wordpress development company in usa: Spanish-Language Television in the United States Kenton T. Wilkinson, 2015-09-25 Since its introduction in the early 1960s, Spanish-language

television in the United States has grown in step with the Hispanic population. Industry and demographic projections forecast rising influence through the 21st century. This book traces U.S. Spanish-language television's development from the 1960s to 2013, illustrating how business, regulation, politics, demographics and technological change have interwoven during a half century of remarkable change for electronic media. Spanish-language media play key social, political and economic roles in U.S. society, connecting many Hispanics to their cultures of origin, each other, and broader U.S. society. Yet despite the population's increasing impact on U.S. culture, in elections and through an estimated \$1.3 trillion in spending power in 2014, this is the first comprehensive academic source dedicated to the medium and its history. The book combines information drawn from the business press and trade journals with industry reports and academic research to provide a balanced perspective on the origins, maturation and accelerated growth of a significant ethnic-oriented medium.

wordpress development company in usa: *Clean Rail Transportation Options* Ibrahim Dincer, Janette Hogerwaard, Calin Zamfirescu, 2015-09-18 This book will assess and compare several options for ammonia co-fueling of diesel locomotives with integrated heat recovery, multigeneration (including on-board hydrogen fuel production from ammonia), and emission reduction subsystems from energy, exergy, and environmental perspectives. Economic considerations will be presented to compare the cost of the proposed systems for different scenarios such as carbon-tax rates, diesel fuel cost and ammonia cost. Fossil fuel consumption and the associated negative environmental impact of their combustion is a significant global concern that requires effective, practical, and sustainable solutions. From a Canadian perspective, the Transportation Sector contributes more than 25% of national greenhouse gas emissions due to fossil fuel combustion, largely due to road vehicles (cars, light and heavy duty trucks). This is a complex and critical challenge to address, particularly in urban areas with high population density. There is a need to develop alternative energy solutions for mass passenger and freight transportation systems that will reduce both the traffic-volume of road vehicles as well as the emissions from the mass transportation systems. The book will be helpful to students in senior-level undergraduate and graduate level courses related to energy, thermodynamics, thermal sciences, combustion, HVAC&R, etc. The quantitative comparative assessment of such alternative energy systems provided by this book will be useful for researchers and professionals interested sustainable development.

wordpress development company in usa: Property Rights in Outer Space Matthew Johnson, 2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation. It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off-world frontier. Written in an engaging style, the book investigates a novel case study in the history of capitalism and 'the commons': the emergence of a nascent space mining industry, undergirded by a contentious legislative framework. In 2015, the US passed laws that would recognise the claims of US corporations to own and sell space resources. This unilateral act of pre-emptive law-making would appear to contravene the terms of the UN Outer Space Treaty (1967), which declared that the exploration and use of outer space should be 'for the benefit of all mankind' and 'not subject to national appropriation'. Using this central dynamic between privately held mining rights and outer space as a 'global commons', Matthew Johnson constructs an historical sociology of space mining – from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity. The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the 'terrain' of political history, such as the tensions between states and markets, public law and private power, 'the commons' and exclusive property. The emerging cosmopolitics of off-world private property mirrors (and is often explicitly embedded within) neoliberal geopolitics, prompting urgent questions about how we can reaffirm principles of democracy and 'common

heritage' in the international laws of Earth and space. This book is compelling reading for anyone interested in the social study of space, law, economics, technology, politics and property rights.

wordpress development company in usa: Surveillance and Control in Israel/Palestine Elia Zureik, David Lyon, Yasmeeen Abu-Laban, 2010-12-13 Surveillance is always a means to an end, whether that end is influence, management or entitlement. This book examines the several layers of surveillance that control the Palestinian population in Israel and the Occupied Territories, showing how they operate, how well they work, how they are augmented, and how in the end their chief purpose is population control. Showing how what might be regarded as exceptional elsewhere is here regarded as the norm, the book looks not only at the political economy of surveillance and its technological and military dimensions, but also at the ordinary ways that Palestinians in Israel and the occupied territories are affected in their everyday lives. Written in a clear and accessible style by experts in the field, this book will have large appeal for academic faculty as well as graduate and senior undergraduate students in sociology, political science, international relations, surveillance studies and Middle East studies.

wordpress development company in usa: Judging Jewish Identity in the United States Annalise E. Glauz-Todrank, 2022-09-29 This book focuses on the first Supreme Court case to grant Jewish Americans race-based civil rights and highlights the complexity of White-perceived Jewish racialization in the United States. In 1982, vandals defaced Shaare Tefila Congregation in Silver Spring, Maryland, with Ku Klux Klan and neo-Nazi images and slogans. Because no religion-based statutes applied to the desecration, the synagogue's lawyers were required to utilize race-based statutes. In her close study of what became the 1987 case *Shaare Tefila Congregation v. Cobb*, Annalise Glauz-Todrank offers a nuanced analysis of the ways in which the members of the congregation, their lawyers, and the vandals' lawyers used the concepts of race and religion to argue their case. *Judging Jewish Identity in the United States* understands "race" and "religion" as White, Christian categories and illustrates how they have been accepted and internalized in the American environment. Glauz-Todrank examines how the judges went through a process of constructing the legal meaning of Jewish identity. Likewise, she narrates how the congregants responded to the vandalism, were relieved by the cleanup day that incorporated their neighbors, and pursued the case as "religious" Jewish Americans.
