women in science posters: *The Underrepresentation of Women in Science: International and Cross-Disciplinary Evidence and Debate* Stephen J. Ceci, Wendy M. Williams, Shulamit Kahn, 2018-04-20 There is no shortage of articles and books exploring women's underrepresentation in science. Everyone is interested--academics, politicians, parents, high school girls (and boys), women in search of college majors, administrators working to accommodate women's educational interests; the list goes on. But one thing often missing is an evidence-based examination of the problem, uninfluenced by personal opinions, accounts of "lived experiences," anecdotes, and the always-encroaching inputs of popular culture. This is why this special issue of *Frontiers in Psychology* can make a difference. In it, a diverse group of authors and researchers with even more diverse viewpoints find themselves united by their empirical, objective approaches to understanding women's underrepresentation in science today. The questions considered within this special issue span academic disciplines, methods, levels of analysis, and nature of analysis; what these articles share is their scholarly, evidence-based approach to understanding a key issue of our time.

women in science posters: *Equity for Women in Science* Cassidy R. Sugimoto, Vincent Larivière, 2023-03-21 *Equity for Women in Science* is the first large-scale empirical study of the global gender gap in science. Analyzing millions of scientific papers, the authors show that women are undervalued for their labor in science as measured through publications and citations. The data also reveal how the scientific community can promote equity.

Written for pre- and in-service teachers, as well as scholars across disciplines, this book aims to re-conceptualize the ways in which writing can best serve ethnically and linguistically diverse students, especially girls.

women in science posters: *The personality cult of Stalin in Soviet posters, 1929-1953*

Anita Pisch, 2016-12-16 From 1929 until 1953, Iosif Stalin's image became a central symbol in Soviet propaganda. Touched up images of an omniscient Stalin appeared everywhere: emblazoned across buildings and lining the streets; carried in parades and woven into carpets; and saturating the media of socialist realist painting, statuary, monumental architecture, friezes, banners, and posters. From the beginning of the Soviet regime, posters were seen as a vitally important medium for communicating with the population of the vast territories of the USSR. Stalin's image became a symbol of Bolshevik values and the personification of a revolutionary new type of society. The persona created for Stalin in propaganda posters reflects how the state saw itself or, at the very least, how it wished to appear in the eyes of the people. The 'Stalin' who was celebrated in posters bore but scant resemblance to the man Iosif Vissarionovich Dzhugashvili, whose humble origins, criminal past, penchant for violent solutions and unprepossessing appearance made him an unlikely recipient of uncritical charismatic adulation. The Bolsheviks needed a wise, nurturing and authoritative figure to embody their revolutionary vision and to legitimate their hold on power. This leader would come to embody the sacred and archetypal qualities of the wise Teacher, the Father of the nation, the great Warrior and military strategist, and the Saviour of first the Russian land, and then the whole world. This book is the first dedicated study on the marketing of Stalin in Soviet propaganda posters. Drawing on the archives of libraries and museums throughout Russia, hundreds of previously unpublished posters are examined, with more than 130 reproduced in full colour. The personality cult of Stalin in Soviet posters, 1929-1953 is a unique and valuable contribution to the discourse in Stalinist studies across a number of disciplines.

women in science posters: Girls into Science and Technology Judith Whyte, 2017-06-26 Originally published in 1985. This book describes the Girls Into Science and Technology (GIST) Project, an action research programme carried out in co-educational comprehensive schools in Greater Manchester. GIST simultaneously took action to redress the balance of girls in science and technology and investigated the reasons for the shortfall. The book highlights the world of the typical school science lab and craft workshop where boys and girls compete with each other and teachers treat the two sexes differently. It reveals how boys and girls view science and sex roles and how their attitudes changed during the course of the project. The GIST team worked with science and craft teachers to alter school factors which discourage girls from continuing with scientific and technical subjects. The author describes the reactions of teachers and pupils to intervention strategies, which included visits to schools by women working in technical jobs, development of teaching material more orientated towards girls' interests and a humanistic view of science, observations in school labs and workshops, and careers education linked to option choices in school. In the final chapters she spells out the lessons to be learned for teachers and those engaged in training, and evaluates the national impact of the GIST project.

women in science posters: *Women's Contribution to Science and Technology through ICWES Conferences* Monique Frize, Claire Deschênes, Ruby Heap, 2023-12-09 This book discusses the legacy of the conference series The International Conferences of Women Engineers and Scientists (ICWES), which spans the second half of the Twentieth Century and the beginning of the twenty-first. The book first discusses how, at a time when there were few women engineers and scientists, a group of women organized a conference, in June 1964 in New York, which attracted 486 women. They presented their scientific achievements and discussed how to attract more women in STEM. This effort was carried out by volunteers, continuing the ICWES conferences over a period of 59 years. The authors discuss the organizers, the hosting societies, the scientific content, the changes in issues over time, and how the continuity has endured. The authors also discuss the importance of global involvement, shown through past conferences in locations such as USA, UK, Italy, Poland, France, India, Ivory Coast, Hungary, Japan, Canada, and Korea. The authors also outline how the efforts were aided by the development of a not for profit Canadian corporation, the International Conference of Women in Sciences and engineering (INWES), which ensures the continuation of the conference series. Claire Deschênes and Monique Frize ensured that the conference database was digitalized and is now available at the Canadian Archive of Women in STEM, University of Ottawa Library, with the hope that researchers will continue to explore this rich database. As an important part of the Women in Science and Engineering book series, the work hopes to inspire women and men, girls and boys to study and work in STEM fields. This book is important historically because it documents a unique adventure created by women in STEM through vision and leadership. Their efforts established modes of networking and sharing their contributions in science, technology, and on gender issues.

women in science posters: Swimming Against the Tide Sandra Hanson, 2009-06-15 "They looked at us like we were not supposed to be scientists," says one young African American girl, describing one openly hostile reaction she encountered in the classroom. In this significant study, Sandra Hanson explains that although many young minority girls are interested in science, the racism and sexism in the field discourage them from pursuing it after high school. Those girls that remain highly motivated to continue studying science must "swim against the tide." Hanson examines the experiences of African American girls in science education using multiple methods of quantitative and qualitative research, including a web survey and vignette techniques. She understands the complex interaction between race and gender in the science domain and, using a multicultural and feminist framework of analysis, addresses the role of agency and resistance that encourages and sustains interest in science in African American families and communities.
