technology innovation agency logo: Footprints McLean Sibanda, 2021-09-06 Footprints is a captivating story about intellectual property (IP). It speaks to its role in society, trade, industry, and economy and expounds on the actual meaning of IP. The book lays a solid foundation for innovators, entrepreneurs, businesses, and nations to realise their full potential through IP policy, legislation, use and practices. McLean Sibanda shares his personal story, together with stories and testimonies of fellow travellers, taking us through their journey into the field of IP. He meticulously recounts South Africa's path in transforming the management of IP emanating from publicly financed research and development (R&D), development of critical human capital and other infrastructure to ensure effective IP commercialisation and technology transfer. Footprints is a timely masterpiece given IP issues in Africa's scramble for Covid-19 vaccines and implementation of the agreement establishing the African Continental Free Trade Area (AfCFTA). The book provides strategies of how African countries can use IP and innovation to develop industries to ensure health security and trading of goods that can benefit from the AfCFTA. Narrated through a series of significant moments, Footprints demonstrates the importance of vision, solid foundation, collaboration, champions, and intentional steps, for economic transformation. With glimpses into how countries such as China and Korea used IP to develop their economies, this book makes a compelling case for embracing IP, increased R&D investment, relevant human capital, and appropriate use of IP, in the development of new products and services necessary for knowledge-based and industrialised economies. Footprints is a must-read for any academic, aspiring intellectual property scholar, policy maker, economist, development activist, entrepreneur, researcher, innovator, professional, and technology transfer specialist. Intellectual property is everywhere around us and impacts our lives. For entrepreneurs and businesses alike, intellectual property is about value creation, it is the insurance you need for when you succeed. – McLean Sibanda

technology innovation agency logo: Research Handbook on Innovation Governance for Emerging Economies Stefan Kuhlmann, Gonzalo Ordóñez-Matamoros, 2017-01-27 Although in recent years some emerging economies have improved their performance in terms of R&D investment, outputs and innovative capacity, these countries are still blighted by extreme poverty,

inequality and social exclusion. Hence, emerging countries are exposed to conditions which differ quite substantially from the dominant OECD model of innovation policy for development and welfare. This Research Handbook contributes to the debate by looking at how innovation theory, policy and practice interact, and explains different types of configurations in countries that are characterized by two contrasting but mutually reinforcing features: systemic failure and resourcefulness. Focusing on innovation governance and public policies, it aims to understand related governance failures and to explore options for alternative, more efficient approaches.

2023) Manyane Makua, Mariam Akinlolu, Mashango Sithole, Phiwayinkosi Gumede, Cebo Nyondo, Ntombikhona Khuzwayo, Mandlenkosi Mhlongo, 2023-11-03 This is an open access book. The 2023 Focus Conference will focus on Goal Four (Quality Education) of the United Nations (UN) Sustainable Development Goals (SGD). Goal Four is seized with providing "equal access for all women and men to affordable and quality technical, vocational and tertiary education including university." Quality education, in this context, means the ability to function, provide and derive value in society. The theme of the conference is therefore coined as "The Role of Higher Education in the Attainment of Sustainable Quality Education." Through this theme, the conference will provide a space for participants to share practical knowledge, experiences, and possible solutions to the myriad of problems that confront the higher education sector. Universities are often thought of as ivory towers far removed from the realities that confront global societies. To compound this, higher education is increasingly being questioned for its relevance in providing practical and innovative solutions to existing societal problems. Such questions often navigate around the relevance of the academic programmes being offered, curriculum, the capacity of staff, employability of graduates, and generally the ability of these institutions to understand why they exist. Indeed, higher education's role in creating a sustainable future will presumably take on greater importance as the world continues to become increasingly globalised and interdependent.

technology innovation agency logo: Promoting Entrepreneurship to Reduce Graduate Unemployment Katono, Isaac Wasswa, 2022-04-01 Based on recognition, evaluation, and exploitation of opportunities, entrepreneurship is a process that stimulates economic growth, provides us with new products and services, and serves as a solution to low unemployment rates. Hence, many governments encourage their citizens to embrace entrepreneurship as a strategy to mitigate unemployment, particularly youth and graduate unemployment. While studies show that entrepreneurship education has yielded positive results in Western countries, in other parts of the world it seems that most students still prefer to seek paid employment in their career of choice. Promoting Entrepreneurship to Reduce Graduate Unemployment seeks to expand understanding of the barriers that face graduates in becoming entrepreneurs in various countries, examining the role of educational institutions in promoting graduate entrepreneurship and evaluating governments as well as other schemes that promote graduate entrepreneurship. Although it will not be a panacea for all the obstacles that impede graduate entrepreneurship, it is hoped that this book will illuminate the entrepreneurship career path, serve as a platform for further diagnosis for reducing graduate unemployment, and highlight areas in need of further research. Covering topics such as entrepreneurial self-efficacy, career choice, and educated unemployment, it serves as a dynamic resource for educators, educational administration and faculty, government institutions, graduate students, student organizations, professionals, researchers, and academicians.

technology innovation agency logo: Bambara groundnut: Utilization and Future Prospects Victoria A. Jideani, Afam I. O. Jideani, 2021-09-27 The Bambara groundnut (BGN) or *Vigna subterranea* is an extremely hardy grain legume. As it produces reasonable yields even under conditions of drought and low soil fertility, it is also a climate-smart crop. Previously underutilized, BGN is the subject of growing interest among researchers and consumers for its balanced nutritional profile. Indigenous consumers of BGN report medicinal benefits from the plant; however, such knowledge is at risk of being lost with the urbanization and changing lifestyles of younger generations. To date, there is no comprehensive resource on the Bambara groundnut, despite market demand for plant proteins around the globe. Authored by scientists who have researched and developed patents using BGN, *Bambara Groundnut: Utilization and Future Prospects* aims to fill this gap. The text provides in-depth coverage on breeding, food and feed utilization, medicinal benefits and future research prospects. Drawing on both indigenous knowledge and cutting-edge research, *Bambara Groundnut* is the first book to fully explore the potential of this remarkable crop.

technology innovation agency logo: Technological Innovation in Legacy Sectors William B. Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems: expanding innovation and raising the rate of quality job creation. Both have roots in a neglected problem: the resistance of Legacy economic sectors to innovation. While the U.S. has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology, most of its economy is locked into Legacy sectors defended by technological/ economic/ political/ social paradigms that block competition from disruptive innovations that could challenge their models. Americans like to build technology covered wagons and take them out west to open new innovation frontiers; we don't head our wagons back east to bring innovation to our Legacy sectors. By failing to do so, the economy misses a major opportunity for innovation, which is the bedrock of U.S. competitiveness and its standard of living. *Technological Innovation in Legacy Sectors* uses a new, unifying conceptual framework to identify the shared features underlying

structural obstacles to innovation in major Legacy sectors: energy, air and auto transport, the electric power grid, buildings, manufacturing, agriculture, health care delivery and higher education, and develops approaches to understand and transform them. It finds both strengths and obstacles to innovation in the national innovation environments - a new concept that combines the innovation system and the broader innovation context - for a group of Asian and European economies. Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process. By increasingly offshoring production, the U.S. is losing important parts of its innovation capacity. Innovate here, produce here, where the U.S. took all the gains of its strong innovation system at every stage, is being replaced by innovate here, produce there, which threatens to lead to produce there, innovate there. To bring innovation to Legacy sectors, authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation. They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations. In the specific case of advanced manufacturing, the production ecosystem can be recreated to reverse jobless innovation and add manufacturing-led innovation to the U.S.'s still-strong, research-oriented innovation system.

technology innovation agency logo: Epidemics and the Health of African Nations

MISTRA MISTRA, 2019-07-25 News footage of disease in Africa is a familiar sight. Yet these outbreaks are often presented out of context, with no reference to the conditions that have triggered them. MISTRAs new book, *Epidemics and the Health of African Nations*, aims to redress that. Researchers and practitioners from within the continent explore why Africa is so vulnerable to disease, and show how this vulnerability is closely linked to political and economic factors. They demonstrate how these same factors determine the way epidemics are treated. Authors extract lessons from case studies in different parts of Africa; challenge conventional frameworks about disease to argue for a syndemics approach that takes into account the interrelationship between disease and political and socio-economic contexts; explore challenges of Africas future. They argue that a well-functioning health system is at the core of a countrys capacity to counter an epidemic. This volume brings African experts together to probe possible solutions to the continents heavy burden of disease. The insights offered will be helpful in devising policy for the control of disease and the combatting of epidemics in Africa.

technology innovation agency logo: Knowledge Production and Contradictory Functions in African Higher Education Nico Cloete, Peter Maassen, 2015-03-01 The dominant global discourse in higher education now focuses on world-class universities inevitably located predominantly in North America, Europe and, increasingly, East Asia. The rest of the world, including Africa, is left to play catch-up. But that discourse should focus rather on the tensions, even contradictions, between excellence and engagement with which all universities must grapple. Here the African experience has much to offer the high-participation and generously resourced systems of the so-called developed world. This book offers a critical review of that experience, and so makes a major contribution to our understanding of higher education.
