provides an in-depth look at major technology corporations headquartered or with significant operations in Toronto. It covers corporate strategies, product innovations, and their impact on the local and global markets. The narrative sheds light on how these giants influence the city's

tech ecosystem.

9. *Building the Future: Toronto's Tech Incubators and Accelerators*

Focusing on the support systems that nurture startups in Toronto, this book explores the role of incubators, accelerators, and co-working spaces. It highlights success stories emerging from these programs and the collaborative networks they create. The book is a valuable resource for entrepreneurs seeking to navigate Toronto's tech startup landscape.

technology companies in toronto: A Smarter Toronto Bob Hanke, 2024-02-19 This book bridges media, technocultural, urban, and journalism studies to examine the role of journalism in relation to a smart city project on Toronto's waterfront. From the announcement of the public-private partnership called Sidewalk Toronto to the project's termination, a mediatized controversy unfolded. Through an assemblage approach to this project and a case study of The Globe and Mail and the Toronto Star, it follows the actors and chronicles the Quayside project story as a conversation about the promise and perils of a future "smart" neighbourhood. In the news of Waterfront Toronto, Sidewalk Labs, other actors, events, and developments, there were multiple voices and views, interpretations and arguments, that manifested conflicting interests and values. As a locally situated actor, journalism produced a porous discourse that expressed a propose-and-public pushback movement. This work of articulating mediation conditioned the project's alteration and dissolution within asymmetrical relations of power. In addition to a wave of opposition that inflected the project's enactment, a time lag between project time and governmental policymaking made the controversy over this future urban space intractable. With their residual symbolic power, quality journalism contributed to dialogical urban learning.

technology companies in toronto: Beyond Silicon Valley: Thriving Tech Hubs Around the Globe Ahmed Musa, 2025-01-02 Silicon Valley may be the most famous tech hub, but there are many other regions around the world where innovation and entrepreneurship are flourishing. This book highlights emerging tech hubs in cities like Bangalore, Berlin, and Toronto, exploring what makes them unique and how they support startups. Discover the diverse ecosystems, resources, and talent pools that make these cities ideal for tech entrepreneurs. Whether you're looking to start a company or relocate for career opportunities, this book offers a global perspective on where the next wave of innovation is happening.

technology companies in toronto: Global Fintech Revolution Lerong Lu, 2024-09-23 Lerong Lu examines the biggest change in modern financial industry - the Fintech (financial technology) revolution - that denotes the close interaction between the financial services industry and latest information technologies such as big data, cloud computing, blockchain, and artificial intelligence. The three areas of banking institutions, online lending marketplaces, and money and payment systems are explored to assess how financial innovations affect the traditional financial industry, what kinds of regulatory challenges arise, and how global policymakers react to such challenges. With in-depth and international case studies on Fintech, including app-based banking services, mobile payments, P2P lending, and cryptocurrencies, the global Fintech hubs in six continents are

assessed. The complex, dynamic, and multidimensional Fintech ecosystem is also investigated including its key players (such as regulatory strategy, regulatory sandbox, and RegTech) and Fintech corporations (including financial holding companies, Fintech unicorns, BigTech firms, and Metaverse platforms). Lu highlights the enormous benefits for financial institutions and their consumers and argues that Fintech contributes to a more equal, democratic, inclusive, and sustainable financial system. However, he also considers the risks and multiple legal, ethical, and regulatory challenges for policy-makers and financial authorities that Fintech has posed.

technology companies in toronto: North American Food Processing Technologies IICA - CIDA Project P. G. Muller, 1990 Identification of major processed food products. Rationale. Identification and preparation of long list of food processing technologies. Development of a short list of technologies. Results of evaluation.

technology companies in toronto: High-Tech Entrepreneurship Michel Bernasconi, Simon Harris, Mette Moensted, 2013-01-11 High-tech businesses form a crucial part of entrepreneurial activity – in some ways presenting very typical examples of entrepreneurship, yet in some ways representing quite different challenges. The uncertainty in innovation and advanced technology makes it difficult to use conventional economic planning models, and also means that the management skills used in this area must be more responsive to issues of risk, uncertainty and evaluation than in conventional business opportunities. Specifically focusing on the mix of theory and practice needed to accurately inform students, the key topics covered include: uncertainty and innovation entrepreneurial finance marketing technological innovations high-tech incubation management. Including case studies to give practical insights into genuine business examples, this comprehensive book has a distinctly ‘real-world’ focus throughout. Edited by a multi-national team, it draws together leading writers and researchers from across Europe, making it a must-read for all those involved in advanced entrepreneurship with specific interests in high-tech start-ups.

technology companies in toronto: The Tale of Technology AMIR HUSSAIN, 2024-09-23 The Tale of Technology is an important source in the context of understanding the evolving landscape of information technology (IT). The book is easy to understand and is a valuable source of information for individuals and entities engaged in or exploring the technology industry. The significance of this book is rooted in 2 main trends: a careful examination of current IT trends and an exploration of emerging technologies pushing to reshape the IT sector in the next 10 years. It is a must-have on the shelves for Aspiring Individuals: The book is relevant for anyone with the ambition to embark on a business journey within the technology industry. Serves as a foundation guide for those considering a career or a business in the tech sector. Business Leaders: The book is recommended for leaders in key roles across various functions within technology companies, such as individuals overseeing Sales, Marketing, Engineering, Product Development, Services, Operations, and Finance. Entrepreneurs: The book is valuable for entrepreneurs actively involved in establishing and developing their technology-focused businesses. The details in every chapter address strategic, operational, and visionary aspects of entrepreneurship in the tech sector. Professionals: The book is beneficial for professionals contributing to different functions within an organization indicating a broad applicability of the scenarios quoted in the book, suggesting insights and knowledge applicable across diverse roles within a tech-centric enterprise. Startups: Those at the inception of their business journey within the technology industry are encouraged to consider this book an essential resource. The content is tailored to provide insights and guidance relevant to startup ventures' unique challenges and opportunities. A captivating collection of ten thought-provoking chapters on technology and the connected business. This meticulously researched and well-peer-reviewed guide offers an insightful journey through the intricate world of technology business in the 21st century. Explore everything from the origins of industrial revolutions to the complexities of today's IT landscapes. Consider it your curated guide to understanding the powerful interplay between Information Technology and Business.

technology companies in toronto: Smart Cities Oliver Gassmann, Jonas Böhm, Maximilian Palmié, 2019-06-14 Transforming cities through digital innovations is becoming an imperative for

every city. However, city ecosystems widely struggle to start, manage and execute the transformation. This book aims to give a comprehensive overview of all facets of the Smart City transformation and provides concrete tools, checklists, and guiding frameworks.

technology companies in toronto: *Toronto Stories* Logan Bell, AI, 2025-02-20 *Toronto Stories* explores the multifaceted history and vibrant culture of Canada's largest city, revealing how successive waves of immigration and key historical events have shaped its unique identity. The book delves into the city's evolution from a colonial outpost to a global hub, highlighting the impact of multiculturalism and ethnic enclaves on Toronto's social fabric. It examines how Toronto's diverse population has contributed to its dynamic arts scene, showcasing the role of public art, independent galleries, and major institutions in shaping the city's cultural identity. The book unfolds across three sections, beginning with an exploration of Toronto as a city of immigration, examining the historical context of immigration policies. It then transitions to Toronto's cultural and artistic evolution before delving into significant historical events and landmarks, from its colonial past to its industrial growth. Drawing upon archival research, oral histories, and contemporary analyses, the book provides an engaging narrative that balances historical facts with compelling stories, making it valuable for both academic and general readers interested in travel and history.

technology companies in toronto: *The Industrial Geography of Canada* Anthony Blackbourn, Robert G. Putnam, 2025-10-01 First published in 1984, *The Industrial Geography of Canada* provides a comprehensive overview of the Canadian industry. It introduces Canada's physical and human resources, describes the settlement pattern and charts the development of industry from 1945. The main characteristics of each province's industry are outlined in detail: the poor remote Atlantic provinces, where attracting industry is a major problem; Quebec, where the distinct French-Canadian culture poses problems; the American domination of Ontario; the resource boom of Alberta; and the developing resource-based industries of British Columbia and the North. The book concludes with an examination of the prospects for successful national development goals in a country where regionalism is so strong. *The Industrial Geography of Canada* is a valuable text for all geographers with a particular interest in Canada.

technology companies in toronto: *Sideways* Josh O'Kane, 2024-11-12 From the tech reporter who most closely pursued the Sidewalk Labs fiasco in Toronto, an uncompromising look into what the Google sister company's failure in urban development reveals about Big Tech, data and the monetization of everything. When former New York deputy mayor Dan Doctoroff landed in Toronto, promising a revolution in better living through technology, the locals were starstruck. In 2017, a small parcel of land on the city's underdeveloped lakeshore was available for development, and with Google co-founder Larry Page and chairman Eric Schmidt leaning into Sidewalk Labs' pitch for the long-forsaken property—with Doctoroff as the urban-planning company's CEO—Sidewalk's bid crushed the competition. But as soon as the bid was won, cracks appeared in the partnership between Doctoroff's team and Waterfront Toronto, the government-sponsored organization behind the contest. Hundreds more acres of undeveloped former port lands kept creeping into Sidewalk's plans, and questions were emerging about how much the public would benefit from the company's vision for a high-tech neighbourhood—and the data it could harvest from residents. The ensuing fight to reel in the power of Sidewalk Labs became a crucible moment for the worldwide battle for digital rights and against the extension of a digital behemoth's corporate might into the physical world. In the tradition of boardroom dramas like *Bad Blood* and *Super Pumped*, *Sideways* signals to the world that all may not be lost in the effort to contain the rapidly growing power of Big Tech.

technology companies in toronto: *Road to Nowhere* Paris Marx, 2025-08-12 How to build a transportation system to provide mobility for all *Road to Nowhere* exposes the flaws in Silicon Valley's vision of the future: ride-hailing services such as Uber and Lyft to take us anywhere; electric cars to make them 'green'; and automation to ensure transport is cheap and ubiquitous. Such promises are implausible and potentially dangerous. As Paris Marx shows, these technological visions are a threat to our ideas of what a society should be. Electric cars are not a silver bullet for sustainability, and autonomous vehicles won't guarantee road safety. There will not be underground

tunnels to eliminate traffic congestion, and micromobility services will not replace car travel any sooner than we will see the arrival of the long-awaited flying car. In response, Marx offers a vision for a more collective way of organizing transportation systems that considers the needs of poor, marginalized, and vulnerable people. The book argues that rethinking mobility can be the first step in a broader reimagining of how we design and live in our future cities. We must create streets that allow for social interaction and conviviality. We need reasons to get out of our cars and to use public means of transit determined by community needs rather than algorithmic control. Such decisions should be guided by the search for quality of life rather than for profit.

technology companies in toronto: Solved David Miller, 2024-03-01 If our planet is going to survive the climate crisis, we need to act rapidly. Taking cues from progressive cities around the world, including Los Angeles, New York, Toronto, Oslo, Shenzhen, and Sydney, this book is a summons to every city to make small but significant changes that can drastically reduce our carbon footprint. We cannot wait for national governments to agree on how to reduce greenhouse gas emissions and manage the average temperature rise to within 1.5 degrees. In *Solved*, David Miller argues that cities are taking action on climate change because they can – and because they must. The updated paperback edition of *Solved: How the World's Great Cities Are Fixing the Climate Crisis* demonstrates that the initiatives cities have taken to control the climate crisis can make a real difference in reducing global emissions if implemented worldwide. By chronicling the stories of how cities have taken action to meet and exceed emissions targets laid out in the Paris Agreement, Miller empowers readers to fix the climate crisis. As much a “how to” guide for policymakers as a work for concerned citizens, *Solved* aims to inspire hope through its clear and factual analysis of what can be done – now, today – to mitigate our harmful emissions and pave the way to a 1.5-degree world.

technology companies in toronto: OECD Territorial Reviews: Toronto, Canada 2009 OECD, 2010-03-11 This OECD Territorial Review of Toronto proposes a new sustainable competitiveness agenda to enhance productivity, focusing on innovation, cultural diversity and infrastructure, as well as on green policies for this key economic region of Canada.

technology companies in toronto: History of Central Soya Co., Inc. and of the McMillen Family's Work with Soybeans and Soy Ingredients (1934-2020) William Shurtleff; Akiko Aoyagi, 2020-08-17 The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographical index. 91 photographs and illustrations - many in color. Free of charge in digital PDF format on Google Books.

technology companies in toronto: Who's Who in Canadian Business 2001 Gillian K. Holmes, Evelyn Davidson, 2001-03-01 *Who's Who in Canadian Business*, now in its 21st year, is a comprehensive and independent guide to Canada's business elite. Listing over 5,000 corporate and entrepreneurial leaders, each with a detailed biography and contact information, this directory is an excellent resource for anyone needing information on Canada's business world. Biographies include such information as current employment, address, education, career history, publications, favourite charities, and honours. Those listed are included because of the positions they hold in Canadian business and industry, or because of the contributions they have made to business in Canada. The directory is updated annually; new and updated biographies are marked for easy reference. All biographies are indexed by company name. Included in this edition is the PROFIT 100 / Next 100 listing of Canada's fastest-growing companies, as well as a list of professional associations, each with full address, contact names, and a brief description.

technology companies in toronto: Venture Capital & Private Equity Yearbook , 2003

technology companies in toronto: Getting and Staying Listed in Canada Timothy Sean Baikie, 2003

technology companies in toronto: Artificial Intelligence and the City Federico Cugurullo, Federico Caprotti, Matthew Cook, Andrew Karvonen, Pauline McGuirk, Simon Marvin, 2023-12-01 This book explores in theory and practice how artificial intelligence (AI) intersects with and alters the city. Drawing upon a range of urban disciplines and case studies, the chapters reveal the multitude of repercussions that AI is having on urban society, urban infrastructure, urban

governance, urban planning and urban sustainability. Contributors also examine how the city, far from being a passive recipient of new technologies, is influencing and reframing AI through subtle processes of co-constitution. The book advances three main contributions and arguments: First, it provides empirical evidence of the emergence of a post-smart trajectory for cities in which new material and decision-making capabilities are being assembled through multiple AIs. Second, it stresses the importance of understanding the mutually constitutive relations between the new experiences enabled by AI technology and the urban context. Third, it engages with the concepts required to clarify the opaque relations that exist between AI and the city, as well as how to make sense of these relations from a theoretical perspective. *Artificial Intelligence and the City* offers a state-of-the-art analysis and review of AI urbanism, from its roots to its global emergence. It cuts across several disciplines and will be a useful resource for undergraduates and postgraduates in the fields of urban studies, urban planning, geography, architecture, urban design, science and technology studies, sociology and politics.

technology companies in toronto: *We, the Data* Wendy H. Wong, 2023-10-10 A rallying call for extending human rights beyond our physical selves—and why we need to reboot rights in our data-intensive world. Winner of the 2024 Balsillie Prize for Public Policy Shortlisted, 2024 Lionel Gelber Prize Our data-intensive world is here to stay, but does that come at the cost of our humanity in terms of autonomy, community, dignity, and equality? In *We, the Data*, Wendy H. Wong argues that we cannot allow that to happen. Exploring the pervasiveness of data collection and tracking, Wong reminds us that we are all stakeholders in this digital world, who are currently being left out of the most pressing conversations around technology, ethics, and policy. This book clarifies the nature of datafication and calls for an extension of human rights to recognize how data complicate what it means to safeguard and encourage human potential. As we go about our lives, we are co-creating data through what we do. We must embrace that these data are a part of who we are, Wong explains, even as current policies do not yet reflect the extent to which human experiences have changed. This means we are more than mere “subjects” or “sources” of data “by-products” that can be harvested and used by technology companies and governments. By exploring data rights, facial recognition technology, our posthumous rights, and our need for a right to data literacy, Wong has crafted a compelling case for engaging as stakeholders to hold data collectors accountable. Just as the Universal Declaration of Human Rights laid the global groundwork for human rights, *We, the Data* gives us a foundation upon which we claim human rights in the age of data.

technology companies in toronto: *Smart Cities in Canada: Digital Dreams, Corporate Designs* Mariana Valverde, Alexandra Flynn, 2020-10-13 Smart cities use surveillance, big data processing and interactive technologies to reshape urban life. Transit riders can see the bus coming on a map on their phones. Cities can measure and analyze the garbage collected from every household. Businesses can track individuals' movements and precisely target advertisements. Google's failed Sidewalk Labs proposal in Toronto, which drew sharp criticism over surveillance and privacy concerns, is just one of the many smart city projects which have been proposed or are underway in Canada. Iqaluit, Edmonton, Guelph, Montreal, Toronto and other cities and towns are all grappling with how to use these technologies. Some cities have quickly partnered with digital giants like Uber, Bell and IBM. Others have kept their distance. Big tech companies are hard at work recruiting customers and shaping – sometimes making – public policy on data collection and privacy. *Smart Cities for Canada: Promise and Perils* is the first book on smart cities in Canada. In this collection, experts from across the country investigate what this new approach means for the problems cities face, and expose the larger issues about urban planning and democracy raised by smart city technology. This is a valuable, timely, independent-minded book for Canadians.
