Safary Wa-Mbaleka, Arceli Rosario, 2022-05-05 Qualitative research is growing in Asia and globally. This is the first book to focus specifically on qualitative research in the Asian context and includes diverse contributors from Asia such as the Philippines, Singapore, Thailand, India, Oman, China, South Korea, Indonesia, Kazakhstan, Hong Kong, and from

who owns thorne research: Globalization of Defense Materials and Manufacturing

National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Defense Materials Manufacturing and Infrastructure Standing Committee, 2018-11-02 Emerging economies, social and political transitions, and new ways of doing business are changing the world dramatically. To be the leader in this competitive climate, a defense manufacturing enterprise will require up-to-date capabilities, which include improvements in materials processing, among other things. Also, national and international efforts to mitigate environmentally harmful effects of industrial processes and to improve decision making for handling and disposing of industrial contaminants adds additional requirements for any future efforts. The objective of retaining high-value materials-related manufacturing as a key national competitive capability implies a number of factors. The value of specific manufacturing capabilities could be defined not only in terms of criticality to defense systems but also in relation to technology and knowledge content, importance as a supplier to other industries, and importance to U.S. exports. Requested by Department of Defense (DoD) communities, the National Academies of Sciences, Engineering, and Medicine held a workshop in March 2015 to further explore materials and manufacturing processes. The participants explored changes in the global R&D landscape, technology awareness mechanisms—both DoD's mechanisms and other models—and collaboration models and issues in R&D. This publication summarizes the presentations and discussions from the workshop.

who owns thorne research: Storm Chasers Chinedu Nnadi, 2025-09-30 A decade ago, Alex Rivera and Maya Chen were the Gulf's boldest storm-chasing duo—and each other's great love—until a disastrous night shattered their partnership. Now a monster hurricane called Kestrel is sprinting toward the coast, fattened by record-warm seas and aimed at millions who still sleep through the sirens. When Maya discovers the official numbers don't add up—cooler seas, lower surge, safer forecasts—she suspects sabotage. Hours later, their mentor dies in a “single-car accident,” leaving behind a drive of raw data and a warning: trust only what you can touch. Forced back into the same truck they once called home, Alex and Maya plunge into walls of rain, lightning-lit sugarcane, and buckling bridges to ground-truth the storm. Each mile peels back old wounds and the wildfire chemistry they swore to bury. What they uncover is a billion-dollar scheme: a corporate giant tampering with ocean buoys and weather feeds to keep ports open, profits high—and evacuations late. When their livestream is jammed and a corrupt deputy impounds their rig, the chase becomes a rescue mission. With power grids collapsing and surge rising like a black tide, they commandeer a volunteer's skiff, mount a rooftop antenna, and race the eyewall to broadcast a real warning before entire neighborhoods drown. To stop the lie, they must survive the truth—of the storm, the conspiracy, and the love they left in the wreckage. Heart-pounding and deeply human, *Storm Chasers* is a thriller about second chances, the cost of silence, and choosing justice when every second counts.

who owns thorne research: Change Your Genes, Change Your Life Dr Kenneth R. Pelletier, 2018-10-01 Our biology is no longer destiny. Our genes respond to everything we do, according to the revolutionary new science of epigenetics. In other words, our inherited DNA doesn't rigidly determine our health and disease prospects as the previous generation of geneticists believed. Especially in the last ten years, scientists have confirmed that the vast majority of our genes are actually fluid and dynamic. An endless supply of new studies prove that our health is an expression of how we live our lives—that what we eat and think and how we handle daily stress, plus the toxicity of our immediate environment—creates an internal biochemistry that can actually turn genes on or off. Managing these biochemical effects on our genome is the new key to radiant wellness and healthy longevity. Now gaining broad credibility among scientists, the study of epigenetics is at the forefront of modern medicine. According to the author, the real upshot of the epigenetic revolution is that it opens the door to what futurists call personalized medicine. For the first time in a trade book, Dr. Pelletier explains in layperson's language the genetic biomarkers that will become the standard reference for measuring which specific lifestyle changes are required to optimize a given individual's health. In the very near future, each person's state-of-the-art genetic and epigenetic profile—matched with other precise indicators such as assays of the gut microbiome—will guide their daily health practices. This short but profound book by a world-renowned pioneer in integrative medicine introduces readers to this exciting new field, and reveals the steps that each of us can take today to change our genetic expression and thereby optimize our health for a lifetime.
