wonders center science museum tickets: Wonder Frank C. Keil, 2022-03-01 How we can all be lifelong wonderers: restoring the sense of joy in discovery we felt as children. From an early age, children pepper adults with questions that ask why and how: Why do balloons float? How do plants grow from seeds? Why do birds have feathers? Young children have a powerful drive to learn about their world, wanting to know not just what something is but also how it got to be that way and how it works. Most adults, on the other hand, have little curiosity about whys and hows; we might unlock a door, for example, or boil an egg, with no idea of what happens to make such a thing possible. How can grown-ups recapture a child's sense of wonder at the world? In this book, Frank Keil describes the cognitive dispositions that set children on their paths of discovery and explains how we can all become lifelong wonderers. Keil describes recent research on children's minds that reveals an extraordinary set of emerging abilities that underpin their joy of discovery—their need to learn not just the facts but the underlying causal patterns at the very heart of science. This glorious sense of wonder, however, is stifled, beginning in elementary school. Later, with little interest in causal mechanisms, and motivated by intellectual blind spots, as adults we become vulnerable to misinformation and manipulation—ready to believe things that aren't true. Of course, the polymaths among us have retained their sense of wonder, and Keil explains the habits of mind and ways of wondering that allow them—and can enable us—to experience the joy of asking why and how.

wonders center science museum tickets: Wonder Sophia Vasalou, 2015-04-15 Wonder has been celebrated as the quintessential passion of childhood. From the earliest stages of our intellectual history, it has been acclaimed as the driving force of inquiry and the prime passion of thought. Yet for an emotion acknowledged so widely for the multiple roles it plays in our lives, wonder has led a singularly shadowy existence in recent reflections. Philosophers have largely passed it over in silence; emotion theorists have shunned it as a case that sits awkwardly within their analytical frameworks. So what is wonder, and why does it matter? In this book, Sophia Vasalou sketches a grammar of wonder that pursues the complexities of wonder as an emotional experience that has carved colorful tracks through our language and our intellectual history, not

only in philosophy and science but also in art and religious experience. A richer grammar of wonder and broader window into its past can give us the tools we need for thinking more insightfully about wonder, and for reflecting on the place it should occupy within our emotional lives.

wonders center science museum tickets: *Fostering Empathy Through Museums* Elif M. Gokcigdem, 2016-07-19 *Fostering Empathy through Museums* features fifteen case studies with clear take-away ideas, and lessons learned by vividly illustrating a spectrum of approaches in the way museums are currently employing empathy, a critical skill that is relevant to personal, institutional, economical, and societal progress. The need is rapidly growing for empathy to serve as a lens through which we find our purpose and connection in a complex world. This demand brings with it an appetite to cultivate it through safe and trusted platforms. Museums are uniquely equipped to undertake this important mission. This book will help museum staff and leadership at all levels working at a variety of museums (from animal sanctuaries to art museums, from historic house museums to children's and science museums) to better understand the multitude of ways how empathy can be cultivated, and employed in museum setting. *Fostering Empathy through Museums* will provide inspiration, examples, and lessons learned from a balanced spectrum of museums currently employing empathy in museum setting: as an educational tool to better connect their content with the audience, as an integral element of a museum's institutional values and behavior, and as a phenomenon that is worthy of exploration on its own and as an intentional outcome. This publication provides museum professionals as well as formal and informal learning educators to receive an overview of the variety of approaches to empathy in museums, and to create a shared language and methodologies that could enable them to utilize and nurture empathy as a shared vision that would serve not only their organizational mission, but also the greater good. Empathy can be a tool, or an intentional outcome depending on the institution's objectives. Regardless of the choice, the ideas presented in this book are intended to inform and inspire institutions to unlock exciting possibilities in the areas of improved visitor experience, creative community partnerships, and contribution to social progress by bringing empathy to public discourse through institutional strategies, exhibitions, experiences, and programs. The book also provides ideas for future strategies where empathy is considered as a shared vision by museums, and a product of a museum experience that might lead to positive social impact.

wonders center science museum tickets: Resources for Teaching Elementary School Science National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution, 1996-03-28 What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a leaf safari for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators will find a wealth of information and expert guidance to meet this need in *Resources for Teaching Elementary School Science*. A completely revised edition of the best-selling resource guide *Science for Children: Resources for Teachers*, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. (Companion volumes for middle and high school are planned.) The guide annotates about 350 curriculum packages, describing the

activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits or suggested equipment, and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to: Ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area—Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science—and by type—core materials, supplementary materials, and science activity books. Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books, and magazines that will help teachers enhance their students' science education. Resources for Teaching Elementary School Science also lists by region and state about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers give names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher organizations and parents.

wonders center science museum tickets: Chemistry in Primetime and Online National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2011-08-01 It is critical that we increase public knowledge and understanding of science and technology issues through formal and informal learning for the United States to maintain its competitive edge in today's global economy. Since most Americans learn about science outside of school, we must take advantage of opportunities to present chemistry content on television, the Internet, in museums, and in other informal educational settings. In May 2010, the National Academies' Chemical Sciences Roundtable held a workshop to examine how the public obtains scientific information informally and to discuss methods that chemists can use to improve and expand efforts to reach a general, nontechnical audience. Workshop participants included chemical practitioners (e.g., graduate students, postdocs, professors, administrators); experts on informal learning; public and private funding organizations; science writers, bloggers, publishers, and university communications officers; and television and Internet content producers. Chemistry in

Primetime and Online is a factual summary of what occurred in that workshop. Chemistry in Primetime and Online examines science content, especially chemistry, in various informal educational settings. It explores means of measuring recognition and retention of the information presented in various media formats and settings. Although the report does not provide any conclusions or recommendations about needs and future directions, it does discuss the need for chemists to connect more with professional writers, artists, or videographers, who know how to communicate with and interest general audiences. It also emphasizes the importance of formal education in setting the stage for informal interactions with chemistry and chemists.
